ing English, First Aid, Home Nursing were attended by about 95 students, the Music Classes by 112 students and the Work room Classes for teaching Sewing, Embroidery, Knitting and Weaving by 156 women. Thus, the total number of pupils is 924 to-day. There are two branches of the Society started at Satara and Baranasi which are named after Lady Vithaldas Thakores, the wife of the greatest helper of the Society so far the late Sir Vithaldas D. Thakores. Besides there are branches started at Bombay (Dadar and Girgaum), Sholapur, Ahmednagar, Alibag, Nasik, Nagpur, Gwalior and Madras for either educational or medical work or for both. Thus the total number of women and girls including about 160 duplications of the rolls at these various Centres of the Society is over 1,000. There are in Poona six hostels three of which are located at the headquarters and the other three in the Baste's Path and the Sonawar Path for Nurses, etc., undergoing at the Sassoon Hospital. The number of resident students is above 260 in these six hostels. One of the three hostels at the headquarters is intended for women of depressed class. The number of these women at present is 7. In connection with the medical branch a Committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. Two fully qualified Nurses have so far been sent by the Society for the first graduate course in Public Health Nursing at Bedford College for women, London with the partial help of a scholarship of the League of Red Cross Society, Paris. There is an active Infant Welfare centre and ante-natal clinics with the average daily attendance of 50 expecting expectant mothers. The Society has extended its medical activities in Bombay by undertaking with the help of two charitable Trusts in Bombay to work out the scheme of Maternity, Infant Welfare Child Welfare and General Nursing for the women and children of the Bhatia Community under the supervision of Mr. G. K. Devadhar the organizer of the society. This scheme has a Maternity Hospital and Nursing Home, and three Infant Welfare centres. Besides, there are Maternity Hospitals and Nursing Homes at Ahmednagar, Alibag, Nasik and Sholapur under the management of the society in connection with other organizations. New Hon. Excellency the Countess of Irwin the Countess of Reading, Lady Wilson, Lady Lloyds, Lady Willington, Lady Sydenham and Lady Chelmsford are Hon. Patronesses. The institution is largely dependant upon public contributions and Government assistance. The annual expenditure of the whole organization now exceeds Rs. 2,50,000. President Shrimant Saubhagyaaji H. H. the Rajwade of Sangli, Honorary Organizer and General Secretary Mr. Gopal Krishna Devadhar, M.A., C.I.E., Local Secretary and Treasurer Mrs. Yashwanth Dhat, Lady Superintendent and Secretary for Development and Collections Mrs. Janakibai Bhat (Kaiser-i-Hind Silver Medal), Joint Lady Superintendents Mrs. Saralabai Nalk, M.A., and Miss Dwarkabai Dhat, B.A., B.T. Hon. Secretaries, Nursing and Medical Education Committee Rao Baladur

Dr P V Shikhar LM & S, Dr V C Gokhale, LM & S and Dr N J Ranade

Started on 30th April 1919 to promote the interests of the printing and litho presses and allied trades to bring about harmony and co-operation among press owners and proprietors and to take such steps as may be necessary in furtherance of the above objects

Office—Galwadi, Girgaum, Bombay 4
President—Shri Pandurang Javjee, J P
Secretary—Mr Manilal C Modi

RANGOON LITERARY SOCIETY—President H E the Governor of Burma *Lia Secretary* Mrs C Peacock 17 York Road

RECREATION CLUB INSTITUTE—This Institution was started in 1912-13 by the members of the Ismaili Dhamic (religious) Library in Bombay. Its central office is in Bombay with branches at Ahmedabad, Ahmednagar, Karachi Hyderabad (Sindh) Poona Warangal, etc. The aims and objects of the society are to elevate and improve the social, economic and spiritual condition of the depressed and poor classes of people and with that intent to found primary schools, associations and such departments and to take all constructive means to achieve the above objects. The Institute has 2 orphanages with 150 inmates, industrial works, domestic industries, sales depots, clubs, libraries, etc. It also issues two Anglo Vernacular papers, *The Ismaili* (a weekly) and *The Azari* (a monthly). *Hon Secretary*, Mr Hasan Lalji Devraj

ROYAL SOCIETY OF ARTS, INDIAN SECTION—This Society was founded in London in 1754. Its recently published history by Sir Henry Truman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857, a proposition was made by Mr Hyde Clarke, who wrote to the Council suggesting that "a special section be formed for India, another for Australia, one for English America and so on." It was suggested that the Indian Section should meet once a fortnight for the reading of papers. Nothing came of the suggestion until ten years later when Mr Hyde Clarke returned to England, and in 1868 he renewed his proposal, but only proposing the formation of a Committee which should organise conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr Hyde Clarke himself was placed on the Council, and the Indian Conferences, which soon developed into the Indian Section, were started. The Indian Section thus established became a most important department of the Society. It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most usefully take, and in England by giving similar information as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and

it has in return been of service to the Indian press in supplying useful information to it. It has been of great value to the Society itself as the means by which many members have been added to its list, so that in fact thanks to a very large extent to the work of the Indian Section and of the allied section for the Dominions and Colonies a large proportion of the present number of members come from the dependencies of the Empire abroad. *Secretary of the Society* G K Menon, *BA Secretary of the Indian and Dominions and Colonies Sections* W Lerry, *BA 108* (retired) 18 John Street, Adelphi London, W C 2

SERVANTS OF INDIA SOCIETY—The Servants of India Society founded by the late Hon Mr G K Gokhale in 1905 is a body of men who are pledged to devote all their lives to the service of the country on such allowances as the Society may be able to give. Its objects are to train national missionaries for the service of India and to promote by all constitutional means the interests of the Indian people. Its present strength is 21 Ordinary members, 2 members under training, 2 permanent assistants, 1 Attache and 3 probationers. The Society has its head quarters in Poona with branches at Madras, Bombay, Allahabad and Nagpur and other centres of work at Dohad in Gujarat, Mangalore and Calcutta in the Madras Presidency, Lucknow in U P, Lahore in the Punjab and Cuttack in Bihar and Orissa. The Society's work is primarily political, but as it believes in all round progress of the Indian people it has always laid equal emphasis on social, economic, educational, labour and depressed class activities and has worked in these fields. The political work is done through the legislatures, the non-official political organizations, deputations to foreign countries and propaganda. The Right Hon V S Srinivasa Sastry was in the old Imperial Legislative Council and in the now Council of State till 1924 and has to his credit many achievements. Pandit Hriday Nath Kunzru was a member of the U P Legislative Council and of the Legislative Assembly. He takes special interest in the questions of the Indianisation of Army public services, education and Indians overseas. Mr N M Joshi has been a nominated member of the Assembly since 1921 and has to his credit many a labour legislation. Mr N A Darda was for three years a member of the C P Council. Mr Joshi was a member of Bombay Municipal Corporation and Mr B. R. Bakhale a member of the Board of the Port of Bombay for a short period. Mr Kunzru has been the General Secretary of the National Liberal Federation of India, and Messrs Joshi, S P Andrews, Dube and K P Kaul are Secretaries of its Provincial branches and have all done the work of organising political conferences. Messrs Sastry and Kunzru were members of the Liberal Party's deputation to England during the Reforms period of 1919-20. Mr Sastry again toured some of the Dominions in 1921 on behalf of the Government of India to secure legitimate rights for Indians there, attended as India's representative the Assembly of the League of Nations and the Washington Naval Disarmament Conference.

went to England in 1923 as a Leader of the Kenya Deputation of the Indian Legislature, went in 1927 to South Africa as Agent-General of the Government of India under the now famous Cape Town Agreement for eighteen months and lastly went to Kenya in 1929 on behalf of Government to place the Kenya Indians' case before Sir Samuel Wilson. His achievements in South Africa are a marvel to the world and brought the White and Indian communities together. Mr Kunzru went in 1929 to Kenya to preside over the East African Congress and to England as the spokesman of the Kenya Indians to put their case before the British Government. Mr P Kodand Rao was in South Africa with Mr Sastri and in Kenya with Mr Kunzru and has mastered the question of Indians there. Mr Joshi was a member of the Nehru Committee which is the author of the now famous Nehru Report on Constitutional Reforms.

In the field of social economic and educational work, the Society's activities are equally varied. Some of its members are practically the founders of such institutions as the Poona Seva Sadan, Bombay and Madras Social Service League, the U. P. Seva Samiti, the Bhi. Seva Mandal catering for the needs and uplift of the aboriginal tribes in Gujarat. The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 girls and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, educational and welfare work for the mill workers in Bombay by starting Co-operative Societies, adult night and technical schools and conducting welfare centres. The Seva Samiti is an unique organisation in Upper India doing service to the pilgrims going to religious places such as Harwar and Benares and working in times of epidemics. Its Boy Scouts organisation is a well knit body recognised both by the public and Government. Mr Chittala conducts the Bhagini Samaj for social educational work among the Gujarati ladies. The Society has been conducting a model Depressed Class Mission in Mangalore and the Devadhar Malabar Reconstruction Trust activities at Calcutta. In the Co-operative movement the Society has done the pioneering work in the Bombay and Madras presidencies. During natural calamities such as floods, famines and epidemics, the Society has done relief work in every part of India. By its work in the Moplah rebellion the Society has become a household name in Malabar. Mr Sastri was for many years a member of the Madras University Senate. Mr Kunzru is a member of the Allahabad and Benares University Senates and Syndicates and Mr Dube a member of the Lucknow University Court and of the Lucknow District Local Board.

The Society has taken equally prominent part in various labour activities. Messrs Joshi and Bakhale have been General and Assistant Secretaries of the All India Trade Union Congress since 1925 and are greatly responsible for the shape given to the labour movement and for the organisational work particularly in Bombay. They have been President and General Secretary of the Bombay Textile Labour Union since 1926 and have conducted many Textile strikes. Mr

Joshi attended five times the International Labour Conference at Washington and Geneva as Indian Workers' Delegate and the British Commonwealth Labour Conference. In 1925 Mr Bakhale went to Europe in 1928 to attend on behalf of Indian labour the Geneva International Labour Conference, the British Commonwealth Labour Conference, the International Textile Worker's Congress, the Labour and Socialist International Congress and the British Trades Union Congress. He studied the Trade Union movement in Great Britain, Germany and Russia. Mr Parulekar and a few other members of the Society are doing similar labour work. Messrs Sastri and Joshi are members of the Royal Commission on Indian Labour.

The Society conducts three papers—The *Servants of India* an English weekly of which Mr S. G. Vase is Editor, the *Dnyan Prakash* the oldest Marathi daily of which Mr Limaye is the Editor and the *Hindustan* a weekly. Mr Parulekar conducts the *All India Trade Union Bulletin*. Mr K. G. Sivaraman the *Co-operative Bulletin* in Madras and Mr A. V. Patwardhan the *Sanskrit Samaja* Marathi weekly for the benefit of the subjects of Indian States. The Society has also published several pamphlets on public questions of the day.

The question of the subjects of the Indian States has also engaged the attention of the Society and some of its members, particularly Messrs A. V. Patwardhan and A. V. Thakkar are devoting a part of their energies for that work.

The Right Hon. V. S. Srinivasa Sastri P. C. C. is the President and Mr G. K. Devadhar M. A. C. S. is the Vice President and Mr P. Kodand Rao the Secretary. Messrs Sastri, Devadhar, Kunzru and Dardvi are senior members of the four branches. Mr Joshi is the Secretary of the Bombay Branch.

The Society is a non communal, non sectarian body which does not recognise any caste distinctions.

SEVA SADAN—The Seva Sadan Society was started on the 11th of July 1908 by the late Mr S. M. Malabari. It is the pioneer in Indian ladies society for training Indian sisters ministrant and serving (through them) the poor, the sick and the distressed. To spread its Gospel far and wide the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi Bombay. The Society maintains the following departments of work: (1) Home for the Homeless (2) Ashrams (Training Homes), (3) Marathi Normal Classes (4) Home Education Classes (5) Industrial Department including a work room, Sewing, Cutting, Bookery, Canvas work, Cookery, Fancy Embroidery and Artificial Flowers are among the chief industries taught. Total number of women in the different classes is nearly 450.
Secretary, Miss B. A. Engineer, M. A. LL.B. M.B.M., J.P.

CONSUMPTIVES HOME SOCIETY—This Society was started by the late Mr B. M. Malabari and Mr Dayaram Ghidmal on the 1st of June 1909. It was registered under Act XXI of 1860. Mr Malabari secured a large grant of land in a Himalayan pine

Forest in Dharampur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanatorium for consumptives. His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named The King Edward VII Sanatorium. The Sanatorium has its special water works known as the Lady Harding's Water Works presented by the late Sir (Lieut.) Madhavji Burt of Ahmedabad. The Sanatorium has a Guest House. The Nosliwan A'ini Guest House for visitors to Dharampur. It has accommodation for 90 patients including the special Punjab Work built from a grant of the Punjab Government and reserved for European patients. Most of the blocks and cottages are built by Parsis. The Sanatorium has its own dairy and is called the Dal Pirojhai R. H. Patuck Dairy. The Recreation Hall is called The Sir Brupinder Singh Recreation Hall after the name of the Maharaja of Patiala. Mr. Niketani collected an Endowment Fund of about Rs. 67,000 lodged with the Treasurer. Charitable Endowments, under Act VI of 1890. About Rs. 2,60,000 have been spent on laying out the site, buildings, etc. and the current annual expenditure is about Rs. 46,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The Office of this Society is situated at the Seva Sadan Buildings, Gandhi Bazaar, Mr. S. P. Wadia is the Hon. Secretary and Diwan Bahadur K. M. Jhaveri is the Hon. Treasurer.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA—Office and Homes at King's Circle, Matunga.

Founded—To prevent the public and private wrongs of children and the corruption of their morals, to take action for the enforcement of the laws for their protection, and, if necessary, to suggest new laws or amendments of the existing laws to provide and maintain an organization for these objects to promote education, and to do all other lawful things incidental or conducive to the attainment of the foregoing objects. Subscription for annual membership Rs. 10 for Life Membership, Rs. 100. **President**—Dr. Sir Tejpalji B. Nariman, Kt.

Honorary Secretaries Dr. Mrs. D. A. De Monte, and Mrs. R. P. Masani, **Hon. Treasurer** Khan Bahadur H. S. Kutrak.

THEOSOPHICAL EDUCATIONAL TRUST—This Society was established in 1913 and stands for the education of Indian boys and girls, in which the physical, emotional, intellectual and religious welfare are equally attended to. The general educational policy of the Trust is embodied in "Principles of Education" by Dr. Besant. The chief schools and colleges maintained are (1) Theosophical School and College at Adyar (Residential and Co-educational), (2) Theosophical College and High School at Madanapalli (Co-educational), (3) Theosophical School for Boys at Benares, (4) Theosophical College for Women at Benares. It is under contemplation to open a City Residential University at Madanapalli and apply for a charter. **President** Dr. Annie Besant, **Secretary** Mr. Iqbal Narsain Gurtu, M.L.C. **Mr. G. V. Subba**

Bro. Additional Secretary Treasurer Mr. A. Schwara (Headquarters are at Adyar).

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—Founded in 1919.—The Association was formed in pursuance of clause (b) of the Motion of the First Session of the All India Conference of the Moderate Party with a view—to do sustained work for the political progress and the moral and material welfare of the people to give expression from time to time to the considered opinion of the Party on matters of public interest, and to inform and educate public opinion in this Presidency in support of its views, policy and methods.

The objects of the Association are the attainment by constitutional means of full Dominion Status for India at the earliest possible date. For the promotion of these objects the Association shall adopt constitutional methods of agitation and work and shall foster a spirit of broadminded liberalism based on principles of liberty, equality and fraternity among the different classes and communities of the people. For the fulfilment of these objects the Association shall carry on educative and propagandist work by means of leaflets, pamphlets and other publications, (a) representations to Government, (c) meetings or conferences, lectures and all such methods as may be deemed practicable and expedient to educate public opinion, and (d) for advancing the interests of the Liberal Party by organizing and influencing elections to the legislatures (Central and Provincial, to Municipalities and District Local Boards).

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every two years.

President—Sir Chimanlal H. Setalvad, K.C.I.E., LL.D. **Vice-Presidents** The Hon. Sir Phiroze J. Mehta, Kt., C.S.I., and Sir Cowasji Jehangir (Jr.) K.C.I.E. **Hon. Secretaries**—Mr. Hazi Khabiruddin, Mr. J. R. B. Jeebhoy, Mr. D. G. Dalvi and Mr. A. D. Shroff. **Assistant Secretary**—Mr. V. R. Rande. **Office**—Alice Building, Ercaby Road, Fort, Bombay.

WOMEN'S INDIAN ASSOCIATION—This Association was started in Adyar, Madras, in 1917, with aims of service to women similar to those of the Seva Sadan in Bombay. It has 70 branches and over 3,000 members. It establishes classes, meeting places and regular lecture programmes for women in each of these branches. Each branch is autonomous and works according to the need of the locality. Classes are held to teach the vernacular, English needle-work—plain and fancy—first-aid, basket work, spinning, weaving and music and child welfare centres are conducted. Weekly lectures are given on subjects of general interest relating to women, such as health, education, religion, civic responsibilities, woman suffrage, etc. Though started entirely as an educational institution the movement for the Reform Bill proved that a most necessary part of work for the advancement of women was propaganda in support of woman suffrage. Accordingly the gaining of the vote for women was added to the objects of the Association and the Association

specialise on woman suffrage and the removal of sex disqualification from all franchise and candidature for local boards, municipal and legislative councils. Valuable work along these lines has been done by the Association as this is the only woman suffrage organization in India. The Association publishes a monthly magazine, *Stri-Dharma* edited by Shrimati Malini Patwardhan B.A. in English with Hindi, Tamil and Telugu articles. (Rs. 4 to non members, Rs. 2 to members). It is an all India Association. Its largest branch is in Bombay, its greatest number of branches in South India but yearly additional branches are being started in other provinces, and there are flourishing branches as far north as Kashmir and Lashkar. The prospects of rapid growth for the Association are very bright as it has been found that women everywhere welcome the self-development which the establishment of these branches brings. The Association is affiliated with the International Woman Suffrage Alliance and the International Women's League for Peace and Freedom.

Objects —

To present to women their responsibility as daughters of India.

To band women into groups for the purpose of self development, education, and the definite service of others.

To gain compulsory primary education for every boy and girl in India.

To secure the abolition of child marriage and child parenthood.

To help women to realize that the future of India lies largely in their hands, for as wives and mothers they have the task of training and guiding and forming the character of the future rulers of India.

To secure for women the vote for Municipal and Legislative Councils as it is or may be granted to men.

To secure for women the right to be elected as members on all Municipal and Legislative Councils.

Headquarters — Adyar Madras **President** — Dr Annie Besant, **Vice-President** — Dr Muthalakshmi M.C. **Mrs. Jinarajadasa Hon. General Secretary** — Mrs M. K. Cousins **Hon. Treasurer** — Shrimati Ammu Swaminathan

YOUNG MEN'S CHRISTIAN ASSOCIATION —

This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemisphere. The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men.

The Young Men's Christian Association though relatively new to India, is spreading rapidly. The local Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a National Council which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now over 60 Associations affiliated to the national union and many other village Associations with many thousands of members of all races and creeds. The following Associa-

tions own one or more buildings which serve as the local headquarters — Allahabad Bangalore, Alleppey Bombay Calcutta Calicut Coimbatore, Colombo, Calt, Hyderabad Jubbulpore, Kandy Karachi Kumbham Kulan Kottayam, Lahore Madras Nagpur Naloi Tal, Poona Raigoon Secunderabad Simla Ootacamund, Wellington Delhi Jaipur Madras Mysore Masapur Trivandrum like others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 107 specially trained full time Secretaries. A feature of the Y M C A in India is the international character of its Secretariat. It is made up of 14 Americans, 4 Canadians, 19 Englishmen, 2 Scotchmen, 1 Swiss, 2 Anglo-Indians, 1 Dane, 3 Australians and 60 Indians and Ceylonese.

The classes of people reached by the Indian Y M C A and the lines of service it attempts to do for them may be stated as follows — **Generally** — 1. Literature — Publication of original works and reprints. Four series.

Heritage of India, Religious Quot of India, Religious Life of India, Makers of Modern India.

2. Lecture Bureau — Many thousands of slides on a wide variety of educational and recreational topics serving a clientele in over 700 centres in India.

3. Physical — Training Physical Directors for schools and colleges, fostering playground movement, Olympics.

4. British Army Work in a number of centres and especially on the N.W. Frontier.

Boys — Scouting, Boys Clubs, Camps etc. **Students** — Hostels and Institutes in most University Centres.

Indian students in Britain — Specially in London, Edinburgh and Glasgow.

Citizens — (i.e., English educated Indians, Ceylonese and Burmese). Reading Rooms, Libraries, Lectures, Group Conferences, Study Circles handling many subjects of vital interest—social, intellectual and religious.

Soldiers — Institutes and Holiday Homes. **Anglo Indians** — Hostels, Institutes, Employment Bureaux.

Europeans — Hostels, Institutes, Employment Bureaux.

Labourers in Mills — Welfare Work.

Indians in Prison —

Rural Communities — Rural Reconstruction work embracing Co-operative Banking, Distribution, Cattle Insurance and Arbitration, Cottage Industries and Adult Education in four selected centres.

A monthly magazine the **YOUNG MEN OF INDIA** is issued at Rs. 5 per annum, incl. fr postage.

The work of the National Council (excluding that of the 170 local Y M C A's) called for a Budget of Rs. 2,04,480 in 1929. Of this sum Rs. 68,650 had to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The office is —

Patron — His Excellency the Rt Hon Baron Irwin of Killybegs, Underdale, P.O. G.O.B. 6012 Viceroy and Governor General of India

President of the National Council — The Most Rev Dr Foss Westcott, Metropolitan of India

General Secretary — K. T. Paul, O.B.E., B.A.

The Bombay Association now possesses four well equipped buildings — Warehouse Road, Lamington Road, Robach Street and Reynolds Road. The President is Mr W. H. Nelson, O.B.E., M.C., and the General Secretary is Mr W. H. Bryant, M.B.E. In connection with each branch there is a well managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting five centres serving mill workers, Municipal mental employees and Railway employees. A programme of education, lectures, physical culture, play and general uplift profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city which are financed by the Municipality. Three new centres will shortly open, two more for Municipal mental employees and one for the Port Trust families in Antop village.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON — This Association founded in the year 1875 was organised nationally in 1890. The aim of the Association is to promote the physical, intellectual, social and spiritual welfare of young women and girls in India, including European Anglo-Indian and Indian. This is done by the establishment of local branches in different centres. At present they number 76 in the big cities have a large membership including most classes of the community. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes, Bible Study, and devotional meetings, and meetings for social intercourse. Hostels are some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at

present, owns 21 including 8 holiday homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to holiday homes, Summer Conferences are held annually at Anandagiri, the Conference estate owned by the Association in Ootacamund and in the North Indian Centre. Special Girls Camps are arranged from time to time in many centres.

Travellers aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Houses in these centres. The Association also runs employment bureaux through the agency of which many girls find positions. The Commercial schools train girls for office and business life. These larger Associations are manned by a staff of trained secretaries some of whom come from Great Britain, America, Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year. The majority of the Indian branches are also carried on in this way. The Student Department is affiliated to the World Student Christian Federation and has 30 branches in the various Schools and Colleges.

The Association which is affiliated to the World's Young Women's Christian Association, is international and inter-denominational. Full membership is confined to members of the Christian Church, but Associate membership is open to any girl or woman of good character no matter what her religion may be. The National Headquarters are situated in Calcutta and business is conducted by the National Committee which has a representative membership in all parts of India, Burma and Ceylon.

The Patroness of the Association is H. E. Lady Irwin.

Copies of the annual reports and other printed matter can be obtained from the National Office which is at 11 Harrington Mansions, Calcutta. The official organ of the Association is the 'Woman's Outlook', an illustrated monthly magazine, which supplies women living in India with a good magazine at the price of Rs 2 0 0, post free per annum.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA

The Association of British University Women in India was established in 1913. Its objects are —

(1) To facilitate intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom,

by communication with the British Federation of University Women and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the

United Kingdom or hold Oxford or Cambridge Honours Certificates but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has four branches. The addresses of the Honorary Secretaries are as follows —

Hon. General Secretary — Mrs F J Kingelev
c/o P O B 636, Bombay

Honorary Local Secretaries

Bombay	Mrs Blair, Arthur House, Cooperage, Bombay
Calcutta	Hon. Secretary c/o Miss Cornelia Sorabji, 28 Chowringhee, Calcutta.
Dolbi	Mrs Blomfield, Anuriset Rd, Rajmura Dolbi
Punjab	Mrs Irving, 16, Davis Road, Lahore

The Dolbi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have for instance made investigation on behalf of the Education Department Government of India, the Calcutta University Commission etc and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organized public meeting for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of **Women's Employment Bureau** in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council, the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

Federation of University Women in India

This is an organization conceived to unite for service and fellowship all University Women of whatever race or University who may be resident in India. Units representing British Universities, Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now fused together into one body and are as such affiliated to the International Federation of University Women which embraces 51 countries of the world and has its headquarters at Grosvenor Hall, Cheyne Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit and the opportunities it affords for better understanding for world friendship, and world service, will easily be imagined.

As forming one family, its Members help the common cause of women. They help one another by inspiration and interchange of service; they help the country for which as individual Units they stand inasmuch as that country is swept forthwith by reason of its place within the International Federation alone into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of this Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

During 1920 these last have included Scholarships from Great Britain and America which gave free tuition, board and residence at certain colleges to students for a degree, residential scholarships at Grosvenor Hall, valuable fellowships and prizes offered chiefly for Medical or scientific research by Australia and America.

A special scholarship was offered in 1920 by Harvard College, Columbia University to under graduates from India.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit.

Subscriptions — British Unit Rs 3 a year
Indian Unit Rs 3 a year
American Unit Rs 2 a year

The Federation has Branches in Bombay, Calcutta, Lahore, Madras, Kodaikanal. Each Branch has its local Committee. But as a whole the Federation is under a Central Committee with Headquarters at Calcutta for the years 1928 and 1929. Headquarters are at Bombay for 1930-31.

OFFICE BEARERS, CENTRAL COMMITTEE

President — Miss McDougall

LOCAL REPRESENTATIVES

Bombay	Miss Phipper
	Miss Kanga
Calcutta	Miss Cornelia Sorabji
Punjab	Mrs Skemp
	Miss /utsi
Madras	Miss P. Sethia

Honorary General Secretary, Mrs Doctor,
Hijl Mansions Bombay

Applications for membership should be made to the Honorary General Secretary who will forward the same to the Local Secretary to whose Unit it may appertain.

The Church.

The Church of England in India became on March 1 1839 a self governing branch of the Anglican Communion. Until that date it had been an integral part of the Church of England and its bishops were considered to be suffragans of the Archbishop of Canterbury. This legal bond was severed by the passing of the Indian Church Act and Measure in 1927 and from the date of severance appointed under the Act the Church of India Burma and Ceylon has been free to manage its own affairs although as it states in the Preamble to its Constitution it has no intention or desire to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity.

Like all the other branches of the Anglican communion the Church of India Burma and Ceylon is Episcopal. It is composed of fourteen sees: Calcutta Madras Bombay Colombo Lahore Rangoon Travancore and Cochin Chota Nagpur Lucknow Tinnevely and Madras Nagpur Dornakal Assam and Nashik. Of these the first to be created was Calcutta in 1814 and the last was Nashik in 1930. Vacancies on the Episcopal Bench are filled by election each diocese electing its own bishop. The bishops rule the church and to them is reserved the final word in all matters of faith and order, but they rule in conjunction with a system of Councils which, has been framed so as to give the greatest possible amount of representation to the whole body of the faithful. The foundation of the system is the **Parochial Council** of which the Parish Priest is the convener and chairman. Every baptised, and confirmed member of the Church residing in the parochial area who contributes in some recognised way, to the financial support of the Church is a member of the Parochial Council of the ecclesiastical area in which he resides and is called a Qualified Elector.

Above the Parochial Councils come the **Diocesan Councils**. All Priests holding the Bishop's license are members of the Diocesan Council and to it are sent Lay Representatives elected by the Qualified Electors of every Parochial Council. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are held not less than every three years and usually at Calcutta. They consist of three Houses, Bishops, Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected representatives of the Diocesan Councils. The three Houses usually sit and vote together but any House has the right to meet alone if it desires to do so in order to formulate its policy or classify its opinions. A Canon of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses. In all questions

touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone without the concurrence of the other Houses can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Every priest before being licensed to work in the Church of India Burma and Ceylon takes an oath of obedience to the Canons.

The Ecclesiastical Establishment—At the time of the passing of the Indian Church Act and Measure the Government of India acknowledged that it was responsible for providing for the spiritual needs of the Soldiers and Civilians whom it brought out to India. These responsibilities it discharges by maintaining an establishment of chaplains and churches for the four principal denominations of Christians—Anglican, Presbyterian, Roman Catholic and the Free Churches. The Chaplains of the two first named groups are appointed by the Secretary of State for India the Anglicans on the recommendation of a Selection Committee of which the Archbishop of Canterbury is the Chairman. They are paid by Government and pensioned after a convenient period of service. Although they form a definite Department of Government they are not subject to the orders of anyone save their own ecclesiastical superiors. The Presbyterian Chaplains are sometimes appointed to stations and sometimes to regiments. The Anglican chaplains are always chaplains of stations and have the pastoral care of all the inhabitants of the station who do not deliberately withdraw themselves from their ministrations but when troops are included in the number of their parishioners Government orders that they shall have the first claim on their services. The chaplains and their congregations are members of the Church of India Burma and Ceylon during their residence in India and have full rights of representation in the Councils of the Church. Their right to the use in worship of the Prayer Book of the Church of England is not only acknowledged in the Constitution of the Church but is also safeguarded by clauses in the Indian Church Act.

Government gives to the Metropolitan an annual block grant which is divided between the seven bishops whom Government recognises as having jurisdiction over the Establishment Chaplains and their congregations. These are the Bishops of Calcutta, Madras Bombay, Lahore Lucknow Rangoon and Nagpur. Before 1920 they formed part of the Establishment. One of the difficulties which the Church is facing is that the Government Block Grant is not large enough to provide for all the needs of these bishops. In consequence the Church is struggling to raise Diocesan Endowment funds to make up deficits. More serious still however, is the situation brought about by the action of Government in 1924 when in pursuance of a general policy of economy necessitated by post war conditions it cut down the number of its chaplains by sixty. This

at the diocese a very difficult task. It became necessary suddenly to provide the salaries of Diocesan Chaplains and to furnish funds for the upkeep of the churches of many civil stations previously maintained by Government. Realising the magnitude of this burden, Government agreed to help for a period of seven years by means of a very generous *Block Grant*. The question of the continuance of this grant is to be reconsidered in 1931. If the grant is considerably reduced the situation in most dioceses will be very serious. Either the Church must raise and devote to its European work a greatly increased sum of money or many of the churches in up-country stations will have to be closed. The latter alternative will be the Anglo-Indian and Donnicelled community which on account of indubitation is less able than ever to carry the burden which it means must inevitably be laid upon it. The difficulty of raising funds for the education of the children of this community and of obtaining priests to work for it becomes greater year by year. Nevertheless the Donnicelled Community is the backbone of the Church in India and it is through this community that the conversion of India must come.

The Churches in India have not been wholly blind to these facts and have made desperate attempts to cope with the needs of the community in spite of lack of real support from home. The education of its children is very largely in the hands of the Christian denominations. Though there are a few institutions such as the La Martiniere schools, on a non-denominational basis, but they are exceptional. In all the large cities there exist schools of various grades as well as orphanages for the education of Europeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire, and they maintain a high standard of efficiency. The Anglican Church comes next and the American Methodists have established some excellent schools in the larger hill stations. The Presbyterians are also well represented in this field, particularly by the admirable institution for destitute children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants in aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions.

The tradition that St. Thomas the Apostle, was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so-called Syrian Church in south-west India has had a continuous life. Except in its fancy this Church (or rather these Churches or the Syrian Christians are now divided into

four communions) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into India by the Portuguese who established their hierarchy throughout their sphere of influence, Goa being the metropolitan see of the Indies. St. Francis Xavier a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the Propaganda in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,825,000, of whom 332,400 were added during the decade 1911-1921. The total of 'Syrian' Christians (exclusive of those who while using the Syrian liturgy are of the Roman obedience) is 315,000 as against 367,000 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 2,390,000 an increase of 547,000 since 1911. Thus, the total number of Christians of all denominations in India is now close on five millions. In fact it probably exceeds that figure at the present moment as these statistics are taken from the Census Report of 1911 and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till 1813. They have thus been at work in the Indian mission field for over 110 years, and the statistical results of their efforts are given above. It is now, however, generally recognised that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffuse influence of Christianity is the missionary school and college. The Protestant missions fill a considerable part in the elementary education of the country. According to the 1923 Report of the National Christian Council for India they are teaching 420,255 children in 12,698 elementary schools mostly situated in villages. The majority (243,895) of children in these schools are non-Christians. The same is true also of the secondary schools and in a still greater degree of the colleges. The former number 523 with 70,254 male and 25,303 female pupils. There are 40 colleges affiliated to Universities, containing 20,062 male and 1,800 female students. Of these as many as 14,748 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes and the higher educational ideals maintained by their staffs. The principal University colleges under Protestant auspices are the Madras Christian College, the Duff College, Calcutta, the Wilson College, Bombay, the Forman College, Lahore, and three women's colleges—the Women's Christian College at Madras, the Isabella Thoburn College at Lucknow, and the Women's Christian Medical College

at Ludhiana. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts but compared with Hindus and Mahomedans it is conspicuous. In India the Roman Catholics have some 1,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures however, include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent but producing even more widespread results is the philanthropic work of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. Hospitals and dispensaries have sprung up in all parts of the mission field, and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the Salvation Army hold a prominent place, and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public and such movements as 'The Servants of India' and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much more acutely than Europeans the sound and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognised to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great divid-

ing line is that between Christ and Mahomed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of confession and order which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India. In South India it has already resulted in the formation of the South India United Church which is a group union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S. I. U. C. is at present negotiating with the Anglican Church. If as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the Roman Catholics, on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the historic Episcopate it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies

The Church Missionary Society carries on work in India in seven different missions—the United Provinces South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore, but it also has important medical missions, especially on the N-W Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European lay women 258. The Society claims a Christian community of 2,21,369 of whom 68,665 are adult communicants.

Society for the propagation of the Gospel.—Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed in many cases manned by the S. P. G., are entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and Feroz College. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and

several parts of South India, especially in the Diocese of Travancore and Cochin. The S. P. G. also maintains an important Criminal Tribes Settlement at Hubli in the Bombay Carnatic. There are 110,000 Indian Christians under the aegis of the S. P. G. 90 ordained European missionaries and 98 European lay workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1850. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society and 16 sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Asiaphany* which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona and small stations in the Bombay Conkan. In Bombay its missionary work centres upon the Church of Holy Cross, Unmarked, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All Saints Sisters. Other Anglican sisterhoods represented in India are the Clerkenwell Sisters at Calcutta and the Sisters of the Church

(Kilburn) at Madras. The St. Hilda's Deaconesses Association of Lahore carries on important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Kalampong (Punjab) should also be mentioned under the head of Anglican Missions.

An interesting development has lately taken place in the Anglican communion. In 1922 the foundations were laid of a new Religious community called the Christa Seva Sangh or the Society of the Servants of Christ. The aim of its members is to enable Indians and Europeans to live together a common life based upon the three-fold vows of poverty, chastity and obedience and by living together to develop the Religious life along lines particularly suited to India. Indians appreciate fully the value of renunciation. The Sangh hopes to commend Christianity to India by presenting it with a concrete illustration of Christian asceticism. The first Ashram of the Brotherhood was consecrated by Dr. Palmer Bishop of Bombay in 1923. It is situated in Jona and it contained at the time of consecration 13 Brothers, of whom 6 were Indians and 7 Europeans. It shows every sign of life and growth.

THE ROMAN CATHOLIC CHURCH

With regard to numbers, the *Catholic Directory of India, 1924*, gives the following tables —

	1901	1911	1921
1 <i>British India and Indian States—</i>			
(a) Latin Rite	1 312 224	1 614 020	1,851 408
(b) Syrian Rite	375 928	364 660	440,488
2 <i>French India</i>	27,850	26 018	25,480
3 <i>Portuguese India</i>	262,650	366 148	388,741
Total, India	1,976 656	2 801 846	2 606 117
4 <i>Ceylon</i>	285,018	322 163	363,986
Total India and Ceylon	2 261 674	3 023 559	2 970 103

NOTE (1) — In 1860 the total for India and Ceylon was 1,170,844. In 1880 it had risen to 1,610,267, and in 1900 to 2,261,674.

NOTE (2) — In 1926 the total for India and Ceylon has been worked out at \$241,744 showing an increase of quarter of a million in five years.

NOTE (3) — The number of Catholics under the Portuguese Jurisdiction in 1921 were reckoned at 604,802 of whom more than half were in British India.

NOTE (4) — In 1860 there were 1,804 priests. In 1921 there were 3,158.

The Catholic community as thus existing is composed of the following elements —

(1) The Syrian Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St Thomas. They were brought under allegiance to the Pope by the Portuguese in 1500 and placed first under Jesuit bishops and then under Carmelite Vicars Apostolic. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syrian rite.

(2) Converts of the Portuguese missionaries from 1600 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.

(3) European immigrants at all times, including British troops.

(4) Modern converts from Hinduism and Islamism in recent mission centres.

The Portuguese mission enterprise starting after 1600, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886. At the same time the whole country was placed under a regular hierarchy which after subsequent adjustments now stands as follows —

Of the Portuguese Jurisdiction —

The archbishopric of Goa (having some extension into British territory) with suffragan bishoprics at Cochin and Mysapore (both in British territory).

Of the Propaganda Jurisdiction —

The archbishopric of Agra with suffragan bishoprics of Allahabad and Ajmere.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly, and Tuticorin.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur and Patna and the Prefecture Apostolic of Assam.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatnam and Nagpur.

The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysoor, Coimbatore and Kumbakonam.

The archbishopric of Shimla with suffragan bishopric of Lahore and the Prefecture Apostolic of Kashmir.

The archbishopric of Colombo (Ceylon) with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

The archbishopric of Verapoly with suffragan bishopric of Quilon.

One archbishopric and three bishoprics of the Syrian rite for the Syrian Christians of Malabar.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

Propaganda changes —

New dioceses formed — Tuticorin by division of Trichinopoly, Calcut by division of Mangalore. Chittagong by division of Dacca. Dinajpur by division of Krishnagar. Ranchi by division of Calcutta. Separate missions have been established at Catick, Bellary and Jubbulpore.

Padroado changes —

In May 1908 an agreement was made between the Holy See and Portugal to modify the arrangements of the Concordat of 1886. The diocese of Damaun is merged in the Archdiocese of Bombay and a complete readjustment has taken place in relation to Mysapore and Madras the main object being to obliterate 'double jurisdiction'.

The European clergy engaged in India almost all belong to religious orders congregations or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,000 besides which there is a body of secular clergy mostly native to the

country, numbering about 2,000 and probably about 2,000 nuns. The first work of the clergy is parochial administration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people, their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College Madras teaching university courses besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 112,061 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Cocha Nagpur, Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be

mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplains are derived mainly from Europe, that is, from the collections of the Society for the Propagation of the Faith and of the Holy Childhood, helped out by private or other donations secured from home by the differential missionaries. In mission work the fathers count as enrolled only those who are baptized and persevering as Christians, and no baptism except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is usually represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Edward Mooney, D.D. appointed in 1926.

THE CHURCH OF SCOTLAND

The Church of Scotland and the United Free Church have become one. The Union effected in October 1929 has already exerted a profound influence upon the life of the Church of Scotland in India. The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organized a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated. Calcutta 1914, Bombay, 1919, Madras, 1921. Since 1903 there have been eighteen chaplains on the staff of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built in all considerable military stations, e.g., Chakrata, Lucknow, Feshawar, Ranikhet, Rawalpindi, Nalhot, Umballa and Jubbulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Mhow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Balakot, Murree, Dalhousie and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1929 when Alexander Duff, one of the greatest of modern missionaries, was

sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1919 and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptized Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptized Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and sanatorium work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Its two Churches in Bombay have six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregations support the school for poor children. The *Arya Samaj* Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simla. The now well-known St.

Andrew's Colonial Homes at Kalampong, Bengal, though not directly part of the work of the Church of Scotland were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Report of the Scheme of the Church of Scotland Blackwood & Sons" "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

Though the former Churches of the United Free Church now belong to the Church of Scotland they remain independent of the establishment recognised by Government. They have only three purely European congregations in India, two in Calcutta, and one in Bombay.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalka and Chinnai), the Bengal Parganas, with five stations Western India (Bombay, Poona and Allahabad), Hyderabad State (Jaina, Bethel and Farhan), Madras (Madras City, Chingleput, Srirambudur and Conjeevaram), the Central Provinces (Nagpur

Bhandara, Wardha, and Amroli), Rajputana, where the extensive work instituted by the United Presbyterian Church in 1860 is now carried on from eleven centres.

The work falls into three main divisions: evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is well known. The Madras Christian College, which owes so much to the work of Dr William Miller, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay and Hilslop College, Nagpur.

BAPTIST SOCIETIES

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN—Formed in 1792, largely through the efforts of Dr Wm Carey, operates mainly in Bengal, Bihar and Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 216 missionaries and about 1,075 Indian and Singhalese workers. Connected with the Society are 345 Indian and Singhalese Churches, 245 Primary Day Schools, 28 Middle and High Schools and 4 Theological Training Colleges. The Church membership at the close of 1925 stood at 20,740, and the Christian community at 57,858. The membership during the past ten years has increased by about 53 per cent, and the community by 80 per cent. In the same period amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack and Delhi, where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Majesty in 1827, confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in

1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, Arts and Theological. It was affiliated in 1867 to the newly formed Calcutta University reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the College. In Arts, the College prepares for the Calcutta Arts Examinations. Principal Rev G H C Angus, M.A., B.D.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 6 Hospitals, and 8 Dispensaries. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretary of the Mission is the Rev D Scott Wells, M.A., Ripon Street, Calcutta.

The Headquarters of the Mission are at 19, Farnham Street, Holborn, London. The total expenditure of the Society for 1929 amounted to £1,98,080.

THE CANADIAN BAPTIST MISSION—Was commenced in 1873, and is located in the Telugu country to the north of Madras in the Kistna, Godavari, Visagapatnam and Ganjam Districts. There are 23 stations and 420 out stations with a staff of 108 missionaries including 8 qualified physicians, and 21,95 Indian workers with Gospel preaching in 1,356 villages. Organised Churches number 108 communicants 21,601 adherents 21,245 for the past year. Twenty-four Churches are entirely self-supporting in the educational department are 515 village day schools, with 17,300 children 13 boarding schools, 2 High schools a Normal Training school, a Bible Training School for Women a Theological Seminary providing in all for 1,000 pupils and an Industrial school. There are 6 Hospitals, two leper asylums and an Orphanage. The Mission publishes a Telugu newspaper Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 61 per cent., the Christian community by 40 per cent., and scholars by 75 per cent. Indian Secretary is the Rev A. Arthur Scott, Tuni, East Godavari.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814 has Missions in Burma begun 1814, Assam 1836, Bengal and Orissa 1836, South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma 13 in Assam 10 in Bengal Orissa 29 in South India besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-Women, and extends to many races and languages, the most important of which in Burma has been the practical transformation of the Karens whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages and large efforts are made amongst the employees of the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

Last year the field staff numbered 314 missionaries, 7,064 Native workers. There were 1,892 Churches of which 1,272 were self-supporting. Church members number 1,27,828. In the 2,107 Sunday Schools were enrolled 9,60,000 pupils. The Mission conducted 2,741 schools of all grades with 91,091 students enrolled. 14 Hospitals and 34 Dispensaries treated 6,364 in patients and 1,05,879 out-patients. Indian Christians contributed over Rs. 6,74,000 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION was opened in 1836 and has 13 main stations staffed by about 45 missionaries. There are 725 Native workers, 384 organised churches 87,140 baptised members, 318 Schools of all grades including 1 High 2 Normal 2 Bible and 13 Bible schools. 8 Hospitals and 8 Dispensaries treated 326 in patients and 18,032 out-patients during the year. Mission work is carried on in 9 different languages.

Secretary Miss Marian Burnham Gauhati Assam.

AMERICAN BAPTIST BENGAL-ORISSA MISSION commenced in 1836. Area of operation Midnapore district of Lower Bengal, Balasore district of Orissa and Janshedpur Mission staff 39 Indian workers 323. Two English Churches and 27 Vernacular Churches, Christian Community 5,000. Two Dispensaries Education of One Theological and two Boys' High Schools and two Girls High Schools and 118 Elementary Schools, pupils 8,600. One Industrial School for carpentering iron work and motor mechanics. The Vernacular Press of this mission printed the first literature in the Santal language.

Secretary Rev H I Frost Balasore Orissa.

THE AMERICAN BAPTIST TELUGU MISSION—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna and Kurnool Districts, parts of the Decan and an important work in Madras and the surrounding vicinity. Its main work is evangelism but there are also Educational and Medical Institutions of importance, Industrial Settlement work for the Erukales is carried on at Kavali and vicinity. Industrial departments are maintained also in connection with the Mission. High Schools at Nellore, Ongole and Kurnool. Organized Telugu Churches number 277, with 94,410 baptised communicants. There are 102 missionaries, and 2,720 Indian workers. The Mission maintains a Theological Seminary at Rumupatnam for the training of Indian preachers. A Bible Training School for the training of Telugu women is located in Nellore. A total of 33,923 receive instruction in 1,270 primary schools, 16 secondary schools and 4 high schools. In Medical work 8 Hospitals and 12 Dispensaries report 4,803 in patients 95,108 out-patients, and 11,073 treatments during the year.

Secretary Rev F Kurtz, D.D., Madras, Decan.

THE AUSTRALIAN BAPTIST MISSION—Missionary-in-charge Rev T C Kelly (on leave) Rev A E Smith (acting), Mission House Berajunge.

THE AUSTRALIAN BAPTIST FOREIGN MISSION—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 42 Australian workers. There are 2,703 communicants and a Christian community of 4,986.

Secretary Field Council Rev A J Grace Palua E B.

THE STRICT BAPTIST MISSION—Has 15 European Missionaries, and 120 Indian workers in Madras, and Salem District. Communicants number 270, organised Churches 8, elementary schools 41, with 1,635 pupils.

Treasurer and Secretary Rev D Morling Nampal, S India.

PRESBYTERIAN SOCIETIES

THE IRISH PRESBYTERIAN CHURCH MISSION—Operates in Gujarat and Kathiawar with a staff of 35 Missionaries of whom 10 are clerical, 14 Educationalists 8 are Doctors and 3 Nurses. The Indian staff numbers 498, of whom 14 are Pastors, 93 Evangelists, 4 Colporteurs 40 Bible women, and 342 are Teachers. There are 12 Organised Churches a communicant roll of 1,925 and a Christian Community of 7,289. In Medical work there are 3 Hospitals and several Dispensaries with 1,404 in patients 13,769 new cases and a total attendance of 61,501. The Mission conducts 3 High Schools, 2 Anglo Vernacular Schools 1 Preparatory School at Parantij and 124 Vernacular schools affording tuition for 6,884 pupils also 1 crèche 4 Orphanages an Industrial School at Borwad a Teachers Training College for Women at Borwad a Divinity College at Ahmedabad and a Mission Press at Surat. The Mission has made a speciality of Farm Colonies of which there are about a score in connection with it most of them thriving.

The Jungle Tribes Mission with 6 Missionaries is a branch of the activities of the above working in the Panch Mahals and Rewa Kantha districts with Farm Colonies attached.

Secretary Rev James Broly, B.A., Parantij

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA—The Sialkot Mission of the above Church was opened at Sialkot, Punjab, in 1856. It is now carrying on work in ten districts in the Punjab and in one district of the North West Frontier Province. Its missionaries number 140 and its Indian workers 830. Its educational work comprises one Theological Seminary one College, five High Schools, one Industrial School eight Middle Schools, and 151 Primary Schools. The total enrolment in all schools in 1928 was 13,721. The Mission is also carrying on Medical work through five Hospitals and eight Dispensaries. The total membership of the Church which has been established is 43,070 and of the Christian community 88,808.

General Secretary Rev Robert Maxwell Gujranwala, Punjab

THE AMERICAN PRESBYTERIAN MISSION operates in 3 main sections known as the Punjab North India and Western India Missions. The American Staff (including women) numbers 268 and the Indian Staff 1,352. There are 35 main stations and about 210 out-stations. Organized churches number 83, 25 of which are self-supporting. There are 11,985 communicants and a total baptised community of 82,000. Educational work as follows: 2 Men's Colleges and an interest in the Isabella Thoburn and the Kincaid Colleges for women, students 1,820 Theological School 1, students 24, Training Schools for village workers 2, students about 180, High Schools 14, students about 2,100, Industrial Schools 4 Agricultural Demonstration Farms 3, Teachers Training Departments 7, The Miraj Medical School and an interest in the Ludhiana Medical School for women, students 170, Elementary Schools 230 Schools of all grades 241, pupils 12,478, Medical work Hospitals 6, Dispensaries 17 Sunday Schools

371 with 13,491 pupils. Contributions for Church and Evangelistic work on the part of the Indian Church Rs 51,423.

The Hospital at Miraj founded by Sir William Wankless and now under the care of C.E. Vail, is well known throughout the whole of S.W. India, and the Forman Christian College at Lahore under the principalship of Rev E.D. Lucas, D.D. is equally well known and valued in the Punjab. The Ewing Christian College (Dr C.H. Rieu, Principal) has grown rapidly in numbers and influence.

CONGREGATIONAL SOCIETIES

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS—Has two large Missions, the American Marathi Mission and the Madura Mission. The Marathi Mission covers a considerable part of the Bombay Presidency, with centres at Bombay, Ahmednagar, Satara and Sholapur. It was commenced in 1813, the first American Mission in India. Its activities are large and varied. The staff at the beginning of 1931 consisted of 43 missionaries and 619 Indian workers operating in 8 Stations and 121 out-stations exclusive of Bombay City. Organised Churches number 68 with 7,539 communicants, and 6,145 adherents. There is a Leprosy work at Sholapur. The Educational work embraces 14 training and secondary schools with 1,182 pupils and 121 primary schools, with 5,951 pupils, three-fifths of whom are non-Christians. Zensana work and Industrial work are vigorously carried on, the latter embracing carpentry and lace work. A school for the blind is conducted on both Educational and Industrial lines. 53,751 Patients were treated in the Hospitals and dispensaries of the Mission last year. This Mission was the first to translate the Christian scriptures into the Marathi tongue. At Sholapur, a settlement for Criminal Tribes is carried on under the supervision of Government. **Secretary** Rev William Hazen, M.A., Sholapur.

THE MADURA MISSION—In the south of the Presidency founded in 1834, has a staff of 61 missionaries and 992 Indian workers, operates in the Madura and Ramanad Districts and has a communicant roll of 11,746 and a total Christian community of 30,158 and 38 organized Churches most of which are entirely self-supporting and self-governing. These Churches are an integral part of the South India United Church. Schools number 339 with 17,548 pupils. In Madura there are a First Grade College, High and Training schools for girls and hospitals for men and women. At Pudukottai, three miles from Madura, a High School Training School, Theological Institution, Trade School and School of Agriculture. Five elementary Boarding Schools are found in as many out-stations. Industrial work is increasingly a part of the curricula of all schools above the lower grade. The **Secretary** is the Rev John J. Bannings, M.A. D.D., Pudukottai.

THE ARCOOT MISSION commenced under the American Board was transferred to the Reform Church of America in 1851.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA—Embraces two Branches, one in Bengal and the other in Khandesh. The mission staff in Khandesh is represented by fourteen missionaries and forty Indian workers. There are 164 communicants and 68 non-communicants and 409 under Christian instruction, 15 Elementary Schools provide for 393 pupils.

Secretaries Rev Paul Ringdahl, Amalner, East Khandesh, and Rev Dover, Bakshi Dwar, Bengal.
THE SWEDISH ALLIANCE MISSION—Working among Hindu, Muslim and Mohammedans in West Khandesh has 30 missionaries and 71 Indian workers. There are 8 congregations with a total membership of 942 of whom 435 are communicants. There are 8 Elementary Schools, 2 Training Schools and 5 School Homes. The pupils in all schools are 380.

Secretary Rev Gustaf Westmo, Dhulia, West Khandesh.

FINE CHURCH OF FINLAND MISSION—Total Mission staff is represented by 6 Missionaries, 1 native Pastor, two Catechists, 7 Teachers. There are about 180 communicants and total community 400. There are four day schools, one evening school, one hospital, four dispensaries, and Weaving and Hand-Carpet Industries.

Secretary Miss E. Kronquist, Lachon, via Gangtok, Sikkim State.

THE LONDON MISSIONARY SOCIETY—Commenced work in India in 1798 and occupies 3 centres in N India, 12 in S India and 7 in Travancore. The Mission engages in every form of Missionary activity.

The European staff numbers 135, Indian workers 2,380, Organised Churches 520, Communicants 21,824 and Christian Community 142,255. There are 1 Christian College, students 159, 2 Theological Institutions, students 70, 4 Training Institutions, pupils, 114, 12 high schools, pupils 4,849, 25 Boarding schools, scholars, 1,167 and 862 Elementary schools with 46,371 scholars. In medical work Hospitals number 6, Dispensaries 14, qualified doctors 9 Europeans, 61 Assistants and 5,880 in patients and 198,767 outpatients for the year.

The main centre of the Mission in N India are at Calcutta and Murahidabad. L.M.S. work in the United Province is being closed but a Union Mission of the W.M.B., C.M.S. and I.M.S. is shortly to be opened in Benares City with the Rev J.C. Jackson of the I.M.S. as Superintendent. This Mission will concentrate especially on work amongst pilgrims and students. Special efforts are made amongst the Nama Sndras and the aboriginal tribes known as the Majhwara, Cheros and Pankas. The S. India district and Travancore

are divided into the Kanarese, Telugu, Tamil, and Malayalam fields with 19 stations and 800 out stations. At Nagercoil (Travancore) is the Scott Memorial College with 985 students, a Church and congregation said to be the largest in India, and a large Printing Press, the centre of the S. Travancore Tract Society.

Bengal Secretary: Rev. Vaughan Rees, Behrampore, Dist. Murahidabad. Benares Superintendent: Rev. J.C. Jackson, Benares U.P.

ALL-INDIA MISSIONS

THE CHRISTIAN AND MISSIONARY ALLIANCE—Dates from the year 1893 under the name of the International Missionary Alliance, but a number of its missionaries were at work in Berar Province much earlier. THE INDIAN MISSIONARY SOCIETY OF TIRUVELLY (DORNAXAL MISSION)—Opened in 1904

operates in the Warangal District of the Nizam's Dominions as well as among the hill tribes called Paltars in the British and Travancore Hills. It is the missionary effort of the Tamil Christians of Tinnevely. There are now nearly 5,403 Telugu Christians in 122 villages and 360 Paltar Christians in the hills. *Secretary* Rev S. A. Moses, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874 is an inter-denominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children working in 10 countries but largely in India, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India alone the Mission now has 37 Asylums of its own with upwards of 5,500 inmates and is aiding or has some connection with work for lepers at 24 other places in India. Altogether in India over 7,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 760 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases both adults and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India, but the bulk of the money expended by the Mission in India is received from Britain although the provincial Government give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers of which H. E. Lady Sykes, who represents the Bombay Presidency, is a Vice President.

Hon. Treasurer Henry F. Lewis, Esq., 12, Dalhousie Sq., Calcutta.

The General Secretary of the Mission is Mr. W. H. P. Anderson, 33 Hicricetta St. Covent Garden, London, W.C. The Secretary for India is Mr. A. Donald Miller, Furlah, Bihar.

There are elementary schools with three orphanages, two boys and one girl, and a Widows' Home, where industrial training is given. There are four main stations—At Dhond, in the Poona District and at Bahawalpur and Benares in United Provinces. At Benares there is an Industrial Training Institution with about one hundred attendants learning the Motor Electrical and Carpentry trades. There are also 34 out-stations. Director: Rev John E Norton, Ahmed, Poona District. Secretary: W E Norton, Benares, U P.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION—This is an inter-denominational society, with headquarters, 38, Surrey Street, London, working among women and girls in six stations in the Bombay Presidency, 10 in United Provinces, and 3 in the Punjab. There are 75 European

Missionary ladies on the staff and 37 Assistant Missionaries, 214 Indian teachers and nurses and 49 Bible women. During 1927 there were 4 618 in patients in the five hospitals supported by the Society (Nasik, Poona, Jaunpur, Lucknow and Patna), but the Victoria Hospital Benares, was closed. There were 26,941 out patients, 81,082 attendances at the Dispensaries. In their 33 schools were 3,022 pupils, and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching of women in Zenanas. 1 207 women were regularly taught and 1 324 houses were visited. The 17 Bible women visited 439 villages, the number of houses was 847, major operations 712, minor operations 714, total expenditure £ 60 427 9 8.

Hon. Treasurer: The Lord Meston of Dunottar.

Secretaries: Rev Dr Carter, Rev E S Carr, M A (Hon.), and Miss E Martin.

WOMEN'S CHRISTIAN MEDICAL COLLEGE, WITH WHICH IS INCORPORATED THE PUNJAB MEDICAL SCHOOL FOR WOMEN—In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influences to Indian Women. Doctor Edith Brown M.A. M.D. was its founder and Principal. The School was inter-denominational, and trained students for various Missionary Societies.

Clinical work was at first given at the Charlotte Hospital which belonged to the Lutheran Zenana and Medical Mission. The Memorial Hospital was opened in 1900 and has now 200 beds. In 1913 non-Christian Students were also admitted for training and the name was modified to its present title given above.

In 36 years 202 Medical Students have qualified as doctors, besides 120 as Compounders, 142 as Nurses and 170 as Dais and Midwives.

At present 252 are in training—106 as Medical Students, 10 as Compounders, 50 as Nurses and 80 as Nurse Dais.

New laboratories have been built for Clinical Pathology for Physiology and for Chemistry and Physics. New quarters for Sisters and Nurses and this year also new quarters for the Assistant Staff. The new Dispensary for out patients has now become very popular.

THE MISSIONARY SETTLEMENT FOR UNPUNJAB WOMEN was founded in Bombay in 1890. Its work is religious, social and international. The Settlement supplies a hostel for University students of all nationalities and a few Indian professional women. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part in many of the organized activities for women's work in the city. The Social Service Training Class under Miss Tara Tiliak B.A., is now held at the Settlement. The course lasting a year includes both theoretical and practical work.

Acting Warden—Miss P S Harley B.A. (Oxon.) Reynolds Road, B. Culla Boudway.

THE RAJAWADI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in

1925) the well known work of the late Pandita Ramabai shelters about 600 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kodgion Poona District.

Miss M. Alma Hardie, *Corresponding Secretary*

Disciple Societies

The India Mission Disciples of Christ, under the United Christian Missionary Society, Indianapolis, Indiana U.S.A., began work in India in 1882. It works in the Central Provinces and South United Provinces. There are 68 missionaries, including missionaries wives and 270 Indian workers. There are 18 organized churches with the membership of 2,375. There is a Christian community of 4,700. There are 5 hospitals and 10 dispensaries in which 1,659 in patients, and 45,261 out-patients were treated last year, with a total of \$17,608 treatments. Secretary —Rev G A Bjork, B D Chhindwara, C P

THE BASEL EVANGELICAL MISSION—With its headquarters at Mangalore South Kanara, was founded in 1834 and has taken over again the whole field occupied before the War, with the exception of North Kanara and the Nilgiris. The Kanarese Evangelical Mission, which for the time being maintained part of the field of the Basel Mission has retired from the field and dissolved. The Mission has at the beginning of 1930, 20 chief stations and 85 outstations, with a total missionary staff of 53 Europeans and 912 Indian workers. The membership of the churches is 22,374. Educational work embraces 128 schools, among which, a Theological Seminary, a Second Grade College and 7 High Schools. The total number of scholars is 18,347. Medical work is done at Betgeri, Gadag, 8 Mahabata and two Women and children's Hospitals are maintained at Udipi South Kanara, and Calicut, Malabar. The Mission maintains a Home Industrial Department for women's work and a large publishing department with a Book Shop and a Printing Press with about 150 workers at Mangalore. S Kanara and is doing work in English and in a number of Indian languages. Chairman and Secretary, Rev A Much, residing at Mangalore, South Kanara.

THE CHURCH OF SWEDEN MISSION was founded in 1874. Operated till 1915 in the Madras Tanjore, Trichinopoly and Ramnad Districts. Since 1915 the Mission having taken full charge of the former Leipzig Evangelical Lutheran Mission field working also in the Madras Chingleput, Coimbatore, Salem, S Arcot Districts with diaspora congregations in Rangoon, Penang, Kuala-Lumpur and Colombo.

L. E. L. M. (Leipzig Evangelical Lutheran Mission) re-entered into the work, in 1927. Hence the Church of Sweden Mission now works in the Trichinopoly, Coimbatore, Madras and Ramnad Districts with the diaspora congregations at Colombo. The L. E. L. M. works in the Madras, Chingleput, South Arcot and Tanjore Districts with the diaspora congregations at Rangoon, Penang and Kuala-Lumpur.

The Church (Tamil Evangelical Lutheran Church) was constituted on 14th January 1919 and is working in connection with the two Missions.

CHURCH OF SWEDEN MISSION European staff, 35, Schools, 122, Teaching staff, 233. Pupils Boys, 4,988, Girls 1,232.

President—Rev J Sandegren M. A., B. D., Curukul, Kilpanak, Madras.

LEIPZIG EVANGELICAL LUTHERAN MISSION, European staff, 11, Schools, 10, Teaching Staff 98, Pupils, Boys 1,217, Girls, 669.

President Rev Provost Th. Meyner Majavaram.

INSTITUTIONS COMMON TO BOTH MISSIONS, Schools 2, Teaching Staff, 29, Pupils, Boys, 72, Girls 329.

TAMIL EVANGELICAL LUTHERAN CHURCH Organized churches, 47. Ordained Indian Ministers 24. Other Indian workers 102. Baptized membership 27,247. Baptized membership Schools 274. Teaching staff, 465. Pupils, 10,970 (boys 8,760, girls 2,210).

President The Rt. Rev Bishop D. Berell Trichinopoly.

MISSOURI EVANGELICAL LUTHERAN INDIA MISSION (MISLMA)—Is located in North Arcot (Ambur, Vaniyambadi) Salem (Krishnagiri) Tanjore (Tanjore Negapatam) Madras (Madras Vellagulam), Tinnevely (Valluor, Vadakkulam) Districts, in Mysore (Kolar Gold Fields) in Travancore (Nagercoil, Travancore, Alappay). There are 38 Missionaries (2 of these on furlough in America) 1 lady doctor (American) 1 male doctor (Indian) 1 nurse, 1 deaconess-nurse 1 American teacher in charge of a School home for the children of the missionaries of this mission only and 1 lady educationist. Besides one training institute for teacher-catechists there are 2 complete high schools, and among 90 other schools there are 6 complete vernacular middle schools. In addition to evangelistic and educational work the Mission runs an up-to-date Dispensary and Lying-In Hospital with 16 beds in Ambur. Statistics November 1929. Souls 11,236. Baptized members 6,078 catechumens 5,160. 3 Indian pastors 7 evangelists 45 catechists 180 teachers belonging to the Mission 57 outside teachers 8 boarding schools. Secretary—Rev E. W. Goons, Nagercoil Travancore.

THE DANISH MISSIONARY SOCIETY—Established 1863 in South Arcot, working there and in North Arcot on the Shevaroy Hills and in Madras has a total staff of 337 Indian and 55 European workers, Communicants 1,954, Christian community 5,001, 1 High School, 3 Boarding Schools, 2 Industrial Schools, 1 Orphanage 2 Hostels and 97 Elementary Schools 1 Theological Seminary and 2 Hospitals total scholars 4,852.

President Rev C. Bindlev, B. A., B. D., Tirukkoyilur.

Treasurer Rev K. Helberg, B. A., B. D., Madras.

THE SAKAL MISSION OF THE NORTHERN CHURCHES (formerly known as the India Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Goalpara (Assam), Malda and Dinajpur. Work is principally among the Santals. The mission staff numbers 27, Indian workers 480, communicants 4,000, Christian community 33,000, organized churches 36, boarding schools 4, pupils 506, elementary schools 66, pupils 1,035, industrial schools 2, Orphanage 1, children 20. Secretary Rev P. O. Boddington, Dumka, Santal Parganas.

MISSIONS AND HONEY TRADING ACT—In May 1918, the following notice regarding Missions was published in the "Gazette of India"—"The following missions or religious associations

are declared companies under Act 2 (the Enemy Trading Act) of 1916. —The Leipzig Evangelical Lutheran Mission, Madras, the Hermannsburg Evangelical Lutheran Mission, Madras, the Schlotterbach Evangelical Lutheran Mission, Madras, the Gosner Evangelical Lutheran Mission of the United Provinces and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Bihar and Orissa. The Governor General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of those missions or religious associations.

In June 1919 the Government of India stated:—“Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council.”

Methodist Societies

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1856, at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malaya, Netherlands Indies and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of over half a million of whom approximately 20,000 were baptized the year ending 1926.

The avowed task of the Church has been the uplift of the depressed classes and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive. It having in this area a total of 1,801 schools of all grades including three colleges, twenty-two high schools and numerous normal training and theological institutions. The registered attendants in these schools number 42,529.

Special effort is made for the instruction and development of the young people of the Church here now being 488 chorists of the Keweenaw League with 20,335 enrolled members, and 5,245 organized Sunday Schools with an enrolment 159,520.

The publishing interests of the Church are represented in two presses at Madras and Lucknow, the former doing work in four vernaculars

and the latter in six. The periodicals issued cover the interests of both the evangelistic and the educational field, the Indian Witness, the Junior Methodist and Methodist Education being in English, while the Kanyasulkand, the Rasik-Nuswan, the Bal Hit Karak, and other periodicals for women and children are issued in several of the vernaculars.

The governing body of the Church is the General Conference held quadrennially in America in which the ten conferences now existing in India are represented by twenty-eight delegates. The polity of the Church in India looks forward to complete independence under the general governing body, there at present being but about three hundred and fifty American men and women as compared to 480 ordained and 3,182 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by four Bishops, elected by the General Conference, and resident as follows: Bishop Frank W. Warner, Bangalore; Bishop John W. Robinson, Delhi; Bishop Frederick B. Fisher, Calcutta, and Bishop Breton T. Badley, Bombay.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan, Thana District Headquarters Stations with missionaries, Danda, Marol, etc. Aargol, Thana District Vapi (Daman Road Station), Surat District Pardi, etc. Surat District Eight missionaries on field. Two on furlough. One under appointment. Four main stations. Two boarding schools. One industrial school. One Bible school. Six village schools. Superintendent C. B. Harvey, Sanjan, Thana District.

THE REFORMED EPISCOPAL CHURCH OF AMERICA at Laspur and Lucknow, U. P. has 2 missionaries, 4 Outstations, 1 Hospital, 2 Orphanages and a membership of nearly 100.

The Methodist Protestant Mission began work in India in 1919, has a staff of seven missionaries, and one under appointment. The work is confined to Dhulia Taluka, with one main station Dhulia. There two boarding schools, district evangelistic work and medical work. Secretary Miss Mildred Mikinen, Dhulia, West Khandesh.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organized into 7 District Synods with 2 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 68 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam's Dominions), United Provinces and Burma. The Burma Synod has recently been attached to the Ceylon Provincial Synod for purposes of administration. Its statistics are no longer included in this statement. The European staff numbers 102 with 75 Indian Ministers and 791 Indian workers, Communicants 18,518 and total Christian community 101,245. There are 7 large numbers of organized Churches many of which are self supporting.

Educational work comprises 3 Christian Colleges students, 2,033. 5 Theological Institutions, students, 329, 7 High Schools, pupils,

3,427, 14 Industrial schools pupils 400 928 Elementary schools with 26,186 scholars In Medical work there are 3 hospitals 12 dispensaries, 1,127 in-patients and 65,481 out-patients

The Women's Auxiliary carry on an extensive work in the places occupied by the W M. S. There are 98 women workers from abroad of whom 16 are qualified doctors. The Indian women workers number 382 There are 109 girls day schools with 13,377 pupils and 23 boarding schools with 1,979 boarders There are several philanthropic institutions for the

rescue and training of women The Women's Auxiliary manage 12 hospitals and 9 dispensaries which had 3,041 in-patients and 67,583 out-patients. The cost of the work to the Women's Auxiliary in 1926 was nearly £ 25,000

THE FARM METHODIST MISSION of North America—Established at Yeotmal, 1895, operates in Berar with a staff of 12 Missionaries and 48 Indian workers Organised churches 4 Theological schools and 13 Elementary schools, 2 Anglo-Vernacular schools & Dispensaries and 6 Clinics Secretary Persis M Phelps Yeotmal Berar

THE SALVATION ARMY

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth Tucker and was for many years under his control with Headquarters in India For some time now the areas occupied have been divided for administrative purposes into 5 Territories each under a Territorial Commander and two smaller Commands

Northern Territory with Headquarters at Lahore

Western Territory with Headquarters at Bombay

Madras and Telugu Territory with Headquarters at Madras

Southern Territory, with Headquarters at Trivandrum in Travancore State

Ceylon Territory, with Headquarters at Colombo

Eastern Command with Headquarters at Calcutta

Burma Command with Headquarters at Rangoon

The Commanders are directly responsible to the International Headquarters in London

Northern Territory—The area in this Territory is the Salvation Army work in the Punjab Delhi and United Provinces The Territory is controlled from Lahore

Evangelistic work especially among the depressed classes is extensively carried on both in the Punjab and the U P

A number of Settlements for the reformation of Criminal Tribes are under the control of the Salvation Army in the United Provinces (where this important reformatory work was commenced), and also in the Punjab, Great progress has been made A special Settlement has also been opened in the Andamans during the last few years

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled The land will ultimately become the property of the holders

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces, and also in a number of Dispensaries

Other institutions include Day and Boarding Schools, Weaving Schools, Agricultural and Fruit Farms a Home for Stranded Europeans and for British Military Soldiers

Village centres at which the S A

Works

Officers and Employees

Social Institutions

Territorial Headquarters 82 Ferozpur Road, Lahore, Punjab

1,557

598

21

Territorial Commander Lt Commissioner M Huthish

Chief Secretary—Lt Colonel N I Madras Western India—The Western India Territory comprises Bombay Gujrat Panth Mahale and the Maratha country

Besides the distinctly evangelistic operations, there are established a large General Hospital—Thomas Emery Memorial—several Dispensaries at which during the year about 22,000 patients are treated 204 Day and Boarding Schools a Home for Juvenile Criminals, an Industrial and Rescue Home for Women conditionally Released Prisoners Home Weaving Schools a Factory for Weaving Warping and Reeling Machines, and a Land colony having a population of some hundreds of Salvationists

Corps 277, Outposts, 424 Societies 588 Officers and Cadets 665 of whom 593 are Indian employees and teachers 106 Social Institutions, 16

Territorial Headquarters S A, Morland, Road Byculla Bombay

Territorial Commander Lieut Commissioner Ewens

MADRAS AND TELUGU TERRITORY—This Territory comprises the city of Madras and work situated in the Nellore Guntur Eluru and West Godavari Districts of the Northern Circars of the Madras Presidency also Bangalore

There are the following agencies at work—286 Corps and Outposts, viz, places in which work is systematically done

121 Village Primary Schools 3 Settlements for Criminal Tribes with a total population of 3,200 1 Reformatory School for children of Criminal Tribes 1 Rescue Home 2 Institutions for the training of Officers and one Boarding School for Boys and 1 for Girls 1 Lepet Colony at Barapada (newly taken over by us) Present number of lepers in the Colony is 105

1 Trade Department where cloth, leather goods, furniture, carpets, silk lace etc, the products of Industrial Institutions, are disposed of

Territorial Headquarters The Salvation Army, Broadway, Madras

Territorial Commander Colonel Collidge

General Secretary Major H H Rawson

The South Indian Territory of the Salvation Army embraces the Native States of Travancore Cochin, and the Tinnevely District of British India, operating in more than 100 centres chiefly among the depressed classes

The Territory presents a great opportunity there being many unoccupied localities, particularly in Central and Northern Travancore from which repeated appeals have been received for workers, which we are not able to meet yet.

Throughout the Territory there are upwards of 800 well-conducted Day Schools, in which nearly 7 000 boys and girls daily receive regular instructions. Besides there are three Boarding Schools two at Nagercoil and one at Trivandrum mothering a total number of one hundred and twenty children.

A number of additional Village Halls and Officers Quarters have been erected during the past year. The complete Scheme for Divisional Headquarters and Central Hall at Vailloor (British Division) was recently opened, and is one of the finest Properties in the Territory, being on the main road, mid way between Nagercoil and Thanevely.

Jail Meetings are conducted in the Central Prison Trivandrum, and prove a great blessing to the convicts who are greatly influenced by The Army's work.

The Medical Department continues to maintain its reputation for the beneficial work in the alleviation of pain and suffering, notwithstanding there was a considerable loss in the early part of the year from the cholera epidemic. The two schemes under consideration for work among the lepers, one in Cochin and the other in North Travancore are pending the final sanction of the London Authorities.

Industrial Departments, though the market for certain branches of the work are not at all encouraging, are maintaining their position and influence.

Territorial Headquarters The Salvation Army, Kuravannam, Trivandrum.

Territorial Commander Colonel (Mrs) A. Trounce.

Chief Secretary Lt Colonel Yesudasen.

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim Hindu origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829, the Indian Slavery Act, 1843, the Caste Disabilities Removal Act of 1850, the Hindu Widows Remarriage Act, 1856, and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects, but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law giving functions have from time to time been delegated.

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed,

of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barron Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860 was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes are now in force.

Statute Law Revision

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are recommended or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting

from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also Justices of the peace, and by Judges of the Sessions Courts, but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided 'to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions. This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ('India'). The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government Act III of 1884 by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains, but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans. Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered. Since 1896 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—'That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals.' As a result of the

recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1925 in place of the old Chapter XXXIII (55448-468) the new Chapter XXXIII (55448-446) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown, they hold office during the pleasure of the Sovereign, at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges, in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Princi- pal dancy towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision

is made and largely utilised in the towns, for the appointment of honorary magistrates. In the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions, on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district. As District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs 2,000. As in insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mutual similar powers were conferred on the District Courts by the Insolvency Act of 1905.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by juries.

Legal Practitioners

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts, and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex-officio*, by the Advocate-General. This body is elected by

the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Banagore a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts similar machinery is generally in use. Pending an opportunity of detailed inquiries in India these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating to the constitution of Bar Councils for the several High Courts in India have been recently adopted by the Indian Bar Courts Act, XXXVIII of 1926.

Composition of the Bar

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development. During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 19 only were English and the remainder Indian.

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General and Government Solicitors for Bombay and Madras and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister), the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate. The Punjab has a Legal Remembrancer, Government Advocate and a

Junior Government Advocate and Burma a Government Advocate, besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power

The supreme power of Parliament to legislate, for the whole of India cannot be questioned in practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country the object being to bar the operation of the general law and permit the application of certain enactments only.

 (a) Excludes 4,047 suits of 'superior Courts'.
 (b) Includes 43 cases transferred to Settlement Courts.
 (c) Excludes 2 suits instituted in the court of one Hon'y. Munsif.

THE INDIAN POLICE.

Origins—Cornwallis was the first Indian administrator to take the burden of policing the country off the zamindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary thanadars (Police Station Officers) and subordinates.

In Madras in 1816 Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control in this way the Revenue Department controlled the police of the districts and still to some extent does so especially in Bombay Presidency.

In Khandeesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police and Sir George Clerk Governor of Bombay in 1848, applied the lesson by appointing full time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence. In 1859 the principle of full time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861. An Act for the Regulation of Police, which still governs police working everywhere in India except Madras and Bombay, which has its own Police Act (IV of 1890).

Working—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police administered by the Local Government concerned subject only "to the general control of the Governor General."

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary, and Police Station Officers may also be dismissed by the D S P.

The D S P is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector General of Police, Inspector-General of Police, and Home Department. Generally speaking, the D S P has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C I D—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as Criminal Investigation Departments and work under a Deputy Inspector General. They collate information about crime, edit the Crime Gazette, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureau.

Headquarters and Armed Police—At the chief town of each District the D S P has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D S P are taught drill, deportment and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head quarters but by no means all there is also a reserve of mounted and armed police.

Thanas and Thanadars—Almost throughout India the popular terms for Police Station and Police Station Officer are Thana and Thanadar. It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a motuall hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers the Thanadar, who like police of all ranks is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are cognisable by the police. The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited and investigated. A non cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors—The complaint in a cognisable case not only has his complaint recorded and investigated without payment of fee. If the thanadar succeeds in establishing a *prima facie* case against the accused the prosecution in court is conducted free of charge by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts. Cases committed

to the Sessions are conducted by the Public Prosecutor or one of his Assistants, and the reports of these officers and the comments of the Judge are a means for the D S P to know whether his thanadars are doing their work properly.

Out Posts—When the Police Commission of 1860 devised the plan of police that still holds the field they laid down two criteria of the numbers required. One was one policeman per square mile, the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant thana. The secret of good mofussil police working in normal times is dispersion. A single policeman however junior represents the rule of law and is an agent of Government.

The Chain of Promotion—Ordinarily the constable may aspire to become a jamadar or with ability and luck a Police Station Officer or even Inspector. The directly recruited matriculate who comes in through the Police Training School as a Thana-dar may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy-Inspector General. The direct Assistant Superintendent, whether from England or from India, is sure of a Superintendency and has chances of D I G after 25 years service. The period of service for all ranks for full pension is thirty years and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund.

Presidency Police—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is superseded in the Presidency Towns by special police Acts which prescribe police procedure in criminal cases in Presidency Towns is some what rough and ready not only from this cause but also because Presidency Magistrates can give upto six months or Rs 200 fine summarily i.e. without formal record of proceedings, and if only whipping or fine up to Rs 200 is inflicted there need be not even any statement of reasons for the conviction.

Round Figures—The process of reorganization and retrenchment goes on ceaselessly annual administration reports for the ten major provinces and four minor administrations appeared tardily, and there are no unified statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the numbers of police and the volume of work put through yearly. There are about 80 000 Military Police chiefly in Burma, Assam and Bengal and these cost about one and a third crores. The maintenance of them is a departure from the principles laid down by the 1860 Commission and the 1861 Act.

Provincial Police including Burma total about 200 000 and cost ten and a half crores or an average of about one crore per major Province.

There are about 10 000 Thanads or Police Stations which annually investigate from five to six thousand murders, four thousand dacoities, twenty five thousand cattle thefts, one hundred and seventy ordinary thefts and as many burglaries. They place on trial every year about three quarters of a million persons, of whom about half a million or more are convicted. The jail population of India, which is over a hundred thousand consists of many habituals who on release proceed to prey on the public until such time as the police again secure their conviction and incarceration.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas, but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work, and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable crime —

TOTALS

JAILS

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorized by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected as unfit for local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report is that there should be in each Presidency three classes of jails: in the first place, large central jails for convicts sentenced to more than one year's imprisonment; secondly, district jails at the head quarters of districts; and, thirdly, subsidiary jails and lock-ups for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General, who is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A *Press Note* issued by the Bombay Government in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments and is subject

to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jails Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation, of recruiting a better class of warders, of providing education for prisoners and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders, the adoption of the English system of release on license in the case of adolescents, and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial, the institution of the star-class system and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extramural employment on a large scale is sometimes allowed as, for example, when a large number of convicts were employed in excavating the Panama Canal in the Punjab. Within the walls prisoners are employed on jail services and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles, the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now subdivided and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and convict warders are employed. With this is bound up the question of a special class of well behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—i.e. those below the age of 15—the law provides alternative to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18, discharge after admonition, delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit, and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15 and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and young adults was established at the Dharwar jail in Bombay, in 1908—a special juvenile jail was opened at Alipore in Bengal, in 1909 the Melkita jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces, and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases, a special reformatory system for juvenile adults had, for example, been in force in two central jails in the Punjab since the early years of the decade and Borstal enclosures had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of *Prisoners' Aid Societies* except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1912.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the

Indian Year Book, 1922 (pages 570-571). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—These sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentence.—The sentence of every long term prisoner should be brought under revision as soon as the prisoner has served half the sentence in the case of the non habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board composed of the Inspector General of Prisons, the Sessions Judge and a non official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—If any fresh attempt at colonisation is made, it should be in an entirely new locality. A fresh attempt at colonisation in the Middle Andaman is not recommended. The retention of the settlement at Port Blair on the present lines is not recommended. The entire abandonment of the Andamans as a place of deportation is not recommended. Deportation to the Andamans should cease, except in regard to specially dangerous prisoners and any others whose removal from Indian jails is considered by the Government to be in the public interests. The existing restrictions as to age and physical condition of prisoners sentenced to transportation to the Andamans should, unless special medical grounds exist in any particular case, cease to apply. The Indian Penal Code should be amended by the substitution of rigorous imprisonment for transportation. In provinces where the available prison accommodation will not permit of the immediate cessation of deportation of all but selected prisoners, the Star class should be the first, and the habitual the last to be detained in Indian jails. No female should in future be deported to the Andamans, and those now there should be brought back to India and distributed among the Provinces to which they belong. In those Provinces where the jails are insufficient to detain prisoners now deported additional accommodation should be provided as soon as possible.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as-

certaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1928 are shown in the following table.—

	1928	1927	1926	1925	1924
Jail population of all classes on 1st January	136,424	132,253	129,753	128,314	126,478
Admissions during the year	585,208	582,243	552,097	536,219	535,428
Aggregate	721,630	714,496	684,850	664,533	662,906
Discharged during the year from all causes	581,552	578,055	552,624	534,779	534,455
Jail population on 31st December	140,119	136,431	142,226	129,754	128,401
Convict population on 1st January	116,161	113,301	111,895	110,310	106,280
Admissions during the year	167,013	169,836	162,772	158,139	158,466
Aggregate	283,174	283,137	274,667	268,449	264,746
Released during the year	100,875	102,628	157,568	158,997	155,219
Transported beyond seas	566	1,301	783	616	571
Casualties, &c.	2,497	2,469	2,286	2,089	2,340
Convict population on 31st December	118,799	116,161	118,374	111,895	110,899

More than one half of the total number of convicts received in jails during 1928 came from the classes engaged in agriculture and cattle tending, about 134,000 out of 167,000 are returned as literate.

The percentage of previously convicted prisoners was 20 as against 19 in 1927 while the number of youthful offenders fell from 859 to 282. The following table shows the nature and length of sentences of convicts admitted to jails in 1926 to 1928.—

Nature and Length of Sentence	1923	1927	1926
Not exceeding one month	29,758	31,122	30,637
Above one month and not exceeding six months	68,271	67,356	64,147
" six months " one year	34,603	35,420	34,971
" one year " five years	27,280	22,714	25,912
" five years " ten "	3,783	3,980	3,790
Exceeding ten years	46	485	524
Transportation beyond seas—			
(a) for life	1,735	1,555	1,635
(b) for a term	42	80	86
Sentenced to death	1,158	1,112	1,057

The total daily average population for 1928 was 116,501, the total offences dealt with by criminal courts was 850, and by Superintendents 182,406. The corresponding figures for 1927 were 114,879, 371 and 181,462, respectively.

The total number of corporal punishments showed a decrease etc., from 243 to 236. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 5,106 as compared with 6,668 in the preceding year.

Total expenditure increased from Rs 1,79,90,944 to Rs 1,81,80,045 while total cash earnings decreased from Rs 23,90,169 to Rs 22,87,704 there was consequently an increase of Rs. 8,39,132 in the net cost to Government.

The death rate decreased from 12.82 per mille in 1927 to 12.03 in 1928. The admissions to hospitals were lower, and the daily average number of sick fell from 20.82 to 20.32.

The Laws of 1930

BY

RATANLAL RANCHODDAS, B.A., LL.B., *Advocate*

AND

MANHAR R. VAKIL, B.A., LL.B., *Barrister at Law*

ACTS

1 The Provident Funds (Amendment) Act 1929—The Provident Funds Act, 1924, provides for withdrawals from the fund for the payment of premia on policies of life insurance. The present Act extends the principle by legalising withdrawals from a provident fund for the payment of subscriptions or premia to a family pension fund. The Act further deletes from the definition of compulsory deposit "contribution and Provident Fund" words which have recently been interpreted to mean that contributions in a contributory provident fund should bear some relation to the subscribers' subscriptions apart from that of being an addition to them. The Act also provides for the extension of its provisions by the Governor General in Council to the provident funds of public institutions whose activities are closely connected with those of Government.

2 The Dangerous Drugs Act, 1930—The obligations undertaken by the Government of India in ratifying the Geneva Dangerous Drugs Convention of 1925 are two-fold: first in regard to the regulation of international traffic in all the drugs covered by the convention (s 9) and secondly in regard to the regulation of the manufacture of and internal traffic in certain specified drugs such as cocaine and morphine. In addition to centralising and vesting in the Governor General in Council the control of certain operations relating to dangerous drugs the Act renders uniform and in some cases increases the penalties for certain offences relating to dangerous drugs. Section 2 of the Act defines cocaine, leaf hemp, opium, etc. Section 4 prohibits certain operations, e.g. the cultivation of coca plant, the manufacture of prepared opium and the import into or export from British India of prepared opium. A proviso allows the Government the cultivation of any coca plant or the gathering of any portion thereof. Sections 5 and 6 vest the control of the Governor General in Council over the production and supply of opium and the manufacture of manufactured drugs. Under sections 8 and 9 the Local Governments are given control over traffic in dangerous drugs where the persons promoting the traffic are in British India but the traffic itself lies entirely outside it. Sections 10-21 deal with penalties for the breach of the provisions of the Act. Sections 22-35 are concerned with procedure, e.g. power to issue warrants, power of entry, search, seizure and arrest without warrant, etc.

3 The Indian Sale of Goods Act, 1930—Before the passing of the present Act the law relating to the sale of goods or moveables was contained in Chapter VII of the Indian Contract Act 1872 which is now repealed. The law relating to the sale of goods appertains mainly to mercantile transactions. During the last

half century conditions in this country have undergone material changes. Methods of business have largely altered and new relations have arisen between man and man. As a result the Indian Courts found that a law enacted more than fifty years ago was entirely inadequate to enable them to deal with these new relations or give effect to new principles. The present Act was therefore passed. It is mainly based on the English Sale of Goods Act, 1893.

Section 2 defines the important terms employed in the Act. e.g. *goods* means every kind of moveable property other than actionable claims and money and includes stock and shares, growing crops, grass, etc., *future goods* means goods to be manufactured or produced or acquired by the seller after the making of the contract of sale. It includes *bona fide* goods in process of manufacture which formed the subject of decision in 22 Bom. L. Rep. 345, 25 Bom. L. Rep. 537, 27 Bom. L. Rep. 1168. A contract of sale of goods is a contract whereby the seller transfers or agrees to transfer the property in goods to the buyer for a price (s 4(1)). Such a contract is either a sale or an agreement to sell. In the former case the property in the goods is transferred from the seller to the buyer in the latter case the transfer takes place at a future time or subject to some condition (s 4(3)). A contract of sale can be made by mere offer and acceptance, neither payment nor delivery is necessary for the purpose (s 5(1)). Section 12 defines a *condition* and a *warranty*; a condition is a stipulation essential to the main purpose of the contract the breach of which gives rise to a right to treat the contract as repudiated, a warranty is a stipulation collateral to the main purpose of the contract, the breach of which gives rise to a claim for damages but not to a right to reject the goods and treat the contract as repudiated. Once a buyer has accepted the goods under a contract of sale, he cannot reject them. If there be a breach of condition disclosed for instance on subsequent inspection of the goods he can treat the breach as a breach of warranty only and not as a breach of condition (s 13(2)). In a contract of sale there is an implied condition on the part of the seller as to title (s 14(1)). In a contract for the sale of goods by description there is an implied condition that the goods must correspond with the description, if the sale is by sample as well as by description, it is not sufficient that the bulk of the goods corresponds with the sample if the goods do not also correspond with the description (s 15). There is no implied warranty or condition as to the quality or fitness for any particular purpose of goods supplied under a contract of sale except in the following cases—(1) where the buyer makes known to the seller the particular purpose for which the goods are required except in the case of a contract for the sale of a specified article, under its patent or trade name, (2) where goods

are bought by description from a seller who deals in goods of that description except in the case where a buyer has examined the goods (3) where by the usage of trade such as implied warranty or condition is annexed (s 16) In the case of a contract for sale by sample there is an implied condition (e) that the bulk shall correspond with the sample in quality (f) that the buyer shall have a reasonable opportunity of comparing the bulk with the sample, (g) that the goods shall be free from any defect rendering them unmerchantable which would not be apparent on reasonable examination of the sample (s. 17) Section 19 embodies the principle that the question whether a contract for the sale of goods does or does not pass the property in the goods from the seller to the buyer must in all cases be determined by the intention of the parties to the contract Sections 20 to 24 contain the rules by which that intention may be ascertained, but the operation of these rules will be displaced by any terms of the contract defining the intention or by any attendant circumstances including the conduct of the parties, rendering it ascertainable Sections 27 to 30 relate to sales by ostensible owners. Where goods are sold by a person who is not the owner thereof and who does not sell them under the authority or with the consent of the owner the buyer acquires no better title to the goods than the seller had unless the owner of the goods is by his conduct precluded from denying the seller's authority to sell A mercantile agent in possession of goods with the consent of the owner can, when acting in the ordinary course of business make a valid sale of such goods (s. 27) Where a seller continues in possession of the goods sold by him and makes another sale of these goods to a person receiving the same in good faith and without notice of the previous sale, the second sale will have the same effect as if the seller were authorised by the owner of the goods to make it [s 30 (1)] Sections 31 to 44 relate to the delivery of goods and the payment of price Where the seller agrees to deliver the goods sold at his own risk at a place other than that where they are when sold, the buyer must nevertheless unless otherwise agreed take any risk of deterioration in the goods necessarily incident to the course of transit (s. 40) Where goods are delivered to the buyer and he refuses to accept them having the right to do so he is not bound to return them to the seller, but it is sufficient if he intimates to the seller that he refuses to accept them (s. 43) Sections 45 to 54 deal with the provisions regarding an unpaid seller's rights against the goods or (1) where the property in the goods has passed to the buyer (a) a lien on the goods for price while he is in possession of them, (b) a right of stoppage in transit in case of the insolvency of the buyer (c) a limited right of re-sale (2) Where the property in the goods has not passed to the buyer, the unpaid seller may withhold delivery of the goods Sections 55 to 61 provide remedies for breach of contract. Section 60 deals with anticipatory breach. When either party to a contract of sale repudiates the contract before the date of delivery, the other may treat the contract as rescinded and sue for damages for the breach

4. *The Indian Contract (Amendment) Act, 1930.*—Section 173 of the principal Act

is amended by this Act to make it consistent with ss 27 and 29 of the Indian Sale of Goods Act, 1930 and settles what used to be a moot point of law A mercantile agent in possession of goods with the consent of the owner whether under a valid or a voidable contract, can when acting in the ordinary course of business, make a valid pledge of such goods, provided the pawnee acts in good faith (s 178)

5. *The Transfer of Property (Amendment) Act, 1930.*—The formal amendment contained in this Act are designed to carry out the intentions of Explanation I contained in section 4 of the Transfer of Property (Amendment) Act, 1929

6. *The Prisons (Amendment) Act, 1930.*—Section 27 (3) of the Prisons Act 1894, provided that male prisoners under the age of 18 should be separated altogether from the other prisoners, and that those of them who had arrived at the age of puberty should be separated from those who had not The effect of this provision was the creation of four distinct groups under the age of 18 as applied both to undetained and to convicted prisoners It was found impracticable in practice to effect the segregation of so many groups of prisoners in each jail The Act remedies this by substituting the word *twenty-one* for the word *sixteen* in section 27 (2) of the Prisons Act.

7. *The Indian Patents and Designs (Amendment) Act, 1930.*—The Indian Patents and Designs Act 1911 came into effect in 1912 Since then experience has revealed a number of directions in which amendments were required The amendments made by the present Act are drawn from the British Act of 1907 and the British Patents and Designs Act of 1919 The following are some of the provisions of the Act Section 9 (1) of the original Act allowed a period of three months within which a notice of opposition could be entered The present Act extends the period to four months (s 5) By amending section 14 the period of future and existing patents is extended from 14 to 16 years Provision is made for the protection of licences and other parties adversely affected by the change In view of the enlargement of the original period of patents the terms for which extensions could be granted are reduced [s 10 (c)] A new provision is added which enables a patentee to add to his original patent improvements having the same terms as the original patent without incurring the expense involved in taking out separate patents (s 11) Under the principal Act Government had the right to use any invention either without payment or on such terms as they considered reasonable The present Act maintains this position where the patentees are Government servants and the patent is related to their official work, but gives patentees in other cases the right of reference to a Court of law for the settlement of the terms that are to be applicable when Government use their patent A new provision is introduced for the assignment of inventions relating to instruments, or munitions of war to Government and for the maintenance of secrecy where necessary in respect of inventions and patents so assigned (s 15) A design once registered can be cancelled under circumstances detailed in section 61 A (s 34)

8. **The Repealing and (Amendment) Act 1930.**—This Act makes some necessary amendments of a formal nature in certain enactments and repeals certain spent or useless matter in the statute-book.

9. **The Cantonments (House-Accommodation) (Amendment) Act, 1930.**—The Cantonments Act, 1930, was intended to continue the powers possessed by the military authorities to appropriate where the need arose such houses in cantonments as were originally intended and were suitable for occupation by military officers or messes and to safeguard the rights of house-owners and to secure for them fair rents and equitable conditions of tenancy when their houses were appropriated. The working of the Act during the past six years showed that some of its provisions were obscure, and others were defective. The present Act removes these obscurities and defects. Section 6 of the principal Act is amended so as to afford a clearer definition of the circumstances under which houses may be appropriated (s 3). The reference to a Committee of Arbitration on the questions of the purchase value of a house its rental value or the amount of repairs is done away with and new provisions are introduced for a direct reference to the civil Courts in these matters (s 7). The time allowed for the reference on the question of rent and repairs is extended to 40 days and the new sub-section (3) of section 16 gives the owner an opportunity to set forth his case of the question of repairs before the civil Court. If the owner fails to carry out repairs the Military Engineer services may carry them out and recover the costs from out of the route (s 17).

10. **The Insolvency Law (Amendment) Act, 1930.**—The Act removes certain defects in the Presidency Towns Insolvency Act, 1909 and the Provincial Insolvency Act, 1920. A new provision is introduced in the Presidency Towns Insolvency Act, which empowers the Chief Justice of the High Courts to appoint one or more deputy official assignees (ss 2 & 4 and 5).

A new section is added after section 18 of the Presidency Towns Insolvency Act, which gives power to the Judge of a High Court sitting in insolvency to stay or annul insolvency proceedings pending under the Provincial Insolvency Act in any Court subject to its superintendence in respect of the same debtor. It also empowers him to give necessary directions for the administration of the debtor's estate in the High Court (s 3). The *terminus a quo* for the calculation of the period of two years referred to in section 58 of the Provincial Insolvency Act, is the date of the presentation of the insolvency petition (s 6).

11. **The Indian Tariff (Amendment) Act, 1930.**—The Act makes some amendments in Schedule II to the Indian Tariff Act, 1894. The duty on barks for tanning and living plants is abolished. Poultry farming appliances, including incubators, pans for boiling sugar cane juice, sugar centrifuges and pug mills are put on the list of articles which are free of duty.

Substances which may be declared by notification to be of a like nature or use to

saccharine are made liable to a specific duty of Rs 3 per pound. Domestic refrigerators without regard to their mode of operation are liable to duty of 15 per cent *ad valorem*. Bangles beads and false pearls are subject to a duty of 30 per cent *ad valorem*.

12. **The Steel Industry (Protection) Act, 1930.**—Round and square steel bars and rods of sizes 7/16 inch and above are liable to a protective duty of Rs 26 or 37 per ton according as they are of British manufacture or not. Items Nos 61 and 160 in the second Schedule to the Indian Tariff Act, 1894, are so amended that spikes and tie-bars are made subject to a protective duty of Rs 26 or 37 per ton according as they are of British manufacture or not.

13. **The Inland Steam Vessels (Amendment) Act, 1930.**—The control exercised by Government over inland steam vessels carrying on goods and passenger service in this country does not extend to fixing the rates at which they can levy charges on the public. Virtually in the position of monopolists, the inland steam organisations enjoy unfettered freedom in this matter. In Bengal and Assam where they supply very considerable facilities for transport their charges are considered to be unduly high. The present Act invests the Governor-General in Council with authority to fix maximum and minimum fares and freights after such inquiry as he considers necessary. The Governor-General in Council, however, cannot impose minimum rates of fares and freights unless he is satisfied that a rate war is in progress between competing steamer companies. Another provision in the Act empowers the Local Government to make rules providing for the appointment, constitution, procedure and functions of Advisory Committees to advise the owners, agents and charterers of inland vessels on questions affecting the interests of passengers and shippers of goods (s 54B).

14. **The Indian Railway (Amendment) Act, 1930.**—The Act gives effect to the statutory obligations incurred, by the ratification (by the Government of India) of the Washington and the Geneva Conventions in their application to railways in British India.

The employment of a railway servant is said to be essentially intermittent when it has been declared to be so by the authority empowered in this behalf on the ground that it involves very long periods of inaction during which the railway servant is on duty but is not called upon to display either physical activity or sustained attention. A railway servant must not be employed for more than sixty hours a week on the average in any month. A railway servant whose employment is essentially intermittent cannot be employed for more than eighty-four hours in any week. Temporary exemptions of railway servants from the above provisions may be made (1) in cases of emergency involving serious interference with the ordinary working of the railway and (2) in cases of exceptional pressure of work. Overtime is paid only in the latter class of cases (s 71 (c)). A railway servant must be granted each week a rest of full twenty-four hours, temporary exemptions from the grant of periods of rest may be made in cases of emergencies and

exceptional pressure noted above compensatory periods of rest for the periods foregone must be granted (s 71D). The Governor-General in Council may appoint persons to be Supervisors of Railway Labour to inspect railways in order to determine if the provisions of this Act are duly observed (s 76C). A person employing a railway servant in contravention of any of the provisions of the Act, is liable to a fine upto five hundred rupees (s 71 H).

15. The Indian Finance Act, 1930.—Sections 3 and 5 of the Act continue for a further period of one year the rates of salt duty and postage prescribed by the Indian Finance Act, 1929, section 8 provides for the credit to revenue, till the 31st March 1931 of interest on securities forming part of the Paper Currency Reserve. Section 4 makes the following alterations in customs tariff: Increase of import duty on silver plate, silver thread and wire etc. from 30 per cent to 38 per cent *ad valorem*; levy of an import hour of four annas an ounce on silver bullion and coin with a full drawback in the case of re-exports; increase of the import duty on all kinds of sugar and sugar candy but not molasses by Rs 1-8-0 per cwt. In the case of sugar below 8 Dutch Standard and sugar candy, the levy of a composite duty of 55 per cent *ad valorem* plus Rs 1-8-0 per cwt. increase in the import duty on cotton piece goods from 11 per cent to 15 per cent *ad valorem*; reduction in the import duty on kerosine from 2½ annas to 2½ annas a gallon coupled with the increase in the excise duty from 1 anna to 1½ annas a gallon; reduction in the export duty on rice from 8 annas to 2½ annas a maund. The rates of income-tax and super tax prescribed by the Indian Finance Act 1929 are continued for another year with the increase of a pice in the rupee in rates of (1) income-tax on income of Rs 15 000 and upward; and (2) super-tax with the exception of companies super tax.

16. The Transfer of Property (Amendment) Supplementary Act, 1930.—The Act introduces a new section after section 7 of the Transfer of Property (Amendment) Supplementary Act of 1929 and makes in consequential amendments in the first Schedule of the Civil Procedure Code.

17. The Cotton Textile Industry (Protection) Act, 1930.—This controversial measure imposes a (1) protective duty on cotton piece goods of all classes, of 15 per cent *ad valorem* on goods of British manufacture and of 20 per cent *ad valorem* on goods not of British manufacture (2) a protective minimum specific duty of 3½ annas a pound on plain grey goods. These duties are to remain in force till the 31st March, 1933.

18. The Silver (Excise Duty) Act, 1930.—The Indian Finance Act, 1930, has imposed a custom duty of four annas per ounce on silver bullion and coin. It is anticipated that the effect of this will be that the internal price of silver will be raised which will give a corresponding bounty to local producers of silver on so much of their output as is sold in India. The present Act imposes a countervailing excise duty on silver produced in India. The rate of duty is four annas on each ounce of silver

issued out of any silver works. Power is reserved to the Governor-General in Council to exempt any silver produced in India and exported out of India.

19. The Indian Companies (Amendment) Act, 1930.—Section 144 of the India Companies Act, 1913 deals with the appointment and qualification of auditors. Under sub sections (1) and (2) of this section the Local Government is the statutory authority for the grant of certificates to persons entitling them to act as auditors of public companies and to make rules providing for the grant of such certificates. The present Act transfers the power to grant certificates and to make rules from the Local Government to the Governor-General in Council. The Act further provides for the appointment of an Indian Accountancy Board consisting of persons representing the interests principally affected or having special knowledge of accountancy in India to advise the Governor-General in Council on all matters concerning the grant of auditors' certificates and to assist him in maintaining the standards of qualification and conduct required of auditors. The Act also provides for the appointment of local accountancy boards at important centres for the purpose of advising the Indian Accountancy Board and the Governor General in Council on any matters that may be referred to them (s.2).

The proviso to sub section (1) of section 144 of the principal Act empowers the Governor-General in Council to declare that the members of specified institutions or associations shall be entitled to be appointed and to act as auditors of companies throughout British India. All such declarations made before the commencement of this Act are to be taken as cancelled on the expiry of one year from the commencement of this Act. The Governor General in Council may extend this period by a year (s.3).

20. The Destructive Insects and Pests (Amendment) Act, 1930.—The amendment of the Destructive Insects and Pests Act of 1914 by the present Act will enable steps to be taken to prevent the introduction through the medium of air transport of the Mediterranean fruit fly and other pests which have not so far been found in India. In clause (b) of section 2 of the principal Act for the words or land the words *land or air* are substituted.

21. The Indian Income-Tax (Amendment) Act, 1930.—This Act renders illegal certain practices, which are adopted by persons desirous of evading the payment of income-tax and super tax and gives the taxing authorities the necessary powers to check such evasion. A new clause is added by which the words *firm partner and partnership* have the same meanings respectively as in the Indian Contract Act, 1872. The Income-tax Officer may treat a registered firm as an unregistered firm if it fails to make a return of its income or to produce accounts or other documents called for by the Income tax officer (s. 3). The income tax officer may treat as separate assesses the individuals, comprising any association carrying on business of which one member is in control, if he is satisfied that such an association has been formed or is being used for the purpose of evading or reducing the liability to tax of any

member thereof. The income tax officer may treat the members of a company as separate assesses if he is satisfied (1) that the company is under the control of not more than five members (2) that its profits and gains are allowed to accumulate without being distributed to its members (3) that such accumulation or failure to distribute is for the purpose of preventing the imposition of tax upon any of the members in respect of their shares (s 4).

Penalties are imposed for concealment of income and improper distribution of the profits of a firm (s 6).

The power of the Income-tax Officer to assess individual members of certain firms, associations and companies, can be exercised only with the approval of the Assistant Commissioner. An appeal will be against the orders of the Income-tax Officer to the Commissioner of Income-tax. The Commissioner must refer such appeal, with a statement of his opinion thereon, to a Board of Referees for decision. The decision of this Board is not subject to appeal to any income tax authority (s 7). A new proviso is added to section 34 of the principal Act which permits the production by public servants before a Court all documents or information relating to the registration of firms (s 10).

22 The Indian Income-tax (Second Amendment) Act, 1930—The Act brings together a number of minor amendments relating mostly to points of machinery and administration and does not affect the incidence of taxation except by granting relief in two cases of hardship neither of which is of practical importance (see ss 2 and 10).

23 The Indian Income-tax (Third Amendment) Act, 1930—This Act inserts a new clause in sub-section (2) of section 10 of the Indian Income-tax Act, 1922 and provides that any sum paid by an employer to an employee as bonus or commission for services rendered must be treated as a business expense and deducted from the employer's income in assessing it to income-tax.

24 The Indian Lac Cess Act, 1930—The present Act replaces the Indian Lac Cess Act 1921. It continues the lac cess for the creation of a fund for the improvement and development of the cultivation, manufacture and marketing of Indian Lac. The Act empowers the Governor General in Council to constitute the Indian Lac Cess Committee to administer the lac cess funds and take over the control of the Lac Research Institute. The Committee has power to make rules, with the previous sanction of the Governor General in Council in certain matters.

25 The Negotiable Instruments (Amendment) Act, 1930—A new section is added to the principal Act which affords protection to bankers against forged or unauthorised endorsements on demand drafts drawn by one branch of a bank upon another branch of the same bank. A bank is discharged by payment in due course of a draft drawn by one branch of a bank on another for a sum of money payable to order on demand and endorsed by or on behalf of the payee (s 85A).

26 The Indian Forest (Amendment) Act, 1930—This Act regulates the import and transport of the root *Kuhl* in the Punjab and North West Frontier Province. In sub-clause (a) of clause (4) of section 2 of the Indian Forest Act 1927 after the word *seeds* the word *Kuhl* is inserted.

27 The Indian Telegraph (Amendment) Act, 1930—Section 4 (1) of the principal Act permits the establishment maintenance and working of wireless telegraphs in British India by non Government persons either under license or in the case of ships only by rule. There was no provision in the Act under which aircraft could be permitted to work by rule and they were therefore required to obtain separate licenses. The present Act permits the establishment maintenance and working of wireless telegraphs on aircraft within or above British India or Indian Territorial Waters by rule.

28 The Bombay Civil Courts (Amendment) Act, 1930—Section 24 of the principal Act which limits the jurisdiction of a subordinate judge of the second class to original suits of value not exceeding Rs 5 000 is amended by section 3 of the Bombay Civil Courts and the Small Causes (Amendment) Act, 1930 empowering the local Government to increase this limit to Rs 7 500 in special cases. The present Act provides for appeals direct to the High Court from the decisions of subordinate judges of the second class in cases where the value exceeds Rs 5 000.

29 The Benares Hindu University (Amendment) Act, 1930—The Act provides for the constitution of a Standing Finance Committee to strengthen the financial administration of the University. The following amendments are made in the principal Act: (1) the number of Pro-Chancellors is increased from one to two (2) the number of members of the Syndicate is increased from seventeen to twenty (3) an examination in the Hindu religion for all Hindu students and (4) a statutory pension or provident fund scheme for the staff of the University.

30 The Hindu Gains of Learning Act, 1930—Under the Hindu Law gains made personally and without the aid of joint funds by a member of a joint family who was maintained at the expense of the joint family and received no more than ordinary education are the self acquired property of such member, and not joint family property. On the other hand if the income earned by such a member has been obtained by the practice of a profession or occupation requiring special training (i.e., gains or learning) and such training was imparted at the expense of the joint family property the income so obtained becomes the joint property of the family. The present Act modifies the existing law by putting the gains of learning on the same footing as those of ordinary education (i.e., making them self acquisition).

31. The Assam-Morwa Court-fees (Amendment) Act, 1930—Under section 7 clause (ii) of the Court fees Act, 1870, the amount of fee payable in suits for maintenance was computed according to the value of the subject matter of the suit which was deemed to be ten times the amount claimed to be payable.

for one year. The present Act gives facilities to widows claiming relief in this respect by reducing the value of the subject-matter of the suit from ten times the amount claimed for one year to the amount claimed for one year only. This Act applies to Ajmer-Merwara only.

22 The Mussalman Wakf Validating Act, 1930.—This Act gives retrospective effect to the Mussalman Wakf Validating Act, 1913, without disturbing any right, title, obligation or liability acquired, accrued or incurred before its commencement. It overrules a series of cases which held that the provisions of the Act were not retrospective.

Ordinances

To meet the emergency created by the Civil Disobedience Movement, the Governor General promulgated under the powers vested in him by s. 72 of the Government of India Act nine ordinances. These ordinances are timed to expire in six months from their date of promulgation.

1. The Bengal Criminal Law Amendment Ordinance, 1930.—In March 1930 that part of the Bengal Criminal Law Amendment Act which granted to the executive certain exceptional powers of arrest and detention was repealed. Sometime thereafter there was an armed attack by certain persons, on the Railway and Police Armouries at Chittagong accompanied by murderous outrages. In order to forestall further outbreaks of this nature the Viceroy promulgated this ordinance on April 10, 1930, renewing temporarily the aforesaid repealed powers. Those powers include powers of Local Government to deal with certain suspects (s. 2) power to arrest without warrant (s. 4) power of photographing taking finger prints, and securing specimens of handwriting and signature of persons who are dealt with in s. 2 (s. 7), and extensive powers of search (s. 8).

2. The Indian Press Ordinance, 1930.—The Indian Press Act, 1910, was repealed in 1922. This ordinance, promulgated on April 27, 1930, revives the powers of the above Act with certain amendments. Under it security can be demanded from keepers of printing presses (s. 3) and the security can be declared forfeited in certain cases (s. 4). In that event it is competent to declare further security or to declare printing presses and publications forfeited (s. 6). Very wide power to issue search warrants are given (s. 7). There is also the power to detain packages containing certain publications when imported into British India (s. 13) or to prohibit transmission by post of certain newspapers (s. 14) or to detain articles being transmitted by post (s. 15). Orders passed under the ordinance can be revised by a special bench of High Court Judges not less than three in number (s. 17). Section 23 gives the power to declare printing presses forfeited if used before deposit is made.

3. The Lahore Conspiracy Case Ordinance, 1930.—On July 11, 1929, the enquiry in the proceedings known as the Lahore Conspiracy case commenced before a Magistrate. Two of the accused had resorted to hunger strike before the commencement of the inquiry. Some of the other accused followed

suit shortly afterwards with the result that by July 28, 1929, the case had to be adjourned owing to some of the accused being unfit to attend the Court. The case had to be successively adjourned on the same ground until September 24. There was another adjournment of the case for the same reason for one month early in 1930.

To meet this state of affairs the present Ordinance was promulgated on May 1, 1930. It had the effect of instructing the trial of this case to a tribunal to be constituted by the Chief Justice of the High Court of Judicature at Lahore and consisting of three Judges of the High Court (s. 4). The tribunal was invested with special powers to dispose with the attendance of any accused for such period as it thought fit and to proceed with the trial in his absence in certain cases e.g. where the accused rendered himself incapable of appearing before the tribunal or resisted his production before it (s. 9). The judgment of the tribunal was final (s. 11).

4. The Sholapur Martial Law Ordinance, 1930.—During the outbreaks of disorder that took place in Sholapur city in the early part of May 1930 the military, at the request of the civil authorities undertook, on May 12 the duty of restoring law and order. The Government of Bombay endorsed this action and moved the Government of India for the promulgation of an ordinance to regulate the administration of martial law. This ordinance, promulgated on May 15, 1930, and declared in Sholapur at 8.30 p.m. on May 15, 1930 empowered the military authorities to make regulation for administering martial law in Sholapur and provided for other matters concerned therewith. It validated the action taken by the military from May 12 to May 13. The effect of the ordinance is considered at length by full bench of the Bombay High Court in *Emperor v. Channappa* (32 Bom. L. R. 1613).

5. The Prevention of Intimidation Ordinance, 1930.—From the beginning of the Civil Disobedience Movement the programme of the All India Congress Committee was to use the methods of picketing for the purpose of preventing the sale of foreign goods or liquor. The present ordinance promulgated on May 30, 1930, was directed against the pursuit of this object by means amounting to molestation of individuals. Molestation is defined in s. 3 [In interpreting this definition the Bombay High Court has held in *Emperor v. Sakinabai Lubani* (32 Bom. L. R. 1506) that peaceful picketing does not amount to molestation]. Provision was also made by the ordinance to safeguard public servants against the attempt to deprive them by means of boycott of the ordinary requirements of daily life (ss. 7 and 8).

6. The Unlawful Intimidation Ordinance, 1930.—This Ordinance, promulgated on May 30, 1930, was directed against the declared intention of the All India Congress Committee to inaugurate a no-tax campaign by non-payment of specified taxes in certain provinces. The ordinance invested the local Governments, as necessity arose, with powers to deal with persons who instigated others to withhold the payment of certain lawful dues, i.e., land revenue,

tax rates, cess and rent of agricultural land. Section 2 empowers Local Governments to declare notified areas and notified liabilities for the purposes of the ordinance. Unlawful investigation to the non-payment of notified liability is punishable with imprisonment which may extend to six months or with fine or with both (s 3).

7 The Unauthorised News-sheets and News-papers Ordinance, 1930—After the issue of the Indian Press Ordinance, 1930, attempts were made to defeat its provisions by the issue of bulletins and news sheets produced by cyclo style and other simple processes. The present Ordinance was promulgated on July 2, 1930 to check the output of these bulletins and news-sheets. It gave power to a police officer to forfeit copies of such news sheets and of news papers which had not complied with the provisions of the Press Ordinance (s 4) and also to forfeit the machines other than declared presses on which they were produced (s 5).

8 The Martial Law Ordinance, 1930—On the night of the 7-8th of August, 1930, numerous armed gangs of Afridis collected in tribal territory on the western and south western sides of the Peshawar district and crossed the border and penetrated into the district. They took shelter in the thickly wooded belt of gardens and orchards which surround Peshawar City and cantonment and made several attempts in order to enter the city and cantonment by night. The Local authorities, civil and military, represented the insufficiency of their powers under the ordinary law to deal with this menace and asked for the proclamation of martial law in the Peshawar district. This Ordinance, which

brought martial law into force in the Peshawar district, was promulgated on August 15, 1930. It empowered the General Officer Commanding Northern Command to make regulations for administering martial law in the area under martial law and to delegate his powers in this and all other respects. Offences under the ordinance were made triable by the ordinary criminal Courts (s 8). The Courts are however deprived of the power to impose sentence of whipping (s 10). The ordinance also provided for the constitution of special Courts if necessary for these areas (s 17). Any sentence of death passed by the special tribunal is appealable (s 25). An appeal also lies from sentences of transportation or for a term exceeding two years passed by special Magistrates (s 30). Provision is also made for the constitution of summary Courts (ss 32-35) and military Courts (s 37).

9 The Unlawful Association Ordinance, 1930—To check the activities of the various organisations through which effect was given to the programme of the Civil Disobedience Movement, these organisations were declared unlawful associations under s 15 of the Indian Criminal Law Amendment Act, 1908. The provisions of this Act, however, did not enable the authorities to take possession of the buildings and other property used for the purposes of these associations declared unlawful. The present ordinance, promulgated on October 10, 1930, empowered the Local Governments to take measures for the occupation of immovable property and for the forfeiture in certain conditions of moveable property used for the purposes of any association declared to be unlawful under the Criminal Law Amendment Act.

India and the League of Nations.

India is a founder Member of the League of Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1918 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped. India's representation at Imperial Conferences started in 1917. In that year His Highness the Maharaja of Bikaner, Lord (then Sir James) Meston and the late Lord (then Sir F. P.) Sinha, were appointed to assist the Secretary of State for India who was India's principal representative. A resolution passed by the Imperial Conference in 1907, specially confined the conference to His Majesty's Government and the Governments of the Self-Governing Dominions beyond the Seas.

Prior to 1917 there were Colonial Conferences as they were then called in 1887, 1897, 1902 and 1907, and the first Imperial Conference was held in 1911 in pursuance of the resolution of 1907 just mentioned. The Secretary of State for India attended the formal opening meeting of the Conference in 1887 but in 1897 and 1902 he neither attended nor was represented. In 1907 a nominee of the Secretary of State was permitted to attend the meetings not as a member of the conference, nor as the representative of India, but on behalf of the India Office and with a view to the representation of Indian interest. In 1911 the Secretary of State was present at a meeting, but India herself had no recognised place in the conference. Sir Robert Borden, Premier of Canada at the 1917 conference at which Indian representatives for the first time attended, moved the following resolution which was unanimously adopted—
The Imperial War Conference desires to place on record its view that the resolution of the Imperial Conference of April 20th 1907 should be modified to permit of India being fully

represented at all future Imperial Conferences and that necessary steps should be taken to secure the assent of the various Governments in order that the next Imperial Conference may be summoned and constituted accordingly. The object of this resolution was to enable India to be represented at future sittings with the same right of speech and vote as was accorded to representatives of the other participating Governments. The Secretary of State for India in a statement in reply to a question in the House of Commons on 23rd May, 1917 said that its acceptance marked an immense advance in the position of India with the Empire and admitted the Government of India to full partnership in the councils of the Empire with the Self-Governing Dominions.

India was represented at the Imperial War Conference of 1918 at the Imperial Conferences held in London in 1921, 1923 and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926 stated the position of Great Britain and the Dominions to be autonomous communities equal in status in no way subordinate to one another in any respect of their domestic or external affairs though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations. India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919 but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold in all essential respects the same position in relation to the administration of public affairs in India as is held by His Majesty the King Emperor in Great Britain. And there are certain other respects in which India's constitutional position in the Empire is not the same as that of the Self-Governing Dominions. India for example is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when as one of the States of the Empire she joined in the Paris Peace Negotiations in 1918. India's membership of the League of Nations places her in a unique position among all non self-governing States, Dominions or Colonies throughout the world. She is an original member of the League by virtue of para. 1 of article I of the Covenant by which the League was established. She is the only original member which is not self-governing and in virtue of the restriction under para. 11 of article 1 on the admission of members other than original members, she will, so long as the present constitution of the League endures, remain the only member which is not self-governing.

On questions coming before the League, India has exactly the same rights as any other

Member State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917 recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation.

As regards commercial agreements with foreign countries India has not the power which the Dominions have to enter into direct negotiations. Since she has no separate diplomatic representation abroad she utilises the Foreign Office machinery. But subject to the reservations to the Fiscal Autonomy Convention—under which the Secretary of State refrains from interference in Indian fiscal measures or policy when the Government of India and the Indian Legislature are in agreement—the Government of India could, if they wished, advise the negotiation of separate commercial treaties to suit India's special requirements and such treaties could be concluded, signed and ratified in respect of India alone. Ordinarily commercial treaties between the United Kingdom and foreign countries contain a clause enabling other parts of the British Empire including India to adhere to them at their option. The formula adopted is as follows:—Stipulations of the present treaty shall not be applicable to India or to any of His Britannic Majesty's Self-Governing Dominions, Colonies or Protectorates unless notice is given by His Britannic Majesty's representative at the desire of His Britannic Majesty that the said stipulation shall apply to any such territory.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonise with her constitutional position as defined in the Government of India Act. Nevertheless as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929, showed, it has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits. It was not legally possible for the Secretary of State to relinquish his constitutional power of control nor, consistently with responsibility to Parliament, could he delegate it. But it has been his constant endeavour to restrict its exercise to a minimum to keep even its existence as far as possible in the background, and to allow to the Indian Government the

reatest possible freedom of action under the influence of their Legislature and of public opinion.

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits even though as has occurred in some instances it brings her into conflict with His Majesty's Government. In the event of such conflict within those limits the Secretary of State acts if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but rather with the consent of his colleagues of His Majesty's Government he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League in the annual session of the International Labour Conference and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-League International Conferences including the Washington Conference on Naval Armaments in 1921, the Geneva Economic Conference in 1922 and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies, e.g. the Governing Body of the International Labour Office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation.

The personnel of the Indian Delegates has from the outset largely been Indian in race though owing to the constitutional organization of the Indian administration it has frequently been necessary for her to be represented by

Englishmen. This has especially been the case when specialised experts were required. The Indian character of the personnel has as rapidly as possible been increased and in 1929 the Indian Delegation to the annual Assembly of the League was for the first time led by an Indian (The Hon. ble Sir Mohammed Habibullah, Member for Education, Health and Lands in the Executive Council of His Excellency the Viceroy and Governor General).

The Secretary of State in his Memorandum to the Statutory Commission Party wrote—India's membership of the League has had the effect of stimulating her national self-consciousness and has laid the foundations of an informed public interest in international affairs.

India's representatives have not confined themselves merely to the role of spectators, but have played a prominent part in many of the meetings which they have attended. She has fully justified her position as a separate Member of the League by her co-operation in the economic and social spheres which form so large a part of its activities. But in certain questions where special Indian interests are involved the Indian Delegation can and does take an independent line, and may even find itself in opposition to other parts of the Empire. But sometimes on non-political questions the British and Indian Delegations have remained in opposite camps. On such questions when special Indian interests are at stake India's right of independent action extends to speaking and voting against the views advanced on behalf of His Majesty's Government. Lord Reading in a note at the end of his Viceroyalty stated his conclusion that the system of consultation between the Secretary of State and the Government of India had worked satisfactorily and that the Government of India without any deflection of its problematical rights, already in practice obtained all the advantages which it might claim.

Labour in India.

During previous years very little authentic information was available regarding Labour in India, and the sections dealing with this question in *The Indian Year Book* were more or less confined to a description of the main Acts in Labour Legislation in India and to such information as could be gleaned from the official Reports of the administration of these Acts and from the Reports published of Enquiries conducted by the Labour Office of the Government of Bombay. With the appointment of a Royal

Commission on Labour in India all Provincial Governments and Railways, and many of the larger labour-employing organisations and Associations of such organisations have made enquiries into labour conditions in their respective territories and jurisdictions and have compiled fairly comprehensive Memoranda for submission to the Royal Commission. Many of these Memoranda have been published, and contain a fund of the most valuable information possible. No one could, of course, be made of

such information as the Governments and others submitting these Memoranda desire to keep confidential. But where descriptions are given of existing conditions which must be known to large bodies of persons in the respective localities concerned and which could easily be obtained by any person enquiring into them, use

has been made of them and every endeavour has been made to make this section as complete as possible by the presentation of essential facts. The Editors of *The Indian Year Book* gratefully acknowledge the sources which have been made use of in the compilation of this note.

GROWTH OF THE LABOUR PROBLEM

India is and has always been a pre-eminent and predominantly agricultural country and 72.98 per cent. of her people are dependent on the soil for their livelihood. Except in a comparatively few cases there is no settled and permanent labour force in most industrial centres in India. The vast majority of industries draw the labour they require from the village—labour which seldom breaks its contact with village life and periodically returns to renew its associations with it. This fact cannot be too strongly emphasised. If it is lost sight of it would be most difficult to understand how large bodies of comparatively low paid men and women can afford to participate in strikes involving complete stoppage of work and loss in wages for periods of half a year. Such strikes would be impossible if Indian industrial labour did not have agriculture to fall back upon as a subsidiary occupation during periods of prolonged industrial disputes.

The emergence of Indian industrial labour as such may be considered to be associated with the year 1880. Its growth and development since that date may be divided for purposes of broad generalisation into four periods: (1) from 1880 to 1915, (2) from 1915 to 1921, (3) from 1921 to 1927, and (4) from 1927 to the present day. The first period marks the growth of factory development with a slow but steady decline in cottage industries. The total number of cotton mills in India rose from 53 to 264 and the number of persons employed from 40,000 to 230,000. The total number of jute mills rose from 22 to 66 and the number of persons employed from 27,000 to 216,000. There was a vast expansion in railways and many new industries were established. Labour was immobile (earnings in agricultural pursuits were comparatively low) and industrialists were able to get all the labour they wanted by tapping the adjacent villages at any rates of wages they liked to offer so long as they were higher than those which could be earned by work in the fields. Both the men and the women employed were considered to be a part of the plant of the factory, child labour was exploited, and little thought was given to the human element behind the worker. Hours of work were excessive, no amenities were provided because the only thing that the worker was expected to do was to work, eat and sleep. The provision of housing was a necessary evil which had to be provided where factories were situated away from towns. The Factories Act was modelled more on the lines of providing against loss of life due to accident rather than from the grinding work which a factory worker was expected to do. The humanitarian employer was considered to be a pest who would ruin industry and all that industrialists thought of was the greatest return which could be obtained from the capital invested.

The second period emerged soon after the outbreak of war. Large contingents of Indian troops were sent overseas, and had to be supplied with adequate clothing and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and materials to the various seats of war. Heavy demands were made by the belligerent countries for raw products. India secured the opportunity which she had been looking for for generations. Her credit expanded, her industries thrived and the returns on capital invested in every branch of trade and industry became phenomenal. Prices soared high. Owing to the influx of large bodies of persons to the towns, housing became hopelessly inadequate and rents rose to such an extent as to call for legislative restrictions. But nobody thought of those who were mainly responsible for the creation of the added wealth of India. Labour was still considered to be that inarticulate part of the plant of the factory which it had always been. The end of the War brought visions of an Utopia. Big commercial and industrial enterprises were floated. Agriculturists were securing high prices for their produce. Labour was in great demand not only in agriculture but also in commerce and industry. The successes which labour met with during the war in demands for increases in rates of wages impelled them to demand further increases with each increase in the cost of living. Where demands were not granted strikes were threatened. The Influenza epidemic of 1918 which swept away large masses of the population of the country created a big gap in the available supply of labour and almost all the strikes of the period for increases in wages were successful owing partly to the necessity for speeding up production and partly to the shortage in the available supply of labour.

The gradual demobilisation of the Armies of the War and the closing up of the various Munitions Works disbanded millions of men and women who rapidly spent the savings secured during the War. The pre-war industries in the belligerent countries could not be reorganised at once. The spectre of unemployment loomed large. Credit fell. With the fall in credit the demand for manufactured articles declined and prices began to show a marked downward tendency. The year 1922 may be considered as the beginning of this period of reaction and depression and the beginning of the third period in the history of Indian industrial labour. Labour all over the world demanded an improvement in the conditions of life and work. The creation of an International Organisation to deal with all questions connected with labour from an Inter-

national point of view and the commitment of India as one of the signatories to the Treaty of Versailles to the ratification and acceptance, as far as possible, of the Conventions and Recommendations adopted by the International Labour Conference have made it obligatory for her to fall into line with the other industrial countries of the world in ameliorating the conditions of labour. The beginning of this period therefore saw a radical revision of the existing Factory Law by an Amending Act passed early in 1922. The existing Indian Mines Act was replaced by another Act of 1923 during which year a Workmen's Compensation Act was also passed for the first time. A Trade Union Act was passed in 1926.

The depression in trade and industry which set in in 1922 has continued ever since and it has never been so acute as it is to-day. Various attempts have been made by all classes of industrialists to reduce the wages of labour in order to reduce costs of production. Concerted action taken by the Ahmedabad Mill owners Association to reduce the wages of operatives in the Ahmedabad cotton mills by 20 per cent with effect from the 1st April 1923 was successful to the extent of an eventual cut of 15.625 per cent being agreed to after a general strike lasting more than two months. A similar attempt made by the Bombay Mill owners Association in 1925 to reduce wages by 11½ per cent was, however, frustrated by a strike lasting for nearly three months which was eventually settled on the removal of the Excise Duty of 3½ per cent on cotton manufactures in India by a Special Ordinance issued by the Governor-General in Council. Similar attempts made in individual concerns in the Districts succeeded mainly for want of effective combination among the workers. No other organised attempts were made to effect reductions in wages. There were several reasons for this. The most important reason was that after the period of the decline in prices had set in after 1920 real wages in comparison with the standard of life of the year 1914, began to improve and labour was determined not to let go the advantage gained in the struggles immediately following the end of the War. This period was one in which a considerable number of Acts in connection with labour were placed on the Statute Book. In addition to these the Government of India had asked Provincial Governments to consider proposals for legislation with regard to prompter payment of wages. The enquiries held in 1926-27 into the question of Deductions from Wages or Payments in respect of fines indicated legislation on the lines of the Truck Acts. It was becoming obvious to the Industrial Employer that Government were most anxious to do all they could to improve labour conditions in India. The employers, as a whole, therefore, did not desire to precipitate matters by insisting on reduction in wages. It was imperative however that something should be done, and done quickly to reduce costs of production. The only way to do this without reducing wages was to ask the worker to do more work during the existing hours of employment so as to enable the employer to dispense with a number of workers and thus to reduce his Wages Bill.

The fourth period beginning with the year 1928 therefore saw the advent of Rationalisation efficient methods of working. Employers particularly those in Bombay city or who posed to ask workers to mind more machines in return for a compensatory increase in wages. Some advanced firms controlling cotton mill agencies actually introduced various efficiency measures in their mills. The introduction of these measures necessitated reductions in the numbers employed. The beginning of this period coincided with the entry of the Communists into the Trade Union movement in India.

When the so called Labour Group of the Indian National Congress failed to obtain acceptance of their ideas by the Congress, they formed in January 1927 a **Workers and Peasants Party** one of whose objects was to promote the organisation of trade unions and to wrest them from their alien control. Communist emissaries were sent out to India by the Third International to further war against imperialism, the destruction of capital and the creed of revolution. The Workers and Peasants Party started a paper called the *Krant* (Revolution) in May 1927 which however had to cease publication at the end of the year owing to financial difficulties. The members of the Party took an active part in the strike of the operatives in the cotton mills in the Sassoon group early in 1928, but their attempts to bring about a general strike in the cotton mills in Bombay failed owing to the opposition of the Bombay Textile Labour Union which had been formed by Mr N. M. Joshi in January 1928. When another great group of mills in Bombay under the agency of Messrs. Currimbhoy, Brahmin and Sons sought to introduce efficient methods of work the Communists saw their opportunity. All the operatives of the Currimbhoy group were brought out on the 16th April 1928 and the Communists, with the help of the turbulent elements in the industry brought about a complete stoppage of work by picketing intimidation and stone throwing in all other mills in Bombay (except two mills at Colaba) by the 26th April. Owing to internal dissensions in another Union of cotton mill workers called the Girni Kamgar Mahamandal they secured the support of Mr A. A. Alwa, its President and formed a new Union called the **Bombay Girni Kamgar Union** on the executive of which several prominent Communists were appointed. The Communists revived the publication of their paper the *Krant* and they were successful, by holding almost daily meetings at which revolutionary speeches were delivered and by the publication of hand bills in capturing the imagination of the workers and keeping the strike going for a period of nearly six months. They also took an active part in the prolonged strikes of the same year in the Tata Iron and Steel Works at Jamshedpur and in the workshops of the Bengal Nagpur Railway at Kharagpur. They actively associated themselves with the strike on the South Indian Railway and they secured an entry into several Unions connected with Municipalities, Port Trusts and other Public Utility Services. After the calling off of the General Strike in the Bombay Mills on the 6th October 1928 they endeavoured to paralyse the cotton

mill industry in Bombay by calling several lightning strikes in individual mills on the flimsiest of pretexts even though the terms of the settlement of that strike required that all disputes between the employers and employed on the interpretation of the terms of agreement should be referred to the Bombay Strike Enquiry Committee which had been appointed by the Government of Bombay to express opinions on the matters in contention.

Bombay has seen few riots and disturbances of the type which broke out in the City on the 3rd February 1929 and which resulted in the death of 149 persons and the destruction of property. The Riots Enquiry Committee appointed by the Government of Bombay found that the origin of the riots was the series of inflammatory speeches delivered by certain leaders of the Girmil Kamgar Union during the General Mill Strike of 1928 and again during the Bombay Oil Strike which lasted from the 7th December 1928 till after the date of the riots.

In 1929 the Girmil Kamgar Union succeeded in calling another General Strike in the Bombay Mills on questions connected with dismissals which they interpreted as a direct attack by the Millowners to undermine the Union. The strike although not so complete in character as the strike of 1928 nevertheless lasted from 26th April to 18th September 1929 and was called off only when the Court of Enquiry appointed by the Government of Bombay under the Trade Disputes Act had reported in unequivocal terms that the whole blame for this strike lay with the Bombay Girmil Kamgar Union. But the Communist group was able to capture the Indian Trade Union Congress at the 11th Session held in Karypur and to force the moderate elements, consisting of Messrs Diwan Chaman Lal, N. M. Joshi, B. Shiva Rao, V. V. Giri, B. R. Bakhale etc. to secede from the Congress on that body passing resolutions boycotting the Royal Commission on Labour in India and the International Labour Conference, by appointing the Workmen's Welfare League a Communist organisation in England as their Agents for Great Britain, and the declaration of independence and the establishment of a Socialist Republican Government of the Working Classes in India.

It is of importance to lay stress on the problems connected with the Communist masses in India. It is true to a great extent that the basic factors underlying the several big strikes which have occurred during the period commencing with the year 1928 were partly economic in character, but they were, at the same time, such as could have been suitably adjusted by organised effort and friendly discussions between the representatives of the employers and the employed. The existence of grievances which, it must be admitted, were bona fide in many cases, have given the Communists the great opportunity for which they have been waiting. The object of the Communists is not so much the welfare of labour as the spread of revolution. Their ultimate aim is the destruction of capital and the replacement of the established Government by a dictatorship of the proletariat. The manner in which they

can achieve this is by penetrating trade unions by calling strikes in industries by unduly prolonging them by putting up strings of preposterous and absurd demands by refusing conciliation or arbitration and by sending masses of workers settling with discontent into the districts to preach their gospel of class hatred and class war to the ignorant masses in the villages of India. Fortunately for the industry many of the avowed Communists are awaiting their trial at Meerut or are in jail. Some of them have now been released from jail and are making frantic efforts to regain their hold on labour unions. But luckily, the good sense of the workers has now begun to prevail and they are allowing little or no quarter to them. The Girmil Kamgar Union has already repudiated the leadership of one of its former Communist leaders and the G. I. P. Railway Union is doing likewise in the case of one of its former heroes.

Royal Commission on Indian Labour

The British Government in consultation with the Government of India appointed on 24th May, 1929, a Royal Commission to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India on health efficiency and standard of living of workers and on relations between employers and employed and to make recommendations. The Royal Commission consists of the Right Honourable Mr. J. H. Whitley as Chairman with the Rt. Hon. Mr. Srinivasa Sastry, P. C. Sir Alexander Murray, K. C. Sir Ibrahim Rahimtoola, K. C. Sir Victor Sassoon, Bart., Dewan Chaman Lal, M. L. A. Miss Beryl M. Le Power, Deputy Chief Inspector Trade Boards England and Messrs N. M. Joshi, M. L. A. A. G. Clow, P. C. S. G. D. Biria, M. L. A. Kabeer ud-din Ahmed, M. L. A. and John Cliff, Assistant General Secretary Transport and Railway Workers Union England as members and with Messrs B. Lal, P. C. S. and A. Dibrin from the India Office, London, as Joint Secretaries. Mr. J. H. Green, M. B. E., is Assistant Secretary. Lt. Col. A. J. H. Russell, C. B. E., M. B. E., was subsequently appointed as a Medical Assessor and Mr. B. R. Deshpande, B. Litt. (Oxon), Senior Investigator of the Labour Office, Government of Bombay was appointed as a Statistician to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the Railways and Associations of Employers and Employed left for England on the 22nd March 1930. The Commission returned on the 11th of October 1930 and after touring Ceylon and Burma, went to Delhi in November. They are at present engaged in writing their Report which, it is expected, will be ready in April next.

The Royal Commission will no doubt make several important recommendations. They have already shown the lines on which many of their recommendations will be made by their close and searching enquiries into the possibilities of devising Unemployment and Sickness Insurance Schemes, the creation by the Central and Provincial Governments of Departments of

Industrial Relations, and the expansion of measures to ameliorate the conditions of industrial labour by the extension of welfare work provision of adequate and sanitary housing and the introduction of measures to protect the health of the workers and their safety from accidents

Industrial Workers in India.

In 1922 India obtained recognition by the League of Nations as one of the eight chief Industrial States in the world. The grounds on which this claim was based are stated in the Memorandum prepared by the India Office which gave the following figures to illustrate the industrial importance of the country —

28 000 000 agricultural work (excluding peasant proprietors), 141 000 maritime

workers lascars, etc., a figure second only to that for the United Kingdom, over 20 000 000 workers in industries including cottage industries, mines and transport, railway mileage in excess of that in every country except the United States

It is impossible to say how far and to what extent the figures given above hold good to-day. The Railways of India alone offer employment to very nearly a million workmen. The number of workers employed in Plantations according to the 1921 Census amounted to over three quarters of a million. The latest figures for the numbers employed in factories are those available in the All India Report for Factories for 1928 which are reproduced in Summary Form in the tables given below —

Growth of Factories

Year	Number of Factories	Average Daily Number of Persons Employed
1921	4 009	1,266 395
1922	4 144	1,361 002
1923	5,980	1 409,173
1924	6,406	1,455 592
1925	8 920	1,494 958
1926	7 251	1 518,391
1927	7 515	1,532,382
1928	7,863	1 520 315

Age and Sex Distribution of Factory Labour

Year	Men	Women	Children	Total
1921	1 010 686	187 596	68 113	1 266,395
1922	1,086,457	206 887	67 658	1 361,002
1923	1,113 508	221 045	74 620	1 409,173
1924	1 147 739	230 192	72 521	1 455,592

MIGRATION

The industrial centres in India are not able to supply the necessary labour that is required for industrial undertakings and there is consequently a considerable amount of migration from other parts of India to such centres. The extent of this migration is given in detail in Chapter III, Vol. I. Report of the Census of India for 1921, as follows:—The labour reserves are found chiefly among the lower classes of the centre and south of the country. The centre supplies the tea plantations and mining industries of the Eastern provinces the south meets the southern industrial demand, and the bulk of the Burmah and overseas demand while the more technical industries in the cities of the Western provinces are supplied chiefly from the neighbouring agricultural tracts.

Among these provinces and States which attract a larger number of emigrants from other provinces and States are Assam Bengal Burma, Bombay Mysore, Central Provinces and Berar and Punjab and Delhi. According to the 1921 Census there were nearly a million and a quarter immigrants in Assam as against 75,000 emigrants in Bengal there were more than a million and three-fourths immigrants as against about a quarter of a million emigrants. Bombay gained a little over a million but sent out 568,000 to the other provinces. The population figures for Central Provinces and Berar and Punjab and Delhi shows number of immigrants amounting to more than 600,000 in each case. The number of emigrants from the Central Provinces and Berar amounted to a little more than 400,000 and from Punjab and Delhi to half a million. In all these cases industrial and other employers were not able to recruit their requirements from their own territories. The position, however, is vastly different in the case of Bihar and Orissa, the United Provinces, Madras, Rajputana and to a small extent Hyderabad (Deccan). The number of emigrants from Bihar and Orissa amounted to nearly two million as against 387,000 immigrants with a net loss of over a million and a half to the province. In the case of the United Provinces there were 1,400,000 emigrants as against a little over 400,000 immigrants with a net loss of nearly a million. Madras lost nearly a quarter of a million and Rajputana 820,000.

Within the Provinces.—It is neither necessary nor feasible to deal with the various streams of migration between district and district of the same province or within a district. These movements vary according to times and seasons, but it may be useful to show the extent to which and the source from which some of the more important industrial centres draw their labour force.

In Bombay according to the Census Report for the year 1921 the percentage of the total population which had actually been born in the City has steadily declined at each census. In 1873 the percentage of the persons born in Bombay to total population was 31.1 in 1891 25 in 1911 19.6 and in 1921, 16. An important point however, to remember in considering these figures is the fact that, whenever possible, workers send their wives to their native places

for purposes of confinement. Many of those returned in the Census as having been born outside the city are not really fresh immigrants in the strictest sense of the term because they are the off-spring of the parents already residing in the city. According to the figures given in the 1921 Census Report for the numbers of immigrants into Bombay city it is seen that 235,566 or 20 per cent of a total population of 1,176,914 came from the Bhatnagar District. Poona district supplied 89,231, Kathiawar 72,485 and Satara 65,953. Among the provinces which contribute to the population of Bombay City the United Provinces comes first with 70,911. The sex ratio is only 926 females to 1,000 males as compared with a ratio in the Presidency as a whole of 919 females to 1,000 males. The figure of 52.2 for Bombay City may be compared with a big non-industrial city of Poona where the figure is 912. In a recent enquiry made by the Labour Office into the length of service of mill workers which covered 1,400 millhands it was found that not one of them had been born in Bombay City, 63 per cent were born in the Konkan and 27 per cent in the Deccan the remainder coming from different parts of the country.

Certain figures regarding birthplaces of the workers in Ahmedabad were obtained during the Family Budget Investigation conducted there by the Labour Office in the year 1923. These figures together with those obtained at the Census of 1921 and enquiries made from Mill Officers and the Labour Union officials at Ahmedabad show that the cotton mill workers of Ahmedabad come from different places in the proportion of 20 per cent from the City itself, 25 per cent from the Ahmedabad district excluding the City 20 per cent from Baroda State 10 per cent from Rajputana, 10 per cent from the Gujarat Division excluding the above 5 per cent each from Kathiawar the Deccan and the Konkan combined and from other places including the United Provinces, the Central Provinces, Madras etc.

In Sholapur the labour force is mainly local and it is immigrant to a very small extent. The figures collected as a result of the Family Budget Enquiry conducted by the Labour Office of the Government of Bombay in that centre in the year 1925 show that 60 per cent of cotton mill workers in the City were born in Sholapur 32 per cent in the Deccan and about 8 per cent in the rest of India.

Calcutta, like Bombay relies on imported labour. But the imported labour there does not come from the same province as in Bombay but from other provinces. This is mainly due to three reasons. Firstly, the fertility of the land in Bengal secondly the immobility of labour and lastly the aversion of the average Bengalee to factory work.

The Census figures of 1921 show that just less than a quarter of the inhabitants of Calcutta and the Suburban Municipalities of Coimbatore, Manikotah, Tollygunge, the South Suburbs, Garden Reach and Howrah were born in the city while rather less than a quarter or 22.25 per cent were born in the neighbouring areas of 25 Parganas and Howrah, and that rather more than half were born further afield.

Nearly 35 per cent came from other provinces Bihar and Orissa supplied nearly one in five and the United Provinces one in ten of the total population of the City. 183 females accompanied every 1,000 males from Bihar and Orissa, 327 to 1,000 from the United Provinces and 813 females to every 1,000 males from Madras. In the other mill towns of Bengal only about one-fifth of the total population was born in the area surrounding the towns. In Titagarh a compact manufacturing area no less than 90 per cent of the inhabitants were born outside Bengal. The figures for the number of females to 1,000 males in Calcutta were 552 in 1872, 566 in 1881, 526 in 1891, 507 in 1901, 475 in 1911 and 470 in 1921. This is very largely due to the influx of single male workers who have left their families behind.

The position of Jamshedpur in many respects is unique in India. What was a dense jungle a little more than twenty years ago is now a town of over 100,000 inhabitants and a great industrial area. The Tata Iron and Steel Company Limited is not only an employer of labour but is also landlord and provides municipal services. The operatives in the iron and steel works are drawn from every province of India and from a very large number of districts. On the 5th July 1929 out of a total labour force of 15,917 persons employed, 1,190 came from all districts in Bihar and Orissa, 1,810 from the United Provinces, 2,076 from Bengal, 1,327 from the Central Provinces, 1,482 from the Punjab and the North West Frontier Province, 889 from Madras, 310 from Bombay, 275 from Assam and 221 from independent States and foreign countries.

In the Jharia coalfields a committee appointed in 1917 found that 15 per cent of colliery labour was settled and that most of it was Santal labour, 75 per cent came for weeks or months together and lived in *Dhokras* provided in mines and that there was no sign of a labour force divorced from agriculture coming into existence.

Cawnpore, the principal industrial town of the United Provinces is in a very curious position. It not only imports labour for the various industries which are to be found there but also exports it to surrounding districts and to other provinces. Any shortage of labour that it experiences is satisfied from the densely populated districts which surround the city.

The mobility of Indian labour is of an ideal advantage to the agricultural population as it helps to relieve the increasing pressure on the land. In India the movement of labour between province and province is entirely unrestricted by Government with the exception of the movement of labour from certain pro-

vinces to eight districts in Assam, viz., Lakhimpur, Sibsagar, Nowgong, Barrang, Kamrup, Golpara, Cachar and Sylhet. These districts are known as labour districts and under the Assam Labour and Emigration Act No VI of 1921 as amended by Act XI of 1908, Act VIII of 1915, Act XI of 1915, Act XXXVIII of 1920 (Devolution Act) and Act XXXI of 1927 the provinces of Madras, Bengal, the United Provinces, Bihar and Orissa, the Central Provinces and Assam can, by notification in the local official Gazette, prohibit all persons from recruiting, engaging, inducing or assisting any native of India or any specified class of natives of India to emigrate from the whole or any specified part of the province to any labour district or any specified portion of any labour district, either absolutely or otherwise than in accordance with such of the provisions of the Act as may be specified.

The following are the main types of migration of Indian Labour—

- (1) Casual migration consisting of movements between adjacent villages,
- (2) Temporary movements of labour on works of construction or by exigencies of trade or the stress of famine, business journeys, pilgrimages, etc.
- (3) Periodic migration owing to the seasonal demands for agricultural labour,
- (4) Semi permanent migration when the inhabitants of one place migrate to another for trade but return at intervals to their native place where they sometimes even leave their families and spend their declining years and
- (5) Permanent migration where economic or other reasons have caused a permanent displacement of population.

In the first three cases the emigrants invariably return to their villages. In the fourth and fifth cases the majority of workers return for a short visit after two or three years but there is a considerable minority which has settled down at the industrial centres in which they have worked. Evidence is however overwhelming that owing to the home loving character of the Indian worker he seldom or never breaks his contact with his village home. The number of workmen of rural origin who have severed their connexion with their village and with agriculture is very small and is usually confined to such skilled workers as have left their homes permanently to settle in the important centres of factory industry. As the large majority of workers return home annually or biennially there is little disturbance of family life, except in the case of Assam where the system of recruitment now in force directly encourages the importation of families and women are almost as numerous as men in the residential labour population on the tea estates.

RECRUITMENT OF LABOUR.

The methods adopted for the recruitment of labour in India have received general condemnation even from employers. The Indian Textile Board (Cotton Textile Industry Enquiry) which was appointed by the Government of India in 1926 *inter alia*, to investigate the condition of the cotton textile industry in India with special reference to the industry in Bombay

and Ahmedabad and to make recommendations dealt with the question of recruitment of labour in the following terms—

It was urged in evidence before us, that the system of recruitment of labour in Bombay leaves much to be desired and does not tend to efficiency as it places too much power in the hands of the jobber or foreman who recruits not neces-

early the most efficient man but the one who is willing to pay him the largest commission or in whom he is otherwise interested. The Mill owners' Association, on the other hand whilst admitting that the present system furnishes openings for corruption hold that it is the only possible system in Bombay conditions, as the jobber is in touch with labour to an extent that no official of the mill can possibly be and that it does not necessarily follow that because a jobber produces men, they are engaged by the mill. They further contend that it is not always possible for all vacancies to be filled from the applicants waiting at the mill gates for employment and that, when this is the case, the only course open is to send out jobbers to the homes of the operatives to collect men. This should however only be necessary in abnormal conditions. We are of opinion that the present system is undoubtedly open to the objection that it places too much power in the hands of the jobber and that it is desirable that all labour should be engaged directly by the officer of the mill in charge of the department which requires it or by a responsible assistant. This we were told was the practice in Ahmedabad and in most of the up-country centres we visited and we see no reason why it should not be followed in Bombay.

Recruitment, except in the case of special apprentices and higher paid workers employed on railways, is effected either through Sardars (Recruiters) or Contractors, or direct at the mill or factory gates. The difficulties in connexion with recruitment are due (1) to the want of a stable labour force at any particular town or centre, (2) to the general illiteracy of the Indian labourer, and (3) to the inherent attachment of the worker taking up industrial employment to his village life and home.

The contractor is sent out to overcome the innate conservatism of the Indian peasant. He is helped in his work by the poverty and indebtedness of the peasant and also by occasional bad harvests, but in addition he not infrequently indulges in fraud and misrepresentation by painting a rosy picture of the future that awaits the peasant in a town with its crowded bazaar and other amusements, which are absent in the village. The essence of the system is the payment of an advance to the prospective labourer in order to enable him to free himself from his pecuniary difficulties. The contractor retains some form of control over his recruits and takes good care to recover the amount of the advance together with the interest, which is generally calculated at an exorbitant rate. Generally, the employers do not deal directly with the labourers recruited by a contractor. The latter is paid a lump-sum from which he pays his men and retains a portion for himself. In the Central Provinces, however, it is reported that labour is actually purchased from private contractors at so much per head. The system of recruitment by contractors is most in use in Burma, owing to the scarcity of labour in that province and the necessity of recruitment from distant places. Practically all the unskilled labourers in most of the mills in Burma are mistry coolies, i.e., coolies who are recruited and paid by the employers' labour contractors or mistrys. The general practice is for the employer to enter into a contract with a mistry for the supply of unskilled labour for the various operations carried on in the mills. In most

contracts, no mention is made of the number of workmen required the mistry agrees to supply labour as and when required at the piece-rates laid down in the contract. Sometimes the contractor sublets his contract to another person who may even be unknown to the employer. The person who arranges for the supply of labour at the mills is known as the head mistry, and the work is executed through sub-mistrys who pay premia to the head mistry for the privilege of getting the work. It is the sub-mistrys who either themselves come to India or send their agents to negotiate with prospective recruits. They make the necessary advances and on arrival in Burma their recruits are made to sign promissory notes for sums never less than the total amount spent on them. The payment of advances has become somewhat risky since the repeal of the Workmen's Breach of Contract Act and the system of recruitment through contractors is therefore gradually losing its importance. An increasing number of Indians go to Burma on their own and seek employment independently of mistrys. Generally they form themselves into gangs, each of which nominates a leader from among its members. The gang moves about in search of work and its leader usually arrives at an arrangement with a head mistry by which the latter secures work for the gang and pays what is known as *bucksheesh* which is first given as a loan but is eventually treated as a gift if the gang remains in service under the head mistry until the close of the busy season. These *bucksheesh* coolies are paid at the same rates as the coolies recruited from India.

The method of recruitment through Sardars is also dependent on the payment of advances, which however are made at the cost of the employer. The Sardar is an operative already on work in the mill or plantation and is sent out to recruit labour from among his relations acquaintances or neighbours. He is drawn therefore from the same class as the recruits themselves and can therefore be relied on to deal more fairly with them. Another advantage of this system of recruitment is that the men recruited are insured against unemployment and find work waiting for them at their destination. On the other hand it does not infrequently happen especially in the Tea Gardens in Assam that the Sardar remits persons who are lured away from their homes by prospects of a bright future and who, on arrival find that conditions of work and wages are not so bright as they imagined. It is, however only in plantations that this form of recruitment has been used to any appreciable extent.

The recruitment of labour at the mill gate or at the surface of mines is the form of recruitment which is gradually gaining in importance over the other two methods. The news of the very much higher rates of wages paid in towns (which to the village sounds fabulous as he has no idea of the higher cost of living) spreads through out the countryside and draws large crowds of would be workers. They are to be found at convenient gathering places on the thoroughfares waiting to be picked up for employment. The older hands also return from their village with groups of friends, relations and neighbours who come in the hope of finding employment in the mills. But the ignorance, simplicity and poverty of the Indian peasant render his exploitation all the easier. The employer does not

recruit himself the men required for his establishment but holds the overseer, jobber or mukadam responsible for the adequate supply of labour in the department. The latter takes the place of the contractor and exacts bribes from the new recruits. He also acts as a money-lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organisation are the only means by which Indian workers can escape from the clutches of intermediaries who like harpies are ever ready to prey on them.

In the coalfields in Bihar and Orissa unskilled labour is recruited by means of Sardars. The Sardar visits villages and brings the labour with him and the labour brought by him forms his gang. He has to pay the labour *bachakseeh*, *khormi* and travelling expenses and for this purpose he frequently receives advances either from the contractor or from the Company concerned. At the Bhowra colliery advances varying from Rs 3 to Rs. 10 are paid to the recruits in addition to their travelling allowances and food. Such advances are seldom recovered and never if the gang maintains good attendance at work. The Sardar obtains remuneration for his services in various ways. Sometimes he is paid a commission and a salary, but generally he is paid a certain amount on each ton of coal raised by miners working in his gang. Independent recruiters are paid at 9 pies per tub raised. In the Central Provinces the recruiters or mukadams as they are called receive 3 pies per head per week from the individual labourers whom they recruit and wages from the employers.

The Tata Iron and Steel Company at Jamshedpur maintains an Employment Bureau where skilled and unskilled workers are registered and employed. Applicants for work assemble in a yard and daily requirements are selected by the officer in charge. No outside recruitment is done in the literal sense of the word but in the event of special qualifications being required and no applicants being available the post is advertised in a few leading newspapers.

The methods adopted by different Indian railways for the recruitment of unskilled labour are generally the same as those which obtain in other industries. In the case of workshop men a trade test is generally given and in every case a medical examination has to be gone through. Special apprentices for the higher grades are engaged by all Railways. The terms and conditions attached to apprenticeship in most cases are similar.

Recruitment for Assam.—It has already been stated that the Assam tea industry is the only industry which is controlled in its recruitment of Indian Labour. Other industries, and even the tea industry in the Duars, Darjeeling and Madras Presidency are free from Governmental control. There is a considerable body of opinion in favour of freeing the Assam tea industry from control, but the Indian Tea Association is not only not in favour of this but has definitely urged that Government control should continue. The Association contends that if recruiting were free, abuses would arise as they did in the past from the competitive spending of money to secure labour. There appears little doubt that if control were removed, all the abuses which were associated with the *Arakati* system of recruitment would be revived.

The present system of recruitment is controlled by Act VI of 1901 called the Assam Labour and Emigration Act, 1901, as amended by Act XI of 1908, Act VIII of 1915, Act XI of 1915, Act XXXVIII of 1920 (Devolution Act) and Act XXXI of 1927. The Act extends to the Provinces of Bengal, Bihar and Orissa, United Provinces, Central Provinces, Madras and Assam. In the Bombay Presidency Act No VI of 1901 is not enforced. There the Government of Bombay have allowed recruitment provided the emigrants are produced before a Magistrate. The most important provision of the Amending Act of 1915 is the abolition of the system of recruitment by contractors and their recruits, commonly known as *Arakatis*. In all recruiting areas, where the provisions of Act VI of 1901 are in operation except the local areas in which recruitment is prohibited by notification under section 3, recruitment is carried out only through the medium of garden sirdars under the provisions of Chapter IV working under a local agent duly licensed under section 64 of the Act. The only recruiter now recognised is the sirdar who must himself engage the coolies. Any arrangement for the direct supply of coolies to a tea estate by a contractor or for the supply to sirdars of coolies collected through the agency of a contractor or *arakati* would be illegal and would render every person who is a party to such an arrangement liable to prosecution and punishment under section 184 of the Act. Even an employer cannot himself legally engage labour in a recruiting district, he must do so through the agency of his garden sirdars. In the Bombay Presidency, agents other than garden sirdars are allowed.

Latest Statistics.—The Annual Report on the working of the Assam Labour Board during the year ending the 30th June 1929 has been published. The Report shows that the total number of persons recruited during the year was 73,198 as against 39,549 in the previous year. The average number of recruits per sirdar was 1.63 as compared with 99 for the year ending 30th June 1928. This very favourable recruitment during the year under report was due to scarcity and famine in various parts of the country. The average of advances to garden sirdars for each adult recruit fell in 20 and rose in 15 agencies as compared with the preceding year. No cases occurred in which the local Agents were found to be extravagant or indiscreet in the matter of giving advances to sirdars. The total number of garden sirdars prosecuted for offences in connexion with recruitment was 75 as compared with 85 in the previous year. The rate of cess on garden sirdars and emigrants was Rs 1-8-0 per head during 1928-29. The actual receipts from the cess amounted to Rs 1,55,720.

Reforms in the Bombay Cotton Mill Industry.—In a circular letter dated the 8th January 1930 the Bombay Millowners Association have instructed all mills affiliated to the Association to introduce, wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. The introduction of a system for providing Discharge Certificates to operatives leaving service has also been recommended. The certificates are to contain a record of the

per cent between the 20th and the 30th year and the remaining 9 per cent joined the first mill after they had attained the age of 30.

Sixty-three per cent of the workers were born in the Konkan and 27 per cent in the Deccan while the rest came from different parts of the country. Not a single worker gave his place of origin as Bombay City.

About 48 per cent. of the workers covered by the sample continued in the employment of the same mill without change, 34 per cent. served in two or three mills and 18 per cent. had served in 4 or more mills. The highest number of mills served by an individual was 15. The cause of leaving the mills was "for going to native place" in 26 per cent. cases, low wages and for bettering prospects in 21 per cent. cases, absence due to illness in 14 per cent. cases and retrenchment in 10 per cent. cases. Other causes for leaving mills were unsuitable conditions of work, dismissal, strike, resignation, etc.

The approximate period of total service (including the period of non-attendance) was reported to be less than 5 years in 87.54 per cent. cases, 5 to 10 years in 23.57 per cent. cases, 10 to 15

years in 15.88 per cent. cases, 15 to 20 years in 8.15 per cent. cases and more than 20 years in 14.08 per cent. cases. The percentages of workers who had not changed mills was 67 in the case of operatives with less than 5 years service and 48 for workers with 5 to 10 years service. In the other service groups, the percentage of operatives working in the same mill varied between 25 and 45.

The actual active service was reported to be less than 5 years in 46.51 per cent. cases, 5 to 10 years in 24.26 per cent. cases, 10 to 15 years in 18.95 per cent. cases and 15 to 20 years in 7.20 per cent. cases. In the remaining 8.08 per cent. cases the actual service was more than 20 years.

A large number of workers in the age groups 15-20 and 20-25 had served for a period of less than 5 years while the most common period of service in the age group 25-30 was between 5 and 10 years. In the age group 30-35 about 30 per cent. of the workers had served for less than 5 years and 19 per cent. for a period of 5 to 10 years. Among workers of 35 to 40 years of age, the number of those falling in each of the first five service groups was between 16 and 20 per cent.

LABOUR IN FACTORIES.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1891, as amended in 1891. Under the chief provisions of the amended Act Local Governments were empowered to appoint Inspectors of Factories and Certifying Surgeons to testify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half. Their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to 7 and their employment at night-time was forbidden. Children below the age of 9 were not to be employed. Provision was made for fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

The next Factory Act to be passed into law was Act XII of 1911. This Act extended the definition of 'factory' so as to include seasonal factories working for less than 4 months in the year, shortened the hours within which children, and, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton spinning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act, for the first time, applied a statutory restriction to the hours of employment of adult

males by laying down that, subject to certain exceptions, 'no person shall be employed in any textile factory for more than 12 hours in any one day.' It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, which were factories worked in accordance with an approved system of shifts) no person may be employed before 5.30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Acts now in force.—The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during 1921 and the Indian Factories Amendment Act, 1922 introduced a series of important reforms including the adoption of a 40-hours week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of the exempting provisions, etc. The principal object of the amending Act of 1922 was the removal of a difficulty which had arisen in connection with the law relating to the weekly holiday. The experience gained during the three years which immediately followed the revision of the Act in 1922 indicated that the amending Act had worked smoothly and that the main principles followed in 1922 commanded general acceptance. It was not considered necessary, therefore, to modify any of the main principles of the Act, but several administrative difficulties had arisen in connection with some sections of the Act—one such difficulty relating to Section 21 which provided for intervals. Local Governments were asked in June 1923 to consider a possible solution of the difficulty and to bring to the notice of the Government of India any difficulties which might have arisen.

in connection with other provisions. On receipt of their replies, a conference of Chief Inspectors of Factories was convened. The conference recommended a number of alterations designed by allowing greater elasticity in some directions and by increasing control in others in order to make for smoother working. The Factories Amendment Act of 1926 was, therefore, passed on the recommendations of that conference and on the opinions received from the Local Governments. The more important alterations effected include the widening of the definition of factories so as to bring within the control of the Act such establishments as Electrical Generating Stations, water works, etc. the prevention of the issue of age certificates by Certifying Surgeons to children who are not fit for employment, the prevention of cleaning machinery in motion, even by men in cases where Local Governments were of opinion that the work is attended by danger to the operatives, a clearer definition of the periods prescribed for intervals of rest, and while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

Hours of Work.—The Indian Factories Act prescribes a daily as well as a weekly limit to the hours of work in factories and provides for rest intervals and for a weekly holiday. Section 25 of the Act provides that no person shall be employed in any factory for more than 11 hours in any one day and Section 27 provides that no person shall be employed in a factory for more than 48 hours in any one week. Section 21 of the Act makes it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours, or at the request of the employees concerned two rest periods of half an hour each at intervals not exceeding 6 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned the rest interval may also be reduced to half an hour for each male person provided that he is not employed for more than 34 hours on each working day and is not required to work for more than five hours continuously. For children Section 23 (c) provides that no child shall be employed in a factory for more than 6 hours in any one day. Section 21 (b) provides that for each child working more than 6½ hours in any one day a period of rest of not less than half an hour shall be given and the period of rest has to be so fixed that no child shall be required to work continuously for more than 4 hours. Sections 23 (b) and 24 (e) further provide that no child or woman may be employed in any factory before half past five o'clock in the morning or after 7 o'clock in the evening. Under Section 25 a child cannot be employed in two factories on the same day but adults may be so employed in such circumstances as may be prescribed. Under the provisions of Sections 25 every Manager of a factory has to fix specified hours for the employment of each person employed in such factory and no person is allowed to be employed except during such specified hours. The Governments of Madras, Bombay, the United Provinces, the Punjab and

the Central Provinces are the only Local Governments which have prescribed the circumstances under which adults may be employed in more than one factory on the same day. The rules framed by these Local Governments invest the Inspector of Factories with the power to sanction such employment if he is satisfied that the adults concerned are not employed for more than 10 hours on any one day and that they received the weekly holiday prescribed by Section 22 of the Act. In addition to the notice of 48 hours of work for particular period every factory has to maintain a register of all persons employed in a factory in the form prescribed by the Local Government showing their hours of work and the nature of their respective employment.

The latest statistics available in connection with the administration of the Indian Factories Act are for 1928. The data published in connection with the normal weekly hours of work show that for the whole of British India men were required to work for more than 54 hours a week in 45,651 factories, above 48 and not above 54 in 1,024 factories and not above 48 hours per week in 2,164 factories. In the case of those factories employing women 3,042 required female workers to work for more than 54 hours per week whereas 1,650 fixed their hours at below 48 per week. 740 factories had hours above 48 but not above 54. Out of the 1,453 factories employing children, 498 had hours below 30 for children and 855 above 30 but not above 36—the maximum permitted by the Act. The details in connection with the various provinces will be found in summary form in the All India Factories Reports or in a more detailed form in the Provincial Reports themselves. The statistics of factories do not show the hours of work in particular industries.

All railway workshops come under the Indian Factories Act. Hours of work in railway work shops in all provinces are generally average 8 per day and 48 per week. In most cases the hours are so arranged as to provide for a half day off on Saturday provided that a total of 48 hours is worked during any particular week.

With regard to intervals for rest 5,551 factories out of a total number of 7,863 factories registered in India in 1928 observe an interval of one hour.

Proposed Change for the Bombay Cotton Mills.—The Indian Tariff Board (Cotton Textile Industry) recommended that a minor, but in their opinion a very essential reform which should be immediately introduced into Bombay mills is the fixation of a definite period of rest to enable the operatives to take their morning meal. The Board were greatly struck during the inspection of the mills by the number of operatives they found taking food in the mill compounds an hour or two after the commencement of work. In their opinion this materially affected efficiency and they were of opinion that the commencement of work should be put back to 6.30 a.m. a period of rest of half an hour being granted from 9 a.m. to 9.30 a.m. or 9.30 a.m. to 10 a.m., to permit of meals being taken. In accordance with this recommendation the Bombay Millowners Association in the standardised Standing Orders which they proposed to introduce in all cotton mills in Bombay affiliated to the Association formulated

a rule that the hours of work for adult operatives would be from 7 a.m. to 9-30 a.m., 10 a.m. to 1 p.m., and 1-45 p.m. to 6-15 p.m. with two recesses from 9-30 a.m. to 10 a.m. and from 1 p.m. to 1-45 p.m. These Standing Orders formed one of the references to the Bombay Strike Enquiry Committee. This Committee endorsed the opinion of the Tariff Board that a morning recess was desirable but they did not consider it reasonable that the millowners should reduce the present number of working hours from 10 in order to enable this recess to be provided, so long as there is no general reduction of that kind made for all factories by legislation or otherwise. Nor, on the other hand, did the Committee think that the millowners could reasonably insist on the operatives reducing the mid-day hour recess and stay in one quarter of an hour longer in the mill in order to enable the half hour morning recess to be given. The Committee proposed a modification of this order.

Holidays.—Section 22 of the Act provides that no person shall be employed in any factory on a Sunday unless (a) he has had or will have, a holiday for a whole day on one of the three days immediately preceding or succeeding the Sunday and (b) the Manager of the factory has previous to the Sunday or the substituted day, whichever is earlier given notice to the Inspector of his intention so to employ the said person and of the day which is to be substituted and has at the same time, affixed notice to the same

effect in some conspicuous place near the main entrance of every factory, in English and in the language of the majority of the operatives in such factory. Sub-clause 3 of this section further provides that where any person is employed on a Sunday in consequence of his having had a holiday on one of the three days preceding that Sunday, that Sunday shall, for purposes of calculating the weekly hours of work of such person be deemed to be included in the previous week. The statistics of factories for 1927 show that holidays were granted on Sundays in 3,091 factories and on week days and Sundays in 3,704 factories.

Employment of Children.—By the Amending Act of 1926 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12. Section 23 of the Act provides that no child shall be employed in any factory unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate. Further no child is allowed to be employed in any factory before half past five o'clock in the morning or after seven o'clock in the evening and no child is to be employed for more than six hours in any one day. The number of children employed in factories during the years 1921 to 1928 is shown in the following table—

Year	Boys.	Girls.	Total.
1921	56,986	11,187	68,113
1922	56,552	11,106	67,658
1923	61,841	12,779	74,620
1924	60,240	12,291	72,531
1925	57,199	11,226	68,725
1926	50,015	10,079	60,094
1927	48,022	9,534	57,552
1928	42,906	7,915	50,811

The decrease in the number employed since 1921 has been a little over 251 per cent. Whilst the total factory population rose during the same period from 1,266,935 to 1,320,315 or by 17 per cent and the total number of factories increased from 4,059 to 7,563 or by 84 per cent. The reduction in the number of children employed would have been much greater had it not been for the fact that the revision of the Indian Factories Act in 1923 brought a number of seasonal factories which employed a larger percentage of children than perennial factories under the scope of the Act. An examination of the figures in the above table will show that the number of children employed rose from 67,658 to 74,620 in 1923. This was due to the fact that the tea factories in Assam which employed about 11,000 children were brought within the scope of the Act for the first time in that year. Further, the amendment of the Act in 1925 did not apply to children who were lawfully employed in a factory on or before the 1st July 1921 and it was not until 1924 that full effect was given to the new restrictions for children.

Employment of Women.—The number of women employed in factories during the years

1921 to 1928 has increased steadily from 187,596 employed in 1921 to 252,933 employed in 1928 or by 28 per cent. The total factory population during the same period rose as has been shown above, by only 17 per cent. The large increase in the employment of women is due partly to the restrictions imposed on the employment of children and partly to the inclusion within the scope of the Act of all quasi agricultural factories for example in the tea gardens which are dependent on female labour to a larger extent than other factories. An important change which the revision of 1923 made in connection with the employment of women was the repeal of Section 27 of the Act of 1911 which permitted the employment of women at night in spinning factories. In view of this amendment the Government of India considered that they were in a position to ratify the Convention concerning the employment of women during the night adopted by the First International Labour Conference held at Washington in 1919 without undertaking any further legislation.

Exemptions.—Section 31 of the Indian Factories Act provides that in those factories where exemptions are granted from the provision that

no person shall be employed in a factory for more than 60 hours in any one week every person employed in such a factory for more than 60 hours in any one week shall be paid, in respect of overtime worked at a rate which shall be at least one and a quarter times the rate at which he is normally paid in most of those factories which work normally less than 60 hours per week overtime is paid for at normal rates up to 80 hours per week and at a time and a quarter for overtime work over 80 hours. Some factories,

however, pay either the full time and a quarter rate to be granted under the Factories Act for all overtime worked over and above the normal daily hours or even grant higher rates irrespective of the weekly limitation of 60 hours under the Act. No detailed statistics are available to show the number of workers who were paid overtime during any particular period except in the case of a few Railways and some of the larger industrial organisations.

LABOUR IN MINES

The conditions of employment of labour in mines are governed by the provisions of the Indian Mines Act, 1923 which came into force with effect from the 1st July 1924 replacing the former enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. Labour in the mines was subject therefore to no restrictions in regard to hours of work, holidays, etc. The question of amending the old Act was brought to a head in 1923 by the introduction of the Reforms Scheme under which the regulation of mines became a Central Subject. As the then existing Act made no clear distinction between the functions of the Central Government and those of the Local Government in regard to its administration, a line of division between the two was considered necessary. It was proposed that the Central Government on whom the duty of regulating mines and securing the safety of workers devolved should have power to deal with the technical administration of the Act while Local Governments would deal with minor matters of administration in their respective provinces. Further, the acceptance by the Government of India of certain conventions passed at the International Labour Conference held at Geneva in 1919 necessitated the regulation of hours of employment and of the employment of children. In accordance, too, with the recommendation of the third Session of the International Labour Conference a weekly day of rest was to be provided. And the experience of the working of the Act of 1901 showed that the existing definitions of a 'child' and of a 'mine' required revision. A Bill to amend and consolidate the law relating to the regulation and inspection of Mines was therefore introduced in the Legislative Assembly on the 13th September 1922 with a view to make provisions for the above matters. The Bill was referred to a Joint Select Committee of 18 members representing both Houses of the Central Legislature and the report of the Committee was published on the 18th January 1923. The most important question which came before the Committee was that of the exclusion of women from mines. The extent to which coal mines in particular depended on women's labour was a main factor which weighed against any proposal for immediate exclusion of women from the mines. The Joint Committee so amended the Bill as to provide that the power to exclude women should rest with the Government of India and they recommended that the question of the employment of women below ground in mines should be taken up at a very early date with a view to prohibiting such employment either in all mines or in

particular classes of mines at the end of a specified period. When the Bill as amended by the Select Committee came up before the Legislative Assembly for discussion on the 29th January 1923 many important amendments were moved. Of these one relating to a proposal to impose a daily limit on hours of work involved a considerable amount of discussion. A suggestion was made that a compulsory shift system might be introduced in order to bring about an automatic restriction on the daily hours of work. The Coalfields Committee who investigated the question reported that the enforcement of such a system in existing conditions would be premature. The Government of India indicated that they would make a reference to Local Governments regarding the possibility of introducing a statutory system of shifts. The Assembly, thereupon, passed the Bill as it emerged from the Select Committee and the Act received the assent of the Governor General on the 23rd February 1923.

Working of the Act.—The Annual Reports of the Chief Inspector of Mines in India show that Section 26 which prohibits the employment of children in mines was contravened in nearly every class of mine and in nearly every province in British India in 1925. This was found to be due to a misinterpretation of the Section nearly every one having taken the Section to prohibit the employment of children in underground workings only. With regard to the employment of children underground a common explanation was that the children had been employed for only a few days unknown to the management and had been dismissed as soon as they were discovered. In order to clarify the position the Mining Department issued a circular letter to all mineowners drawing their attention to the requirements of the Act with respect to the employment of children. The prohibition of the employment of children brought into increased prominence the necessity of providing education and facilities for recreation for the young. The prohibition of child labour has however, had no effect on the attendance of women.

The restrictions imposed by the Act in regard to hours of work had practically no effect in the case of the coal mines in Bengal where very few mines worked for more than 4 days in a week or more than 54 hours. Their earnings have not been reduced but their attendances have not increased. The industry did not suffer in the average output per man shift which, as a matter of fact, increased. In Bihar and Orissa the normal hours of work in coal mines varies from 8 to 12. At the Lodna colliery in the Jharia coalfields a system of shifts, two per day with an interval of two hours between shifts

has been in operation for over a year. With regard to the number of days worked in the week, the miner works only on as many days as he feels inclined. The mines are closed generally on Sunday and the miners are paid on that day. The great majority of miners will not work on Monday also. In order to induce the miners to attend on Monday, the Bhagatpalli colliery pays one anna extra per tub for raisings on Monday but the desired result has not been achieved. The main effects of restricting the weekly hours to 60 were (1) a reduction in the number of hours in which a miner remains underground, (2) the supervising staff attendants etc., enjoy a weekly rest day because the mines are closed for one day per week and (3) an additional number of skilled hands, such as pump *shakars* and boiler *shakars*, has to be entertained as it is not convenient to arrange for changes of shift of such workers within the limits of a 54-hour week. The argument that when children were taken out of the mine the women would not go down to work has been falsified and any labour that left the mine on this account was insignificant.

The exclusion of women from mines will not be a hardship to the industry if male labour is recruited for female labour, generally employed as coal carriers, or, if recourse be made to modern methods of loading coal by machinery. The earnings of the miner's family, as a whole, is bound to suffer on account of the prohibition

of women in mines but the loss can, to a certain extent, be made up by more regular attendance. Two large manganese mines in which there is underground working, owned by the Central Provinces Manganese Ore Company, Limited, one in the Balaghat District and the other in the Nagpur District are reported to be hard hit by the new regulations regarding the exclusion of women. In the Madras Presidency women have lately been excluded from work in the mines in certain districts. Owing to this exclusion, 50 per cent of the workers in the Ouddappah District left the mines and secured service elsewhere. In the salt mines in the Punjab women are still employed but the number is being systematically reduced with a view to ultimate abolition. This reform does not appeal to the men. It is stated that "women are at a premium in the Punjab and the more their work is concentrated on the care of the rising generation the better for the province. With effect from October 1926 no woman have been employed in underground workings in Assam but a few were doing light work in open workings or on the surface. The miners in Assam actually worked for only 4½ days in a week, the total hours being shorter than the maximum permitted under the Act.

Number of Mines—The following table gives the number of mines which came under the Act each year, classified according to the minerals raised —

Year	Number of mines					Total Number of all mines
	Coal	Mica	Manganese	Tin and Wolfram	Other minerals	
1924	846	513	186	87	172	1,804
1925	810	571	214	204	212	2,011
1926	722	601	221	210	143	1,897
1927	644	630	220	200	298	1,992
1928	556	674	184	203	331	1,948
1929	548	498	126	186	375	1,738

Number employed—The number of persons employed in mines during the years 1924-1928 were as follows —

Year	Total No of mines which came under the Act	Number of persons employed		
		Below Ground	Above Ground	Total
1924	1,804	167,719	90,496	258,217
1925	2,011	166,554	84,303	250,857
1926	1,897	159,371	70,742	230,113
1927	1,992	196,341	72,949	269,290
1928	1,948	197,296	70,372	267,671
1929	1,738	197,906	66,793	264,701

The sex distribution of the persons employed in mines during the years 1926 to 1929 was as shown below —

Year	Number of males employed.			Number of females employed		
	Underground	In open workings	On the surface.	Underground	In open workings	On the surface
1926	96 343	43 806	51,967	31,889	27,833	18,777
1927	86,796	50,028	58,908	31,850	27,697	19,046
1928	86,155	51,005	52,430	31,786	28,453	17,843
1929	92,856	51,235	51,954	24,089	28,738	17,889

Labour on Railways.—All railway work shops come under the administration of the Factories Act. The Indian railways employ nearly a quarter of a million workers in other occupations for which no provisions regarding control of hours of work, etc., have yet been made by legislation.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 40 hour week and a weekly rest of not less than 24 consecutive hours for all workers in British India employed in factories, in mines and in such branches of railway work as may be specified for this purpose by the competent authority. The Indian Factories Act which was amended in 1922 to give effect to the Conventions limited the hours of work in factories to 11 in any one day and to 48 in any one week. Provisions were also made for intervals of rest and a weekly holiday. Similar limitations were imposed under the Indian Mines Act of 1923 in respect of colliery staff. Both these restrictions apply to factories and mines controlled by railway administrations. The application of the Conventions to other departments of railway organisation has been found to be a problem beset with many difficulties and has been a subject of prolonged investigations. Orders were issued by the Railway Board in 1921 that the 40-hour week should be adopted for station staff not employed in connection with the working of trains. The Indian Railway Conference Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of

Directors of the lines managed by companies. Subsequently, however, it was found that these rules while they aim at applying the spirit of the Conventions do not adequately fulfil the statutory obligations imposed upon Government by the ratification of the Conventions. The whole question was therefore again exhaustively reviewed and a Bill amending the Indian Railways Act with the object of empowering the Governor-General in Council to make rules on the subject was introduced in the Legislative Assembly in the autumn session of 1929 and was referred for consideration to a Select Committee.

Working of overtime on Indian railway is more prevalent on construction than on the open line due to (1) the working season in the monsoon areas being confined to eight months in the year, (2) special measures taken to speed up all heavy work to avoid the locking up of capital, and (3) wet foundation work in bridges which necessitates continuous work. Usually overtime in such cases is paid at a rate fixed beforehand.

Seamen.—The Indian Merchant Shipping Act, 1923 provides that no seaman shall be signed on 'for service on a ship unless he enters into a contract in the manner specified with the Master of the ship. All agreements entered into between Masters and Seamen for service on foreign-going ships have to be signed in the presence of a Shipping Master. The agreement forms contain the rules and regulations provided for under the Act for maintaining discipline and for the fines which may be inflicted for the breach thereof.

CONTRACT LABOUR.

In most industrial concerns in India working connection with building, loading and unloading, carting, receiving, and despatching of goods and work involving the employment of unskilled labour over which supervision is either difficult or costly is given out on contract. In the textile mills industry work in connection with bleaching and dyeing is also generally done on contract at all centres. In the cotton mills in Ahmedabad work in the Milling and Waste Boom and the Kern Bundling and Baling Department, in the Drawing in Department and Beam Carrying is given out on contract in various mills. In most cases no supervision is exercised over the labour engaged by the contractor to whom the contract is given. Perhaps the most efficient method of control and supervision over contract labour is that which obtains on several railways.

This will be dealt with separately lower down. Exceptions to the general remarks made above are as follows:

In the coal mines in Bihar and Orissa contractors are employed by a large number of collieries to provide the labour required for cutting the coal and loading it on wagons. The contractors are paid at a fixed rate per ton for all coal loaded on wagons. In some cases, however, the rate paid per ton is increased either because coal is being extracted from difficult places in the mine or because the contractor has difficulties in maintaining his labour supply. The extent to which contractors are employed is considerable and probably more than half the coal raised in the Bihar coal fields is raised on the contract system. Definite figures are not available but the Indian Mining Association reports that 90 per cent.

of the coal raised in the mines belonging to that Association in the Jharia coal fields is raised by unskilled labour. In some cases contractors are only employed to provide the labour for

winning the coal. The contractor is generally responsible only for raising the coal while the mine supervising staff is responsible for seeing that the mines are run safely.

FORCED LABOUR.

The question of Forced Labour was an item on the Agenda of the Fourteenth Session of the International Labour Conference held at Geneva on the 10th June, 1930. At this Session one Convention and two Recommendations on this subject were adopted. The question of Forced Labour appears first to have been brought within the sphere of international consideration by the Peace Conference. The Temporary Slavery Commission of the League of Nations considered, amongst other things, two main questions, viz., (1) Systems of compulsory labour, public or private, paid or unpaid, and (2) the measures taken or contemplated to facilitate the transition from servile or compulsory labour to free wage labour or independent production, and they recommended that an International Convention on the subject was desirable and suggested (1) that forced or compulsory labour, except for essential public works and services, should be prohibited and (2) that certain precautions should be laid down to be observed by the authorities in the recruiting of labour. In pursuance of the recommendations of this Commission, the Seventh Assembly of the League of Nations in 1926 adopted a Draft Convention called the Slavery Convention which has been ratified by India. Article 5 of the Convention reads as follows:—The High Contracting Parties recognise that recourse to compulsory or forced labour may have grave consequences and undertake, each in respect of the territories placed under its sovereignty, jurisdiction, protection, suzerainty or tutelage to take all necessary measures to prevent compulsory or forced labour from developing into conditions analogous to slavery.

"It is agreed that

"(1) Subject to the transitional provisions laid down in paragraph (3) below, compulsory or forced labour may only be exacted for public purposes

"(2) In territories in which compulsory or forced labour for other than public purposes still survives, the High Contracting Parties shall endeavour progressively and as soon as possible to put an end to the practice. So long as such forced or compulsory labour exists, this labour shall invariably be of an exceptional character and shall always receive adequate remuneration, and shall not involve the removal of the labourers from their usual place of residence

"(3) In all cases the responsibility for any recourse to compulsory or forced labour shall rest with the competent central authorities of the territory concerned.

The following are some of the internationally accepted principles regarding Forced Labour—

(a) That no broad labour market exists except on essential public works and services.

(b) That a general rule of labour for public purposes should not be applied to mines in the Jharia coal fields.

(c) All forced labour is to be adequately remunerated.

The general public purposes for which forced labour is used are classified under five main heads—(1) Public works, (2) Portage, (3) Emergencies, (4) Compulsory cultivation, and (5) other purposes. The International Labour Office conducted an enquiry into the practices with regard to forced labour obtaining in the various countries, including India, prior to the drafting of the questionnaire on the subject. The extent to which forced labour is exacted in India and the legal sanction, if any, behind it are dealt with below.

Public Works.—In Bihar and Orissa in British India, compulsory work is exacted by the Government in certain aboriginal areas in connexion with the upkeep of public roads and minor public buildings in the vicinity of the village community from which the labour is levied. It is not quite clear how far this work may be regarded as being performed for general public purposes as distinct from local public purposes.

Portage.—In British India, under Bengal Regulation XI of 1806, the landholders of places through which troops, military officers, or other travellers are passing are bound, on requisition of the local civil authority, to provide carts, bearers, coolies and necessary supplies for payment at rates fixed by that authority. In the Bombay Presidency labour can be impressed under Rule 42 of the Bombay Regulation XXII of 1827 which reads as follows—

42 First—When emergent occasions require the immediate march of troops, and more extensive aid towards it (than is allowed by the preceding section) is necessary, the (District) Magistrate may resort to impressment under the following rules, being careful to define the nature of the employment for which the impressment is made, and the period it is to continue. The remuneration for services or supplies procured by impressment is to be fixed by the District Magistrate on a liberal scale. It is stated that these Regulations are now very rarely, if ever, used, as both military units and civil officers have their own means of transport. Carts for touring officers are impressed in the Districts of the Bombay Presidency. In some districts a list of carts available in each village is kept by Police Patels and the carts are taken in turn. No cart is taken beyond twenty miles and hire is paid according to a fixed scale which is never below the local market rate.

Emergencies.—In British India, labour may be impressed to avert sudden and serious dangers to irrigation works under the following Acts:—The Northern India Canal and Irrigation Act, 1872, the Bombay Irrigation Act, 1879, the Punjab Canal and Irrigation Act, 1871, and the Madras Canal and Irrigation Act, 1859.

In Bihar and Orissa compulsory labour is exacted by the Government in certain aboriginal areas. In parts of the Banthal parganas (districts) and of Singhbhum, the Government instead of imposing local taxation, require village communities to maintain each their own share of the public roads near public buildings in the immediate neighbourhood of their homes. The distribution of work is left to the village headman, the work is done at the leisure of the villagers, and the method is considered appropriate to the state of economic and political development of these areas. In the West Khandesh District, of the Bombay Presidency labour is liable to be exacted from Watandar Mahars and Bhils in pursuance of the Watan settlements where there is occasionally a clause to the effect that the body of Mahars or Bhils should supply men if necessary. Such a demand is however, reported to be seldom made.

Forced Labour for Private Purposes

LABOUR DUES FOR LANDHOLDERS.—Forced labour for private purposes is not countenanced by the Government of India. Mention must be made, however, of the labour dues which are exacted in many parts of India, under ancient custom, by land holders from tenants and agricultural labourers. In most, if not all cases the duty of providing this labour carries corresponding rights. Thus an agricultural tenant or labourer usually has the right to free grazing on the landholders' ground, to cut wood and thatching grass for the construction and repair of his house and well, and to the free occupation of the land on which his house stands. Similarly, a low-caste labourer who works in leather has the right to the skins of all cattle dying in the village.

In the Talukdari villages in the Bombay Presidency imposed labour for private purposes is typical of feudal character both in its scope and origin. The traditional village services continue to be performed by tenants in the Ratnagiri District where they work on the land of the *Khats* for nominal payment in kind. Section 35 of the Khotsi Act, however, discountenances such exactions from the tenants who are however found to be unwilling to depart from the age long custom. In the other parts of the Presidency, modern ideas are beginning to influence the tenants who are increasingly opposed to the system of forced labour exacted by the Talukdars.

It was also the custom in Sind for the revenue and other officials to exact 'chher' or free labour whenever required for public or private purposes. The Committee appointed by the Government at Bombay to deal with the subjects of 'Rasul' (levy of free supplies), 'Lapo' (share of produce) and 'Chher' (compulsory free labour) have dealt with the question in their Report, published in 1931.

The principal recommendations of the Committee were (1) that casual labour should be employed whenever obtainable, (2) that the principle of full payment strictly enforced; (3) that steps should be taken to prevent excessive demands of labour by the landlords, and (4) that regulations for the repairs be made, and that the Government should pay the full price for the labour.

were approved by the Local Government who ordered that they should be carried out in practice. No reference to this old institution of "chher" is now reported.

The Penal Code provides that any person who unlawfully compels a person to labour against the will of that person may be punished with imprisonment with or without hard labour for a period not exceeding one year or with a fine, or with both. It appears that this provision is intended to put a stop to the practice of forced labour which was, and is still to a certain extent, in vogue and is aimed at the abuses arising from forced labour which ryots were in former times compelled to render to great landholders.

The extent and the nature of the system prevalent in the Indian States are as follows:—

"According to the census report of 1931, there were 140,755 slaves in Rajputana and Central India alone, including 10,884 born domestic slaves in Bikaner and 48,100 in Jodhpur. They are known by various names such as Darogas, Humaris, Ravana Rajputs Chelas and Chelas, and are owned by princes, Hindu and Moslem alike. They are bound to be lifelong servants of their masters and are not allowed to own property except a few necessities. Their masters exercise the power of disposing of their wives and daughters and to a great extent control their marriages and divorces. If they run away to other States they are liable to be brought back and returned to their masters.

"In Jodhpur, if the Darogas fail to give service commensurate with the position and requirements of the master, the latter is legally entitled to compel them to do so. Rajputs who have Darogas born in their houses and who have brought them up are entitled to give away their daughters as part of the dowry of their own daughters. In Kotak agricultural labourers, shopkeepers, cowherds and herds of the State are not allowed to emigrate to another State unless they have arrived at a settlement with their masters. They are also prohibited from entering State service.

The systems of *Veth* and *Begar* (forced labour) prevail in almost all the Indian States and all classes of labourers and artisans are compelled to work for the princes and their officials for remuneration which in practice is nothing but their food. They are compelled to work at any time and for such time as the State wishes and are also forced to travel long distances from their homes to distant villages or to the hills and jungles, when princes and their guests go hunting or officials are on tour.

"According to the Bundi State regulations, several classes of people, such as barbers, oil-makers, hotel-keepers, butchers, peasants and Bhils (aborigines), must work for nothing or supply free of charge such material as fuel, skins for drums, and dried cow-dung. For all labour carried out for State purposes, such must be given and for all work done for public servants wages must be paid, but such labour must be done by the classes hereditarily bound to perform it, and if members of these classes refuse to do their work they must be severely punished.

Before the Commission of Enquiry appointed in the Udaipur State in 1933 to investigate the grievances of the peasants, one of the complaints was that Bolas Bhils and Balais, even if they had given up their calling, were compelled to build roads and carry the bedding of officials from one village to another without payment.

In Kathiawar those who are liable to forced labour belong to depressed classes such as Dhedis, Dubhas and the Dhodias and are often called Chakars or Golas. Those who are privileged to exact their labour are known as *Dhamamas* or *Anarias* (masters). The latter are a class of well-to-do landholders. The relation between the two classes is that of bond slaves and their masters.

In the Surat district this class of indentured labourers is called *Halis*. A man becomes a *Hali* by reason of debt contracted either by him or by his forefathers. When a man of this class contracts a debt for a marriage or funeral ceremony, he pledges the only thing he has of any value—his labour—for the rest of his life or till the debt is repaid and becomes a

Hali and his creditor a *Dhamama*. But the debt has a way of constantly increasing and never diminishing. As long as the debt remains, he also remains the slave of his *Dhamama* and after him his children inherit the debt and the status of the *Hali* thus becomes perpetuated from generation to generation. The debts range from 100 to about 800 rupees. Interest being calculated at rates varying from 9 per cent to 12 per cent. The *Khata* or account is of course kept by the *Dhamama*, and he takes care to get his *Hali*'s thumb impression on the *Khata* periodically so as to keep him in constant terror of the civil court. The landlord has his *Halis* as part and parcel of his property and uses them for field labour or domestic work according to his needs.

Until not long ago the *Halis* were treated virtually as a commodity which could be purchased or sold in liquidation of debt and even to this day such transactions though not common, are not unknown. The *Hali* or *Dubla* form of labour is a well-organised feature in the agricultural industry in the Surat district and these *Halis* and *Dublas* change hands like a commodity.

UNEMPLOYMENT

The problems connected with unemployment in India are quite different from the problems which have arisen in highly industrialised countries like England and the United States of America and Germany. In the latter countries labour is divided into two fairly distinct classes (1) industrial, and (2) agricultural. During periods of depression in industry those workers who are thrown out of employment either on account of a temporary or a partial closing down of concerns cannot fall back upon agriculture for earning their livelihood. It is necessary to repeat here, in order to understand this question clearly, that more than 70 per cent of the population of India derive their livelihood from various occupations in connection with agriculture. This does not mean that agriculture is a perennial source of employment. Considerable unemployment and distress occurs during periods when the monsoon fails. Even during those years when the monsoon is generally successful, there are several parts of the country where the rainfall is deficient and there is not enough scope for the employment of all the labour available. Both the Government of India and the various Provincial Governments have devised various schemes for famine relief and the variations in the visitations of nature with their consequent periods of prosperity and distress have now been brought more effectively under human control than ever before in the history of India. It is not necessary to go into the details of the questions connected with famine relief in this section. The point which it is intended to bring out is that, owing to the agricultural character of industrial labour in India, the problems connected with employment and unemployment are somewhat closely related to those connected with the success or the failure of the monsoon.

Speaking generally, the Indian labourer migrates to industrial centres when he finds that the yield of the land in his native place is not sufficient to maintain on the members of his family. A certain percentage all the workers

employed in industry temporarily give up their employment during the sowing transplanting and harvesting seasons. During periods of depression in trade and industry, industrial workers released from employment all back upon agriculture and thus add to the existing pressure of population on land. If the depression in trade and industry synchronises with the failure of the monsoon, the amount of unemployment becomes considerable and the resulting distress is enormous. Various States have devised schemes of Employment Exchanges for the purpose of studying the problems in connexion with the demand and supply of labour to control the movements of labour and to place it where it is required. The Government of India and the various Provincial Governments have considered the question of creating Employment Exchanges in India several times during the last ten years, but opinion is unanimous that owing to the preponderatingly agricultural character of Indian labour it is practically impossible to devise any satisfactory scheme for the formation of Employment Exchanges.

India is a State Member of the International Labour Conference and as such she is bound according to the terms of the Treaty of Peace to ratify and adopt wherever possible, any Convention or Recommendation adopted by the International Labour Conference. The consideration of industrial unemployment was thrust upon the Government of India by the Washington Convention, which was adopted by the First International Labour Conference held in Washington in 1919. Each Member ratifying this Convention was required—

(i) to communicate to the International Labour Office all information, statistical or otherwise concerning unemployment, including reports on measures taken or contemplated to combat unemployment,

(ii) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees,

including representatives of employers and workers to advise on matters concerning the operation of these agencies

(iii) where systems of insurance against unemployment have been established, to make arrangements, upon terms to be agreed upon between the members concerned, whereby workers belonging to one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter

In addition to this Convention, the First International Labour Conference also adopted a Recommendation which advocated—

(a) the abolition of employment agencies which charge fees or which carry on their business for profit

(b) the establishment of an effective system of unemployment insurance, and

(c) the execution of public works as far as practicable during periods of unemployment and in districts most affected by it

The draft convention was ratified by India but in communicating this ratification to the International Labour Organisation at Geneva the Secretary of State for India found it necessary in order to avoid subsequent misunderstanding to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominantly agricultural character of the country. The Government of India in addressing the local Governments on the question arising out of the draft Convention and Recommendation adopted by the International Labour Conference invited views on the following points—

(i) Advisability of creating Public Employment Agencies in congested areas to facilitate the migration of surplus labour to industrial areas where there is a shortage of labour

(ii) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam

(iii) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of famine and scarcity to those in search of employment

(iv) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies

(v) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit. The replies of the local Governments indicated that in most provinces the demand for labour exceeded the supply, that, even in provinces from which there was a large migration of labour no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand that the establishment of public employment agencies would serve no useful purpose and that such agencies might excite suspicion and be liable to be misunderstood by the people. With regard to the recruitment of labour for Assam the local gov-

ernments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment

Middle-class unemployment.—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted wide spread public attention. In January 1920, a Resolution was passed by the Legislative Assembly in the following terms—

This Assembly recommends to the Governor General in Council that he may be pleased to appoint a Committee with a non official majority to investigate into the problem of unemployment in general and among the educated classes in particular, and devise suitable remedies whether by a system of industrial and technical education or by a revision of the existing system of education or by offering encouragement to the starting of new industries or by opening new avenues of employment or by the establishment of employment bureaux or by all these or any other means and that the said Committee do make a report on the latter problem as early as possible

Similar Resolutions were also passed in some of the local Legislative Councils. The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle-class unemployment in India. As a result of the Resolutions passed by the local Councils Committees were appointed by some of the local Governments. The reports of most of these Committees refer almost exclusively to middle-class unemployment but the Punjab and the Bengal Committees also dealt with general unemployment. The Punjab Committee came to the conclusion that there was no unemployment worthy of mention among the uneducated classes whilst the Bengal Committee observed as follows—

‘The labourer if we may use the term has not yet been divorced completely from the land, and he frequently possesses or has an interest in a small plot of land in his native place on the cultivation of which he can fall back in times of depression. Added to this is the fact that industrial labour is still comparatively scarce in Bengal and in fact had to be imported from other provinces. The effect therefore of trade depression on the industrial labourer in Bengal is so far very small

Jute and Cotton Mill Industries.—In the jute mill industry in Bengal a large number of mills have, during the last two or three years changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported

with regard to unemployment in the Bombay cotton mill industry, out of about 140,000 workers employed, approximately 10,000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two sides of a spinning frame instead of one and where the ordinary two loom weaver is required to tend three looms. The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund. This has been dealt with in the summary given with regard to the findings of this Com-

mittee in the Section on Conciliation and Arbitration. Owing to depression in trade several cotton mills were being compelled either to close down completely or to work with partial complements. Owing to the Boycott movement, however, since October 1930 the cotton industry is again showing signs of considerable improvement and many of the mills which had closed down during the year have again started working with full complements. Not only are the mills working with full complements but many are working a night shift. In December 1930 18 mills in Bombay were working a night shift and 18 in Ahmedabad.

INDUSTRIAL SAFETY AND INSPECTION.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The total accident rate per 100 000 employees in factories rose from 520 in 1904 to 1,025 in 1927 whilst in mines the total accident rate

per 100 000 operatives also rose from 116 in 1904 to 357 in 1927.

Statistics for 1928—The numbers of accidents classified according to fatal, serious and minor in each of the British Provinces in India for the year 1928 are shown in the following table—

Province	Fatal	Serious	Minor	Total
Madras	12	258	1 069	1 339
Bombay	39	1 000	3 419	4 518
Bengal	70	1,204	2 373	3 647
United Provinces	26	176	1 407	1,611
Punjab	29	36	664	1 019
Burma	16	218	1 218	1 452
Bihar and Orissa	43	420	1 386	1 849
Central Provinces and Berar	11	34	292	337
Assam	2	40	43	85
North-West Frontier Province				
Baluchistan	1	2	19	22
Ajmer-Merwara	3	5	218	226
Delhi	2	7	50	59
Bangalore and Coorg	1	2	122	125
Total	264	3,494	12 590	16,348
Total for the year 1927	242	3,403	12 066	15 711

Factory Inspection—The administrations of the Indian Factories Act is entrusted to Factory Inspectors in each province. Where breaches of the Act are discovered the managers of factories are prosecuted and in most cases such prosecutions result in convictions. All provinces except Assam have Factory Inspectors. In the Bombay Presidency the full time factory staff consists of the Chief Inspector of Factories, three Inspectors, three Assistant Inspectors and one Woman Inspector. The Chief Inspector, two Inspectors and two

Assistant Inspectors have their headquarters in Bombay City. An Inspector and an Assistant are stationed in Ahmedabad. The Woman Inspector has headquarters in Bombay but has jurisdiction over the whole Presidency. She deals with problems mainly affecting women. The Bombay Presidency is the only province in India which has a Lady Inspector of Factories. Full-time Certifying Surgeons are stationed in Bombay and Ahmedabad. They have been appointed as Divisional Inspectors with powers under the Health and Sanitary sections

of the Factories Act. They have also been granted powers under the provisions of the Bombay Maternity Benefit Act. The Director and Assistant Directors of Public Health have also been appointed as Divisional Inspectors under the Health and Sanitary sections of the Act. Their reports are sent to the Chief Inspector who passes orders on the same. Local Magistrates in the districts have ex-officio powers under the Employment sections of the Act.

Reporting of accidents.—Section 34 of the Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents, namely fatal, serious, & accidents which prevent a person returning to work for 21 days or more and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the Police Station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident and to take steps for the prosecution of the person concerned. If it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act, the Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Local Government, even though no injury may have resulted therefrom to any person. So far notifications have been issued under this section only in Bombay, Bengal and Burma.

Accident Prevention.—The chief influences in the prevention of accidents are (a) the powers of inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents; (b) the voluntary interest of managers in safety measures and safety precautions; and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover *Safety-First* measures such as compelling certain classes of workers to wear tightly fitting clothes to prohibit children from entering into certain parts of factories etc. but no serious attempt has been made in the shape of a *Safety-First* campaign except in the case of a few solitary instances. In some provinces the first three resolutions adopted by the eleventh Session of the International Labour Conference have been communicated to all industrial concerns. In the Bombay Presidency the Millowners' Mutual Insurance Association have recognised the value of safety powers as an aid in the reduction of accidents and have undertaken the preparation of some posters for the textile industry. The posters which are under preparation will illustrate the danger of carding machines at the front plate either during or after the shifting process, dangers at the roadside of the *Mokere-in*, dangers of wearing unsuitable clothing and the danger from careless sweeping under ring frames.

The railways are of course pioneers in the introduction and the continuance of active propaganda in *Safety-First* work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. In order to present a complete picture of this work on railways the work done for railway workshops will be dealt with under Railways. Perhaps the best known instance where first class *Safety-First* work is being carried on in India is that done by the Tata Iron and Steel Company at Jamshedpur. The Company has since 1920 subscribed to the British Industrial Safety First Association and has installed notice boards all over the plant exhibiting the posters supplied by that Association. The literature received from the Association has also been circulated broadcast throughout the works.

First-Aid and Medical Relief.—Some of the Local Governments have framed rules requiring the provision under the charge of responsible persons and in readily accessible positions of first-aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing 500 and more operatives. Most of the factories are situated within easy reach of Government hospitals or hospitals maintained by Local Authorities but many of the larger and enlightened employers are already maintaining their own medical staff and equipment which are easily available in cases of accidents. In the Tata Iron and Steel Works at Jamshedpur boxes with first-aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons.

Mines.—The Indian Mines Act of 1923 empowers the Governor General in Council to frame regulations for the safety of persons employed in mines (Section 23 clause (b)) to (p) Local Governments are also empowered to frame rules under the Act to ensure the proper fencing of a mine for the protection of the public. In addition the Chief Inspector of Mines may call upon the owner, agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the Act regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved by the Local Government have effect as enacted under the Act. Further Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by the Act, regulations, rules and the bye-laws. The Governor-General in Council has framed two sets of regulations, namely the Indian Coal Mines Regulations, 1926, which apply only to coal mines and the Indian Metaliferous Mines Regulations, 1926, which apply to all other mines. These regulations provide for the proper maintenance of shafts and outlets roads and working places, hoisting arrangements, fencing and gates, for the restrictions which have to be observed in raising or lowering persons or materials for the precautions to be taken in the use of explosives, and for adequate ventilation and lighting.

Railways—The Railway Department conducts an intensive *Safety First* propaganda every year which embraces the following among other activities—

- (1) Safety posters and safeguards are put up on prominent points both in English and in the vernacular. Some of these, e.g., on the Bombay Baroda and Central India Railway, are prepared from actual photographs of safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.
- (2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1926-27 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways.

- (3) Photographs and special articles are published in the Railway magazines for the instruction of the staff.
- (4) Inspecting subordinates are instructed to take the opportunity, while visiting stations, of addressing the staff on *Safety First*.
- (5) Coloured pictures showing the right and wrong way of doing a job are posted at several places for the benefit of the illiterate staff.
- (6) A *Safety First* film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distributed to railways. The film is displayed weekly by the travelling cinemas of the railways.
- (7) A *Safety First* pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

WORKMEN'S COMPENSATION

The Workmen's Compensation Act of 1923 came into force on July 1st, 1924. This measure when originally introduced in the Legislative Assembly, contained clauses modifying the ordinary law in respect of employer's liability and making it easier for injured workmen to sue their employers for damages in the Civil Courts. These clauses applied only to workmen who come under the workmen's compensation provisions so that although they omitted the limit to damages which governs their counterpart in England they were not likely to be much used. The clauses in question were deleted from the measure by the Legislative Assembly. The Act as passed by the Legislature covers ten classes of workmen. Some of these, such as members of fire brigade, telegraph and telephone linemen, sewerage workers and tramway men are small and as the definition of seamen is limited to those employed on certain inland vessels only a very small proportion of Indian seamen come under the Act. The five important classes covered are the workmen in factories, mines, docks and on railways practically all of whom are included and those engaged in certain types of building work notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs. 300 a month are excluded, except on the railways. Power is taken to include other hazardous occupations by notification from time to time. All occupations involving blasting operations were thus proposed to be declared by the Governor General in Council as hazardous occupations. Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease, it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally

difficult to get compensation for disease as they will have to prove that the disease arises solely and directly from the employment. The diseases scheduled at present are anthrax, lead poisoning and phosphorus poisoning. Whether compensation can be claimed for diseases other than those scheduled is doubtful, but the list is made capable of extension. Mercury poisoning was thus added to Schedule III by notification, dated 28th September 1926.

In order to bring the Indian law into conformity with the provisions of the Draft Convention concerning Workmen's Compensation for occupational diseases adopted at the Seventh International Labour Conference held at Geneva in 1925 which has been ratified by India, necessary changes were made in sub-section (2) of section 3 and in the list of occupational diseases given in Schedule III of the Act. Certain occupations in connection with operations for winning natural petroleum or natural gas and in connection with the loading, unloading and fuelling of a ship in any harbour, roadstead or navigable water were also brought within the purview of the Act by notification issued by the Governor General in Council in exercise of the powers conferred by sub-section (3) of section 2 of the Act.

The Amending Act of 1928—A number of amendments have suggested themselves or have been proposed by Commissioners for Workmen's Compensation and Local Governments. Some of the proposals involved the modification of the principles underlying the Act of 1923 or of its more important features. So far as these are concerned, the Government of India consider it advisable to consult Local Governments and the public generally before forming conclusions. With a view to revise the Act so as to amend those Sections or parts of Sections which were admittedly defective and to introduce changes which were likely to raise no important controversial questions and which would be generally recognised as improvements, the Government of India introduced into the Legislative Assembly on 21st September 1928, a Bill further to amend the Work

men's Compensation Act, 1923. The main features of this Amending Act are (1) that the discriminating restrictions placed on workmen employed in the construction, repair or demolition of a building or bridge, with regard to their ineligibility for compensation except in the case of death or permanent total disablement has been removed (2) that all payments to dependants of the deceased workmen (except advances to the extent of Rs. 50 for funeral expenses of the deceased workman and to the extent of a hundred rupees on account of compensation to any dependent) and any lump sums payable to minors should be paid through the Commissioner (3) deposits of trivial amounts i.e. less than Rs. 10 has been done away with (4) provision is made for the protection of lump sums payable to a woman or a person under legal disability by empowering the Commissioner to invest, apply or otherwise deal with them for the benefit of the woman or of such person during his disability (5) powers are vested in the Commissioner to recover any amount obtained by any person by fraud, impersonation or other improper means and (6) the benefits of the Act are extended to (a) any person employed for the purpose of loading, unloading, fuelling, constructing, repairing, demolishing, cleaning or painting any ship of which he is not the master or a member of the crew or (b) employed on a railway as defined in Sections 3 (4) and 149 (1) of the Indian Railways Act 1890, by a person fulfilling a contract with a railway administration or (c) employed as an inspector, mail guard, sorter or van peon in the Railway Mail Service, or (d) employed in connection with operations for winning natural petroleum or natural gas as a rig builder, driller, driller's helper, oil well puller or bailing or cleaning oil wells or putting in and taking out casings or drill pipes in oil

wells or (e) employed in any occupation involving blasting operations.

As a result of the experience gained of the working of the Act the Government of India have thought it desirable to re-examine the principles underlying the Act as it stands to-day and its more important features. The enactment of 1923 was admittedly an experimental measure and many of its features owe their origin more to a desire to minimise the difficulties attendant on the introduction of an entirely new measure of this kind than to any belief in their permanent value.

Statistics.—The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the Act came into force. These statistics relate to the more important classes of workers i.e. workers in factories, mines and docks and on railways and tramways. The total amount of compensation paid to these classes of workers was about 6½ lakhs of rupees in 1925 8½ lakhs in 1926 and 11 lakhs each in 1927 and in 1928. The total amount of compensation paid in respect of accidents in the Tata Iron and Steel Works at Jamshedpur where over 25,000 persons were employed, was as follows—

	Rs.
1926	58,206
1927	52,418
1928	78,498

Occupational diseases have figured for the first time in 1927 in connection with the working of the Act in India. It is reported that a compositor in a printing press in Bengal owned by the Local Government was found to have fallen a victim to lead poisoning for which he was paid Rs. 2,730 as compensation. The following table shows the number of cases classified by nature of injuries and the amounts of compensation paid in each year since 1924—

Year	Number of Cases			Amount of Compensation paid for		
	Fatal	Non Fatal	Total	Fatal Cases	Non Fatal Cases	All Cases
				Rs.	Rs.	Rs.
1924 *						
Adults	249	3,898	4,147	82,085	66,248	1,48,333
Minors	2	19	21	375	1,518	1,891
1925—						
Adults	588	10,761	11,334	3,45,995	2,95,535	6,41,530
Minors	7	30	37	200	2,391	2,591
1926—						
Adults	631	18,867	14,048	4,26,935	3,94,385	8,20,220
Minors	8	45	48	480	695	1,155
1927—						
Adults	777	14,397	15,174	5,81,400	5,27,984	11,09,384
Minors	6	36	42	840	1,030	1,870
1928—						
Adults	819	15,898	16,717	5,21,710	5,69,741	10,91,251
Minors	9	42	51	2,494	1,985	4,479

* The figures for 1924 relate to only the six months from 1st July to 31st December

The following tables set out the proportion of contested cases out of the total number of applications received by the Commissioners in each year —

Year	No. of Applications disposed of	Number of contested Cases.	Percentage of contested cases to total disposed of
1924	92	14	15.2
1925	539	100	18.6
1926	835	198	23.7
1927	1 223	281	22.9
1928	1,306	309	23.7

The details of agreements (i) disposed of (ii) registered as filed and (iii) rejected on account of inadequacy are given below for each year —

Year	Number of Agreements.			
	Disposed of	Registered as filed	Registered after modification.	Not registered on account of inadequacy etc.
1924	41	33	1	7
1925	399	390	3	6
1926	591	583	5	3
1927	701	682	12	7
1928	837	855	25	7

Compensation on Railways.—The total amount of compensation paid under the Act by the principal railways in India, since 1st July 1924 was over Rs. 12,00,000, the average per year being nearly 3,00,000. This is over and above the compensation paid under departmental rules.

Effect on Industry.—A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines the increase in cost has been estimated to be not more than about four per cent of coal (*vide* para 29 of the Report of the Indian Coal Committee, 1925). However the owners of many of the small coal mines have been compelled to close down their mines due mainly to the severe depression with which the industry has been

facied. In the Punjab the proprietors of the coal mines in the Jhelum District are reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them have had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Caisse Bureau in Calcutta, Bombay and Madras. In these three provinces insurance is widely resorted to by the employers but in the other Provinces accident insurance does not appear to have made much progress.

INDUSTRIAL HOUSING.

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they employ. The importance and the urgency for providing decent housing cannot be sufficiently emphasised.

The conditions of industrial housing in India are, in many cases, appalling and the majority of buildings, tenements or huts in which industrial labourers are housed are insanitary and more or less uninhabitable from Western points of view. Provincial Governments, Municipalities,

Improvement Trusts and the larger employers have done a great deal to mitigate the evils resulting from an insufficiency of decent sanitary housing for labour, but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees of inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing. The Industrial

Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay other measures should be adopted such as the refusal of permission with a few exceptions to fresh industrial concerns to be established, the setting up of a special area for industrial development, the removal of the existing railway workshops from the city supply of housing, accommodation to the employees by railways, Government departments and public bodies improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of other commissions and committees with regard to this question follow similar lines.

Bombay Presidency—The first attempt to improve housing conditions in Bombay City was made after the plague of 1896 when the heavy mortality and the great exodus that followed paralysed the trade and industry of Bombay. The Bombay Improvement Trust was established in 1898 'for the work of making new streets opening out crowded localities reclaiming lands from the sea to provide room for the expansion of the city and constructing sanitary dwellings for the poor and the police. Owing to its limited powers and the various difficulties which it encountered the Trust had to content itself for the first few years of its existence with slum patching, the development of a few building sites, the construction of a few chawls and the development of main roads. In more recent years, however, the Trust has been able to do considerable good work in the direction of industrial housing and has built over 1,800 tenements for housing its own labour and 99 chawls containing 8,606 tenements in all for housing labour in general. The Bombay Port Trust which engages on an average about 8,800 manual workers in all its departments has provided accommodation for a little over 8,000 of its workers. The Bombay Municipality has provided a large number of chawls for its employees as will be evidenced by the fact that 5,539 out of 7,537 scavengers employed are provided with quarters. Varying proportions of the numbers of employees in the other departments of the Municipality are also provided with adequate housing. According to the information collected by the Bombay Labour Office in 1925 28 out of the 76 textile mills in Bombay City which furnished information for the enquiry had provided housing for their operatives. 7 out of these mills provided residential accommodation only for employees in the Watch and Ward Department and the rooms provided were given free of rent. In the 22 mills which provide partial housing for all classes of operatives, the number of workers who lived in the tenements provided amounted to 12,149 out of 84,790 employed. The G.I.P. Railway owns 20 chawls containing 841 one-room tenements and the B & C I Railway owns 366 one-room tenements for housing their employees.

No action was taken by the Local Government in Bombay City for housing general industrial labour till after the end of the war. A broad and comprehensive policy was drawn up just after the end of the war by the Government of Bombay under the personal inspiration of Lord Lloyd, then Governor of Bombay, for

dealing with the problem. A Development Directorate was formed in 1920 to co-ordinate the various housing activities of Government, the Municipality, the Improvement Trust and the larger labour employing organisations. The original intention of the Directorate was to construct 625 chawls located in 3 industrial centres and to comprise of 50,000 tenements for working classes, within a period of 9 years from 1921 to 1929. The original estimated cost was 54 crores of rupees and a town duty of a rupee per bale of cotton on all cotton entering Bombay was imposed under the City of Bombay Municipal and Improvement Act of 1920. The scheme was launched at a time when the industrial prosperity of the country was at its zenith and labour conditions in the City were abnormal. By the end of 1927 207 chawls with 16,524 tenements were constructed but only 128 chawls with 8,234 rooms were occupied. These chawls did not attract industrial labour in Bombay to live in them, the reasons attributed to the failure being the distance of the chawls from the mills, the absence of travelling facilities and other amenities of city life. The average economic rent per tenement worked out at Rs. 16 per month but the actual rents charged were fixed on an average at barely 50 per cent of the economic rent and accommodation can now be had in the chawls at Worli at Rs. 6 per room on all floors. The rents in the Nalgaum and Sewri chawls are Rs. 7 per room on all floors and for those in the chawls at DeLisle Road Rs. 8 per room per month on all floors. One rupee extra is charged for certain corner rooms. The rents charged prior to 1st April 1929 were, however, higher for all centres. The figure of the number of rooms occupied on the 31st December 1927, namely 8,234 was the highest ever recorded. Frequent strikes in the cotton textile mills and general industrial unrest in Bombay City have been largely responsible for the non-occupation of the rooms in the chawls of the Development Department during the last two years and the figure for the number of tenements occupied on the 31st March 1929 was only 6,606 or a little over 40 per cent of the number of tenements available.

Ahmedabad City—Probably in no other industrial centre in India is the condition of the housing of the working classes so bad as it is in Ahmedabad. The Textile Labour Union at Ahmedabad has recently published a pamphlet entitled 'A plea for Municipal Housing for the Working Classes in the City of Ahmedabad' for submission to the Ahmedabad Municipality. In this pamphlet the Union deals with 23,708 tenements observed and studied by it. The Union reports that there is absolutely no provision of water in the case of 5,609 tenements 3,117 tenements have a supply of some sort of wells. Even those which are supposed to possess the advantage of Municipal water have a hopelessly inadequate arrangement in this respect—a tap or two in a compound for a group of 200 or more families. Bathing and washing accommodation has not been thought of except in one or two chawls erected by mills. 5,800 tenements have no latrine accommodation. In most of the remaining tenements the Union reports that the arrangements are miserable in quality and grossly insufficient.

in quantity and that urinals are conspicuous by their absence. Only a few tenements are provided with any sort of drainage. No other drainage arrangement exists.

The evils of bad housing in Ahmedabad were considerably aggravated as a result of the flood of July 1927 in Gujarat which destroyed over seven thousand houses in the City of Ahmedabad. The bulk of these houses belonged to the working classes. The Union in the pamphlet referred to reports that the situation which had arisen in consequence of the flood was grave beyond words. Of the thousands who had been unhoused many came to share with their relatives and friends the accommodation that was already heavily overcrowded. Hundreds were altogether without shelter. The relief operations that were then carried out included the construction of huts intended to provide temporary accommodation to a number of those who could make no arrangement of their own. The Relief Committee set up by the leading citizens of Ahmedabad for reconstruction work recommended that the Municipality should take as early step as possible to construct 5,000 sanitary tenements by raising a loan for the purpose.

In the opinion of the Labour Union the solution of the question of housing constitutes one of the obligatory duties of the Municipality, and a growing appreciation of this aspect of the housing question on the part of the authorities has led to the incorporation in the City Municipalities Act (1925) under section 71 of a provision permitting City Municipalities to undertake provision of sanitary dwellings for the poorer classes. Owing mainly to the efforts of Mr. Gursallal Nanda, Secretary of the Ahmedabad Labour Union, the Ahmedabad Municipality has recently decided to construct model dwellings for the working classes.

Bengal Presidency.—Housing is generally provided in Bengal by employers but the extent and quality of the housing depend on the cheapness and availability of land. In the more congested areas in Calcutta, Howrah and the nearest neighbourhood housing facilities are not provided on so big or so good a scale as in other areas. Most jute mills provide for their workers rooms constructed in the neighbourhood of the mills at rents varying from annas 3 to Re 1 per room per month. The sizes of the rooms vary from 8'x8 to 10'x10' and in some cases to 12'x10'. In nearly all cases the rooms are constructed back to back and in most cases floors and tiled roofs have been provided with narrow verandahs generally 4' wide used for cooking purposes. Very often the rooms are dark and in none of them sun light can penetrate through. Ventilation is unsatisfactory owing to the method of construction and the only openings in the rooms are the doors. If windows are provided they are kept shut. No chimneys or openings are provided for the escape of smoke in the majority of the houses. Recent enquiries made into the condition of housing in Bengal show that drainage, water supply and conservancy arrangements in *hukkas* are abominable. Government and other public agencies do not provide housing as in Bombay, for industrial purposes but some Government and public concerns do provide quarters for their own employees.

Madras Presidency.—As a result of the exertions of the Labour Department of the Government of Madras and the Co-operative Building Societies and a number of local authorities some houses have been built for poor workmen in Madras City. Out of 14,080 registered factories 211 factories are reported to have provided housing for a small number of their employees. Almost all plantation estates in the Nilgiris, Malabar and Coimbatore provide lines for the cool labour employed.

United Provinces.—Out of 330 regulated factories 83 make some provision for the housing of workmen and their families. Altogether about 5,400 single room and 1,048 double room tenements are provided by the employers. The McRobertson, Allamganj and the Juhl settlements of the British India Corporation at Cawnpore are about the only important examples of housing provided by employers for their workmen in that city. A scheme has however been launched by some of the owners of factories in Cawnpore for providing housing for some twenty thousand workmen and their families but it is still under discussion. Except as employers the Government of the United Provinces has done nothing in connection with industrial housing. The Improvement Trust of Cawnpore has put up some temporary housing and the Improvement Trust of Lucknow has put up a model bazaar in the area set apart as an industrial area. In the *basics* or *hukkas* where housing is provided by private landlords the type of tenement available is usually a small mud hut with a room at the back and a room or a verandah in front. The size and height vary. The usual size is 10'x8'. The normal height is 6 to 8'. The only outlet for ventilation is the small main door. Even such tenements are reported to be shared by 2, 3 or even 4 families and as many as 10 persons may be found as inmates.

Central Provinces.—Housing is provided for about 7,500 workers by some of the larger factories and mills in the Central Provinces. Nineteen per cent. of textile labour and 7.5 per cent. of the labour employed in minor industries is housed. The Pulgaon Cotton Mill maintains a settlement covering an area of 15 acres on which the millhands are allowed to build their own houses in payment of a nominal ground rent of annas 4 per annum per 100 sq. ft. Probably the most magnificent scheme of industrial housing conceived in India is that launched by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. These mills have leased a plot of 300 acres at Indora, a suburb of Nagpur, two miles from the mills. The scheme is based on a desire to establish a model village. The idea is to build houses of the bungalow type standing on their own ground in plots measuring 36'x63' with the limitation that building will not be allowed on more than one-third of the space provided. The houses are let to the workers by the hire purchase system and it is expected that many of the workers will ultimately own them.

Bihar and Orissa.—All the collieries in the Jharla coal field are amply and efficiently equipped with approved types of houses. Their design, construction, ventilation and general amenities are governed by the Jharla Mines

Board of Health Workers recruited from villages within five miles from the mine frequently prefer to live in their own villages and walk backwards and forwards to their work. In five collieries employing about ten thousand workers 4,775 houses are provided, five of the worst equipped mines employing 424 workers provide 156 houses and five normally equipped mines employing 3,084 workers provide 1,162 houses. In many cases more than one employee is accommodated in one *dhows* or house. Very frequently a man and his wife and his family all of whom may be recorded as separate labourers in the figures of the mining population occupy one house. Every house must be licensed. Licenses are not given unless the standards are complied with. If labourers are found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known.

The Tata Iron and Steel Works at Jamshedpur have built 4,521 residential buildings. Of these 301 are rented at over Rs 20 per month. Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing.

Assam.—Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and lives in its own houses. In the mines and oil fields free quarters are provided for the labour force employed. Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces indiscriminately into barracks or lines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the coal and oil fields are reported as being quite satisfactory. In Assam the tea estates are regularly inspected by District and Sub Divisional officers. Although the legal powers of interference have been curtailed by the abolition of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour still in practice the inspecting officers do invariably report on the condition of the lines. They call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces.—No special remarks are necessary in connection with the question of industrial housing in other provinces. Gene-

rally speaking no industrial slums as such or any big urban inflammation due to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of labour is not to be differentiated from the ordinary poor citizen. Except in those cases where Government action has been definitely indicated the governments of the various other provinces in India have done nothing for the improvement of industrial housing.

Railways.—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the principal railways since the commencement of operations amounts to Rs 23.41 crores while the expenditure incurred during the last four years exceeds four and a half crores. The programme for the next two years contemplates a further expenditure of Rs 1.87 crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Endeavours are, however, continuously made to construct new houses in accordance with an annually pre-arranged programme as funds permit.

Acquisition of Land for Workers' Homes.—Except the Railways, which can obtain land under the Land Acquisition Act for railway purposes which include building quarters for necessary maintenance of the staff no other industry in India is covered by that Act. One considerable difficulty has been experienced by collieries in the Bihar coal fields for acquiring land for purposes of housing schemes. In 1920 the Coal Fields Committee suggested that every facility should be offered to a Colliery Company or proprietor to acquire land under the Land Acquisition Act for the housing of labour. In considering the amendment of the Land Acquisition Act in 1923 the Government of Bihar and Orissa suggested that some amendment might be made in order to give facilities for the acquisition of land for colliery housing purposes. The Government of India, however, did not include any such amendment in their amending Act. The matter has again been before the Local Government in connection with the revision of Sections 49 and 50 of the Chota Nagpur Tenancy Act and a Bill was introduced and passed in the winter session of the Local Legislative Council in 1920. Slight alterations were found necessary in the Bill to improve its working and these changes have recently been passed by the Legislative Council.

HEALTH

No serious attempt has so far been made to keep any satisfactory statistics regarding health conditions of industrial workers e.g. morbidity rates among the workers their average weight, height, etc., and in the absence of any statistical information it is not possible to generalise about these matters. Health conditions in the important industrial centres in India cannot however be said to be very satisfactory. This is due to many causes such as poor diet, overcrowded and insanitary dwellings, want of open air and exercise, etc.

But the main cause of ill health particularly among the workers in Bombay and Bengal, appears to be the prevalence of malaria in the localities in which they live. Major Corvill, the Special Officer appointed by the Government of Bombay to enquire into malarial conditions in Bombay City who submitted his report in 1923, says: "Malaria is still present in certain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Ward and Parel."

sections. In the northernmost portion of Worli section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worli and Parel. The correlation between the intensity of malaria and the proximity of mills was most striking, especially in certain cases where a single isolated mill happened to be present, e.g., the Victoria Mill in Chowpatty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area.

In the mines in the Madras Presidency malaria prevails in the Cuddapah district and at every change of season there is a prevalence of widespread fever. Malaria also prevails in the Thummaragudi mines throughout the

year and the cold winds during the rainy season from Sandur Mills affect the health of the labourers in the mines of Tonsaigudi. Typhus also prevails among industrial workers in the United Provinces and Bihar and Orissa, and *Kala Aiz* is common among workers in certain tracts like Bihar and Orissa.

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the important industrial centres. The figures, however, relate to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality etc. among industrial workers. Besides, in certain cities like Bombay it is customary for married working class women to leave the city for their confinement and register births in the mofussil.

A table showing (a) Birth-rate and (b) Death rate per thousand of population and (c) Infant mortality for 1,000 registered births for certain important industrial centres

Centre	Period	Birth rate per 1 000 of population	Death-rate per 1 000 of population	Infant mortality per 1 000 registered births
Bombay	1928	20 56	23 59	314 40

(a) Average for 1923 to 1928

The relation between overcrowding and infant mortality is brought out in the following table extracted from the annual report of the Municipal Commissioner for Bombay City —

Infant Mortality by the Number of Rooms occupied in 1929

Number of rooms	Births.		Details in Infants.		Infant mortality per 1,000 births registered	
	Number	Percentage	Number	Percentage	1929	1928
1 Room and under	11 561	47 7	5,625	77 9	497	443
2 Rooms	1,285	5 8	473	6 5	368	365
3 Rooms	470	1 9	140	1 9	237	223
4 or more rooms	270	1 1	50	0 7	185	176
Hospitals	10,624	43 9	911	12 6	85	72
Homeless and not recorded	10	0 1	26	0 4		
Total	24,220	100 0	7,225	100 0	298	311

Working conditions.—In the Bombay Presidency the working conditions in the factories are usually considerably in advance of the conditions in the homes of the workers. The Factories Department has recently effected an

appreciable improvement in the development of ventilation in factories. The working conditions in the average Cotton Mill in the U. P. are reported to be not very satisfactory and those in the Central Provinces and Berar have

plenty of scope for improvement especially in ventilation maintenance of suitable temperature, suitable flooring proper spacing of machinery and provision of places for meals. Considerable improvements are required in the seasonal factories for alleviating the dust nuisance and for proper lighting. In the Jute mills in Bengal, especially in the spinning and carding section there are no adequate arrangements for taking off the dust and the workers get a particular kind of rash all over their bodies in the beginning of their employment. Women are mostly employed in this Department and they bring their infants and children who live in that dust-laden and hot atmosphere during working hours. Working conditions are, however, generally satisfactory in jute mills and other large industrial concerns.

A question closely connected with the health of the workers is that relating to ventilation and humidification in cotton mills. For the spinning and weaving of cotton a humid atmosphere is required. Artificial humidification is necessary in the hot season and when this is effected by the letting in of steam with the temperature of the factory is high it produces very trying conditions of work. The Government of India instituted a special enquiry into this question in 1921. Mr. T. Maloney (now Secretary to the Bombay Millowners Association) who was appointed special adviser for the purpose, presented to the Government of India a report entitled "Humidification in Cotton Mills" in 1923. The replies from local Governments received by the Government of India showed complete unanimity in regard to the suggestion in the report to the effect that the use of steam should be prohibited when the temperature in a Department of a factory exceeded 85 degrees F. In 1925 the Government of India suggested that a rule should be framed by the local Governments under the Factory Act prohibiting the use of live steam at temperatures beyond 85 degrees F. Such a rule has been issued in all the provinces concerned except Delhi, where it is expected to be issued very shortly, and Bombay. The Government of Bombay is in favour of such a rule but it considers that it would be wise to see the provisions of the Factory Act. However, the Bombay Mill owners themselves are discounting the practice of using steam for the purpose of humidification when the temperature is above 85 degrees F. The problem affects the Bombay Presidency and notable progress has already been made in this direction in that Presidency. Thus Ahmedabad has generally recognised the need of efficient ventilation and cooling arrangements to neutralise the trying climatic conditions of that centre and the mills in Bholapur have installed several special ventilatory, cooling and humidifying plants that have considerably improved the working conditions in those mills.

Extent of Medical Facilities provided.—The result of the enquiry into Welfare work conducted by the Labour Office in 1926 show that the provision of facilities for medical attendance and the supply of medicines is fairly general in all the larger labour employing organisations in the Bombay Presidency. Thus 66 out of 76 mills which supplied information in Bombay city reported that they maintained dispensaries for the supply of medicines, 4 mills,

provided only medical attendance and 3 mills supplied ordinary drugs. Out of 58 working mills in Ahmedabad, 41 mills provide both for medical attendance and supply of medicines and four mills maintain hospitals in addition to dispensaries. All the five mills in Bhilapur provide both medical attendance and medicines. One mill maintains a hospital. In most cases the dispensaries are attended by qualified medical practitioners. The mills make no or only a nominal charge for the supply of medicines. The Bombay Port Trust maintains several dispensaries, with qualified medical men in attendance for each department. The Karachi Port Trust provides a free dispensary with a medical officer at Manora. The Bombay Municipality maintains 2 special small dispensaries for its employees at Love Grove and Kuria in addition to the several Municipal dispensaries in the City. The Bombay Improvement Trust provides 4 dispensaries and 2 hospitals for its employees. Among Government Departments in Bombay the Royal Indian Marine Dockyard maintains a dispensary under a permanent Medical Officer. The Yeravda Prison Hospital gives free medical aid to the employees of the Yeravda Prison Press. The Security Printing Press at Nasik has a dispensary with a Sub-Assistant Surgeon. The Social Service League conducts a charitable dispensary at Parel for the benefit of women and children of the poor, middle and working classes. The Textile Labour Union in Ahmedabad is the only association of employees which provides medical facilities for its members. There are also Government, Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labouring classes. In the United Provinces, many of the larger employers maintain dispensaries but no hospitals. The Bhopal Fund, a private organisation aided by grants from Government and local bodies, maintains female hospitals at the most important towns. The Lady Chelmsford Maternity and Child Welfare League maintains a number of centres for child welfare and the treatment of maternity cases. Many of the employers in the Central Provinces and Berar have provided well-equipped dispensaries and medical facilities are within easy reach of the workers in almost all the factories and every important mining area in the Province. Some of the larger concerns in Bihar and Orissa and in the Punjab also provide medical facilities for their employees. In Madras only a few large factories provide dispensaries. Medical facilities in the plantations are fairly good. All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates. In all the tea gardens in Assam and in Bengal medical attendance and medicines are provided for, for all classes of employees. The medical arrangements in a large number of estates are supervised by European medical officers. Well-equipped hospitals are also provided for the labour force in the mines and oil-fields in Assam. Part-time medical attendance and medicines are provided by the employers in the Assam Mines Board Area. Medical facilities are also provided in the mines in Madras. In the Jharia Mining Settlement eight hospitals are maintained by employers, the number of beds varying from 6 to 12 in each ward.

Sickness Insurance.

The Government of India considered the possibility of introducing a scheme of sickness insurance in India in connection with the Draft Conventions and Recommendations adopted by the Tenth International Labour Conference in 1927 and came to the conclusion that owing to the migratory character of industrial labour the want of qualified medical practitioners in sufficient numbers, the existence of indigenous systems of medicine and the opposition of the worker to any system involving compulsory deductions from pay, it would not be practicable to introduce a comprehensive scheme of sickness insurance on the lines of the Conventions. The Government of India, however, invited the views of Local Governments in this matter. But it was pointed out that the Indian worker owing to his illiteracy would not appreciate the advantages of any such schemes and that he would object to the payment of any contribution particularly because he gets medical treatment free of charge in most cases. The main difficulty in the way of the introduction of any scheme of sickness insurance was stringency of finance. The recommendations of the Royal Commission on Labour on this question are however, being awaited with interest.

Maternity Benefits

The first International Labour Conference at Washington in 1919 adopted a draft Convention concerning the employment of women before and after child birth. The Conference also adopted a resolution inviting the Government of India to make a study of the question of the employment of women before and after confinement and of maternity benefits. In pursuance of certain suggestions put forward in the Legislative Assembly, the Government of India made enquiries in 1924 regarding the extent to which maternity benefit schemes were in force in India. The results were published in 1925 in Bulletin No. 82 of Indian Industries and Labour. Since that date maternity benefit schemes have been introduced by certain employers, an important scheme being started at Jamshedpur from January 1929 by the Tata Iron and Steel Company.

In September 1924, Mr. N. M. Joshi made the first attempt in the Legislative Assembly to introduce a Bill to make provision for the payment of maternity benefits in certain industries. Under this Bill, the Local Governments were to be asked to establish a Maternity Benefit Fund and to make payments out of this Fund. The Bill after circulating, was thrown out by the Assembly in August 1925. But the clue was taken up by some Provincial Legislatures and in August 1926 the Bihar and Orissa Legislative Council passed a resolution recommending to Government to take early steps

to protect female labour employed in the coalfields and all industrial plants of the Province and to prohibit their employment during the advanced state of pregnancy and three weeks after childbirth.

A Maternity Benefits Bill was introduced in 1929 in the Central Provinces Council by Mr. R. W. Fulay a non-official member of the Council, and was referred to a Select Committee in August 1929. Maternity Benefits are being given at present at the Empress Mills at Nagpur and at four other factories in the Central Provinces. All these schemes are similar, leave on absence on full wages for a period varying from one to two months being given to expectant mothers who are required to obtain from the mill doctor an opinion regarding the probable date of confinement.

The only Province in India that has passed a Maternity Benefit Act is Bombay. The Act came into force on 1st July 1929. According to this Act, the payment of maternity benefits is an obligation which is imposed directly on the employer. The first annual Report on the administration of this Act shows there were 315 claims paid for 100 women employed and the total amount of maternity benefit paid under the act was Rs. 34,683 as 1. The Bombay Municipality has started since February 1928 a maternity benefit scheme by which benefit is given to halalkhore and scavenging women in the form of leave with full pay not exceeding 42 consecutive days including the date of confinement as certified by the Executive Health Officer if the birth takes place in Bombay and by a Police Patel or by hospital authorities if it takes place out of Bombay.

In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During the period of advanced pregnancy and after childbirth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at childbirth is often granted in addition. The bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company the next largest employers of labour in Assam, grants six months' leave on half pay provided the women have been examined by the medical officers and attend hospital once a week. The Assam Oil Company grants leave on half pay for three months. On some estates in Cochin before District female codices are fed free for a month before and a month after confinement. On other estates maternity benefit ranging from Rs. 2 to Rs. 5 is paid and in some other estates free feeding of the women for two weeks before and three weeks after confinement is arranged.

WELFARE WORK.

(Excluding Health and Housing)

The importance of Welfare Work undertaken by employers to ameliorate conditions of work and leisure of their workers especially when they are not actually employed, and of the development of facilities for the utilisation of spare time, does not require too much emphasis. Facilities for sport and recreation are of great benefit to

the workers and provide a means of keeping them healthily employed during their leisure hours. Benefits derived from the provision of cheap grain shops, co-operative societies and stores, technical schools, etc., amount to a real increase in wages and are of greater advantage than actual increases in cash rates which might

be mispent. The modern system of large-scale production makes it impossible for the employer to pay individual attention to the numerous employees who are working in his factory and the absence of personal touch between the employer and the worker makes the provision of facilities for Welfare Work all the more necessary for the existence of a contented labour force. This aspect of the labour problem in India has, however, received little attention from employers as a whole and such efforts as have been made in the direction of ameliorating workers' conditions take the form more of providing medical aid, minor educational facilities and housing. Activities expressly directed towards the development of the physical, intellectual, material and moral qualities which is the object of those interested in the proper use of workers' spare time are practically negligible as far as employers are concerned except in the case of some of the larger organisations such as the Railways, the Port Trusts and a few individual employers and private organisations. The notable exceptions among individual employers are the Tata Iron and Steel Company at Jamshedpur, the Empress Mills at Nagpur, the Our Imbby Group of Mills in Bombay, the Sholapur Spinning and Weaving Mills at Sholapur, the British India Corporation at Calcutta and the Buckingham and Carnatic Mills at Madras.

The need of Welfare Work is all the greater in this country because of the migratory habits of the workers. Situated in strange surroundings the majority of workers are exposed to all the temptations of the life of great industrial cities which gradually make for their demoralisation and ruin. If the worker is encouraged to spend his time in healthy recreation he may be saved from the attractions of the liquor shop. The provision of facilities which will add a little colour to the drab life in industrial employment will also tend to draw the workers nearer to the employer. It is clear therefore that one of the most essential conditions for the maintenance of a stable and efficient labour force is an improvement in the working and living conditions of the labouring classes. Satisfactory labour conditions are a stimulus and not a handicap to industrial progress. And hence much stress should not be laid on the financial aspects of Welfare Work. Although the increase in efficiency of labour will not completely compensate the employer for the expenditure that he will incur for providing additional facilities for the amelioration of labour, the employer can always depend upon the moral support of the workers and will thus be free from heavy losses due to reckless strikes owing to the absence of harmonious relations between the employers and the employed.

At the same time it is necessary to bear in mind that welfare activities such as are conducted in highly organised factories in the West presuppose a certain cultural basis which in its turn, largely depends upon literacy. The vast majority of the workers in India are illiterate and it is not to be expected that they can appreciate benefits which presuppose a certain standard of education even though the standard may not be very high. It is also difficult to expect the wholehearted co-operation of workers in schemes which are foreign to their habits and modes of living. Thus, the attempts made to

start schools have failed in many cases from the lack of interest shown by employees. In the case of sports also the results have not been very encouraging. Attempts have been made to provide amusement either by indigenous games or cinema entertainments but these also have had very moderate success. The labour force in this country is generally of a temporary character and heterogeneous in composition. Workers of the same communities naturally try to form themselves into separate groups, thus introducing some complications in any general scheme of welfare work. In spite of the above difficulties satisfactory progress has been achieved in recent years by individual employers and private organisations such as the Social Service League in Bombay. An All India Industrial Welfare Conference was convened in 1922 at Bombay by the Social Service League which had been entrusted since 1918 with the organisation and management of two workmen's institutes for the benefit of operatives employed in the cotton mills under the agencies of Messrs. Currimbhoy Ibrahim & Sons and Messrs. Tata & Sons. The Conference was attended by the representatives of the Central Government and of some of the Provincial Governments and was presided over by Mr. (now Sir) Atul Chatterjee. The object of the Conference was to discuss several problems connected with welfare work and to secure some co-ordination between the activities of the various agencies at the different centres.

In 1926 the Government of India requested all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed. The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference in connexion with the development of facilities for the utilisation of workers' spare time. The results of this enquiry which the Government of India hope to publish in due course will be of considerable interest. The Labour Office conducted an enquiry in the Bombay Presidency, the results of which were published in the issue of the *Labour Gazette* for January 1927.

Apart from the few individual employers who have organised welfare work on modern lines the first organised attempt to introduce welfare activities of a particular type was taken by the Bombay Millowners' Association early this year. In a circular letter dated 8th January 1928, addressed to the mills affiliated to the Bombay Millowners' Association, this Association have requested all mills in Bombay City to give their wholehearted co-operation to their efforts for devising machinery for the improvement of the relations between the management and labour by giving immediate effect, wherever it is possible, among other things, to those classes of welfare work which have been uniformly successful, e.g. (a) periodical social gathering of workpeople, (b) provision of free milk dispensaries as soon as financial considerations permit and (c) the establishment of creches at all mills.

Employment of Welfare Officers and Workers.—The All-India Industrial Welfare Conference of 1922 passed a resolution that

social service organizations should be asked to take up the work of training welfare workers. The establishment of workers' committees in all industrial establishments was also urged but very little progress appears to have been made so far in this direction.

In the Bombay Presidency except in the case of the Sholapur Spinning and Weaving Mills in Sholapur and the Bombay Shipyard Workmen's Institute at Bombay, no other employers have employed any special welfare officers or workers to conduct their welfare activities.

In Bihar and Orissa, the Tata Iron and Steel Company has recently appointed a welfare officer with an office and staff to co-ordinate the various welfare activities that have been carried on by the Steel Company.

In the Central Provinces and Berar, except at the Empress Mills, no regular staff of welfare officer and workers has been appointed.

In the United Provinces, the British India Corporation employ a full-time welfare superintendent and a trained staff consisting of 4 doctors, 5 nurses, 6 matrons, 8 compounders and a dozen midwives, 10 teachers and 2 sergeant patrols.

Messrs. Begg, Sutherland and Company have recently engaged the services of a superintendent to organize welfare work for their employees.

Provision of Educational Facilities by Employers.—A problem which is now assuming great importance is that relating to the education of the children of the workers from among whom the future supply of labour will be drawn but many workers do not keep their families with them for a sufficiently long period. The education of the adult workers presents difficulties because of the indifference of the average worker to education after the long hours of work in a factory. It is, however, being gradually realised that the efficiency of the workers cannot be sufficiently improved without education and some enlightened employers in the country have taken whatever measures that were possible to promote education among their workers also among their children whom they hope in time to attract to their mills. The nature of the special facilities provided in each Province for the education of the workers and their children are briefly as follows.

In Bengal, attempts have been made by some mills to set up day and night schools but many of such schools are reported to have been closed owing to the lack of interest shown by the employees. Except for the facilities for technical training that are provided at the Inchcape Mills Factory the Comptore Gum and Shell Factory and the Government Weaving School at Serampore there is little or no organised provision for industrial and vocational training in the industrial centres in Bengal.

In Bombay, the Bombay Municipality has introduced compulsory education in F and G Wards which are chiefly peopled by millhands. In the Government factories at Kirkee, the Kirkee Education Society which is well supported by the factory authorities conducts six night schools. The Gokak Mills Company maintains one night school for adult workers. In Ahmedabad one mill runs a school for half-

times and eight mills maintain schools for workers' children. Three mills in the Sholapur district and the Government workshop at Dapur provide for the primary education of half-timers.

The Social Service League, Bombay, maintains 9 night schools and a Textile Technical School at Parel, for imparting practical and theoretical training to actual mill workers. The Bombay Y.M.C.A. conducts 14 night schools with an average daily attendance of about 200. The Ahmedabad Labour Union conducted in 1928, 10 day schools, 12 night schools, one nursery school, one boarding school for boys and one boarding school for girls.

In Bihar and Orissa, the Tata Iron and Steel Company has established a Technical Institute at Jamshedpur to train in theory and practice certain selected students for positions in the operating departments. The Company also maintains twenty-two schools for the education of the children of its employees.

In Madras, seventy factories registered under the Indian Factories Act have provided schools for half-timers and in some cases for employee children also. The Buckingham and Carnatic Mills maintain a day as well as a night school. The day school is an elementary school with 5 standards and has a technical section attached to it.

In Burma, very few firms provide facilities for education. The Burma Oil Company maintains schools in the Yenang Yaug Oilfield for about 800 children and proposes to start a night school for its employees. The Burma Corporation makes an annual donation of Rs. 1,000 for the maintenance of the Anglo-Vernacular Middle School at Nambu and is also constructing a school at Bawdwin for the education of the children of its employees.

In the United Provinces, the British India Corporation maintained in 1928 four day schools for boys and girls, two night schools and two industrial classes, for employees. The High Mills at Cawnpore, the United Agra Mills, Agra, and the B. N. W. Railway Workshops at Gorakhpur also provide for the education of the children of the employees.

In the Punjab, only the new Egerton Woollen Mills Company, Dhariwal, maintains a school.

In the Central Provinces and Berar the Empress Mills in Nagpur have Nursery and primary classes for the children in the creches. The educational work outside the mills is conducted by the Young Men's Christian Association which has established 9 centres where the mill workers reside. Of these 8 centres have night schools. The Empress Mills also make annual contributions of about Rs. 2,500 to other schools where the children of the work people study.

In Assam, some of the tea gardens maintain schools for children but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount particularly as it interferes with the earnings of their children who find employment in the gardens. The Assam Oil Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees. No industry provides schools for adult labourers.

RAILWAYS.

Recreation.—Railways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for

recreation for their employees and their children. The number of recreational clubs or institutes provided on each railway are shown in the following table —

Name of Railway	NUMBER OF INSTITUTES FOR	
	Europeans and Anglo-Indians	Indians.
North-Western Railway	32	19
East Indian Railway	33	26
Eastern Bengal Railway	11	14
Burma Railways	15 in all	
Great Indian Peninsula Railway	27	29 (2 for all nationalities)
Bombay Baroda and Central India Railway	17	12
Bengal Nagpur Railway	14	19
Madras and Southern Maharatta Railway	24	7
South Indian Railway	19 in all	

Each institute is regarded as a club provided by the Railway free of rent. The institutes provide a reading room, indoor and outdoor games, etc., and are generally self-supporting although grants are made from fine funds to meet the recurring expenses in deserving cases. The railways also undertake to recover the subscriptions of the members through the paybooks and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways.

Sports committees and athletic clubs have been formed on several railways e.g. the G I P and the East Indian Railways with the object of promoting athletic sports among the employees and organising tournaments. The Indian Railway Athletic Association has been recently formed for the promotion and development of inter-railway athletic competitions of all kinds. This is a registered association and its membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association. Inter-district or inter-divisional competitions are also run by local sports committees with the idea of encouraging sports among all classes of staff. The inter-railway boxing, wrestling and foot-ball competitions are arranged in four groups.

The cinema shows and magic lantern lectures which are being recently organized for the recreation of railway employees are growing in popularity with the staff.

Education.—Almost all Railways provide facilities for the education of their literate staff as well as the children of Railway employees. The progress made in this direction on each railway may be briefly stated as follows —

The M. W. Railway have started two experimental schools for adult workers in the running locomotive sheds at Lahore and Bhi respectively. It is also intended to open

another at Kotri shed shortly. The experiment has so far been confined to the locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees the daily average attendance at these schools being 309. On the Burma Railways educational facilities for adult work men have hitherto proved a failure and another experimental school has recently been opened for firemen.

The B E & C I Railway has recently opened classes for imparting instruction in the three R's at 5 centres on the Broad Gauge and 3 on the Metre Gauge systems. As an inducement to study a bonus of Rs. 5 is paid to each man passing a simple test. On the A B Railway, the Locomotive Department holds classes at Luding, Badarpur and Chittagong to assist drivers to qualify as English speaking which grade carries a higher pay. The only facilities given by the B & N W Railway are first aid classes and subjects of a technical nature in the Locomotive Department. The Bengal Nagpur Railway provides 14 schools for imparting elementary training in reading, writing and rudimentary arithmetic to Indian drivers, shunters and firemen so as to enable them to make themselves personally acquainted with the rules and orders affecting train working. On the M & S M. Railway there are two night schools at Hubli and Guntakal respectively both of which receive financial support from the Company.

Schools for the education of adult workmen do not exist on the G. I. P. Railway but a school is established at Bina for imparting technical instruction and conducting refresher courses in Railway working.

For Workers' Children.—The facilities provided for the education of the children of railway employees are as under: 97 schools for European and Anglo-Indian children and 123 schools for Indian children are maintained at suitable centres and the total number of pupils on the rolls is 4,155 and 15,907 respectively. The total expenditure from revenue on the European and Anglo-Indian schools is Rs. 402 lakhs per annum and on the Indian schools Rs. 14 lakhs. The Railway Department also aids certain schools for children of railway employees. The total number of children in railway aided schools is 3,531 (European and Anglo-Indian) and 7,704 (Indian) and the total annual grants made by the Railway are Rs. 49,805 and Rs. 46,584 respectively. The Railway Department also gives direct financial assistance to its employees towards the education of their children in certain hill schools. The total expenditure on this account in 1927-28 was Rs. 3.5 lakhs for Europeans and Anglo-Indians and Rs. 28.8 thousands for Indians. Facilities are also afforded by the grant of passes and concession tickets to enable the children to attend schools.

The present methods of assistance have recently evoked public criticism on the score of their being more favourable to European and Anglo-Indian employees than to the Indian and with a view to eliminating all trace of racial discrimination the Railway Board placed Mr. C. R. W. Jones C.I.E., I.E.S., on special duty in 1927 with instructions to collect all facts and figures regarding the assistance given by railways for the education of the children of their employees. On a consideration of Mr. Jones' report the Board have now formulated their future policy on the following lines—

All railway schools would be transferred to local authorities or private bodies, special grants being given out of railway funds where neces-

sary. The assistance given by the Railway Department would be confined to employees who draw pay below a prescribed maximum and obliged to send their children to boarding schools. The assistance would take the form of grants to the employees of a fixed proportion not exceeding one-half of the board and tuition fees, the proportion depending upon the pay drawn by the parent and falling with the increase in pay. The assistance would be open to all employees without distinction of community race or creed.

Several companies' railways have also signified their willingness to adopt a similar policy. But the question is still receiving further consideration because of the representations received in connexion with the scheme.

Welfare Funds.—The fine funds to which are credited the provident funds become forfeited as well as the fines levied on the staff have formed a valuable source from which it has been possible for Agents to give assistance to the subordinate staff for recreation and educational purposes as well as compassionate grants in cases of exceptional hardship. The principal railways contributed in 1925-26 Rs. 81 thousand for schools and Rs. 3.06 lakhs for recreation clubs from the fine fund.

Co-operation.—The Railway Administration have noticed that heavy indebtedness degrades the employee and impairs his efficiency and they have therefore encouraged the formation of co-operative credit societies and co-operative stores by the employees.

Co-operative Credit Societies have been formed on all railways and are managed by committees generally elected from among the shareholders. But in some cases the heads of the departments are required to be the chairman of the Committees and they have power to nominate some of the members of the committee.

WAGES

It was in 1873 that one of the earliest attempts to collect wage statistics in India was made by issuing instructions to District Officers to submit half yearly returns showing the average monthly wages of certain classes of skilled and unskilled labour. The returns thus collected were utilised for compiling a series of comparable statistics of wages for selected Districts in each Province and these statistics were published in the publication 'Prices and Wages' issued annually by the Director-General of Commercial Intelligence and Statistics. A reference however, to Mr. Dutt's Report on an Inquiry into Rise of Prices in India would show that these statistics were found to be wholly unreliable and consequently these half yearly returns from District Officers have been discontinued since 1918. In their place a quinquennial wage census was adopted in all Provinces, except in the Central Provinces where an annual return was obtained from District Officers. The first quinquennial wage census was held in 1911-12 and the second in 1916-17. The statistics regarding wages continued to be published in 'Prices and Wages' which gave the results of the quinquennial wage census in respect of a few urban and rural occupations. As the statistics were still far from satisfactory the third wage

census, which was due in 1921-22, was abandoned except in Madras and the Punjab. In 1921 an attempt was made by the Government of India to hold an All India census of industrial wages with the active and voluntary co-operation of employers but nothing could be done partly because a number of employers either failed to submit returns or submitted incomplete returns and partly because neither the Central nor the Local Governments were able to provide the staff required for the purpose owing to financial stringency. The annual issues of Prices and Wages were also suspended in 1923 as a result of retrenchment and no regular official wage statistics are now published for British India as a whole.

In the United Provinces a scheme for a census of industrial wages to be taken along with the regular census was considered but was not carried through. A periodical survey of wages has been carried out every five years since 1912 in the Punjab. These surveys deal with the wages of certain classes of workers in three principal towns in selected villages unaffected by urban conditions, and at certain Railway stations to secure a means of comparison with rural wages in the same neighbourhood. Beyond

the figures of average monthly wages of certain classes of labour submitted by factories in all Provinces every year for inclusion in the annual Reports on the Administration of the Indian Factories Act, no regular and detailed statistics of industrial wages are available in Bengal and in the Central Provinces and Berar. In Madras quinquennial wages censuses have been conducted since 1906 showing the average wages of certain artisans (as well as farm servants employed in agricultural labour) in respect of homogenous tracts and districts. These censuses, however, only related to rural and urban wages and not to industrial wages. A thorough investigation of the conditions of labour and particularly the rates of wages on tea estates in

Assam was made in 1921-22 by a Committee appointed by the Government of that Province. The Labour Office of the Government of Bombay conducted three enquiries into the wages of workers in the cotton mills in the Bombay Presidency in 1921, 1923 and 1926 respectively. Apart from these enquiries, the Labour Office has also conducted enquiries into (1) Wages of peons in Bombay (2) Agricultural Wages, (3) Wages of Municipal workers, (4) Clerical Wages in Bombay City and (5) Wages of Printing Press Workers in selected Printing Presses in Bombay City. The results of all these enquiries except the last have been published either in the form of special Reports or in the "Labour Gazette."

WAGE RATES.

Agriculture—Whether wages paid to agricultural labour in India have kept pace with the increase in the cost of living is, for several reasons, a very difficult question to answer. Firstly conditions vary so markedly between provinces and province that it is almost impossible to obtain accurate and comparable figures of wages for different classes of agricultural labour. Secondly there exists a variety of methods adopted for remunerating the workers engaged in different agricultural areas in India. For example, in the Punjab, there are four forms of wages, such as (a) purely cash wages, (b) cash wages with supplements which may consist of food, tobacco, lodging, bedding, clothing, etc. (c) purely grain wages, and (d) wages other than in cash or grain. In the Punjab the last quinquennial wages survey was held in December 1927. This survey shows that the following were the average daily wages of the three important classes of agricultural labour in rural areas in the Punjab—

Carpenters	16 to 22 annas a day
Masons	16 to 22 annas a day
Unskilled labourers	5½ to 14 annas a day

As regards the last occupation it may be pointed out that the most frequent wage was between 7½ to 8½ annas. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnings of three classes of agricultural labour, viz. skilled labour, ordinary labour and field labour in each of the 28 districts of the Bombay Presidency separately for urban areas and rural areas

for each of 28 years from 1908 to 1922. The figures for each year from 1923 to 1927 have been published in the Bombay Administration Reports. The wages prevailing in other provinces for similar types of labour do not compare very unfavourably with wages in the Bombay Presidency for any particular year for which a comparison is made. This statement requires an important qualification. It is not meant that the money amounts actually paid are similar. The rates of wages in different provinces vary according to the extent of their industrialisation and money wages in provinces which are mainly agricultural are on a lower level than the money wages in Provinces which are highly industrialised such as Bombay and Bengal. There is no doubt whatever that wages have considerably improved in all parts of India between 1916 to 1928. Taking the Bombay Presidency as a whole the downward tendency in the level of wages which set in 1925 and continued up to the end of 1927 was checked during the year 1928 during which period wages of all classes of agricultural labour, except field labour in urban areas and ordinary labour in rural areas either remained stationary or showed a definite upward tendency.

Comparison of conditions in India to-day with the pre-war year shows that during this particular period the condition of the Indian labourer has undoubtedly improved. This is amply proved by the figures given below showing the index numbers of daily wages of skilled labourers, ordinary labourers and field labourers for urban areas and for rural areas for the Bombay Presidency

AGRICULTURAL WAGES (NOMINAL)
Index Numbers for the Bombay Presidency (including Sind) 1913=100

Year	Urban areas			Rural Areas		
	Field Labour	Ordinary Labour	Skilled Labour	Field Labour	Ordinary Labour	Skilled Labour
1921	179	184	180	169	148	186
1922	189	192	195	170	162	179
1923	200	206	196	171	167	187
1924	195	198	209	178	161	211
1925	221	208	224	206	181	211
1926	224	204	216	193	181	215
1927	200	192	211	176	176	206
1928	191	192	212	189	215	210
1929	188	193	206	180	179	213

The Cotton Textile Industry.—The most important centres of the cotton textile industry in India are situated in the Bombay Presidency. The main sources of information as regards the wages paid in this industry are the Reports of three Enquiries conducted by the Labour Office of the Government of Bombay, into Wages and Hours of Labour in the Cotton Mill Industry in the Bombay Presidency.

It is claimed that the 1926 Enquiry as compared with the previous two Enquiries was more satisfactory in its method, more detailed in its scope and more accurate and reliable in its results as the information collected related to each individual worker and not to groups of workers in each occupation as was the case in the previous Enquiries. The results of this Enquiry give among other things figures for average daily earnings of all occupations of cotton mill operatives, average monthly earnings for operatives covered in Bombay and Sholapur, the average number of days worked, the number of operatives working full time i.e., working on all the working days during the Census month, the average earnings of these working full time, frequency of attendance for the mills in Bombay the percentage absenteeism by departments and details regarding amounts of bonuses secured by the workers.

Wages in the Bombay and the Sholapur mills are paid monthly irrespective of the fact whether they are based on time rates or piece rates or fixed on a daily or a monthly basis or in any other manner. While in the case of the Ahmedabad mills wages are paid fortnightly or by haptas referring to a period generally of 14 days for piece workers and to a period of 16 days for time workers.

Different systems are adopted at these three centres with regard to the methods of calculating wages. In the case of the mills in Bombay City there is first a 'basic' rate to which is added a dearness allowance of 80 per cent. for male piece workers and 70 per cent. for male time workers and all female workers. Those mills which grant a good attendance bonus add the amount of the bonus granted, to the gross wage from which are deducted any fines that might be inflicted before arriving at the net wages payable.

The term 'basic' in the case of the Bombay mills may be generally considered to apply to the pre-war year although in the case of some individual mills it might apply to any year between 1913 and 1918 in which year the first increase of 15 per cent. was granted as dearness allowance. This was increased to 35 per cent. on the 1st January 1919. The next increase granted on 1st February 1920 was 20 per cent. extra to male workers on time rates and to female workers both on time and piece rates, and 40 per cent. extra to male operatives on piece rates—the total percentages amounting to 55 and 75 respectively. On the 1st November 1920 the 55 per cent. was raised to 70 per cent. and the 75 per cent. to 90 per cent. There have been no changes in these percentages since the year 1921.

In the Ahmedabad mills there is a complete lack of uniformity in the methods adopted for calculating the dearness additions and deductions before arriving at the final earnings.

The methods of calculating wages in Sholapur are different from those in Bombay and Ahmedabad. There are five items which go to make the full wage of an operative. These items are (1) the basic rate, (2) dearness allowance which is 35 per cent. in the case of all female workers and all male time workers and 40 per cent. in the case of all male piece workers, (3) the number of grace days granted for which payment is made, (4) bonus, and (5) the benefit derived for the grain concession. The following table gives the average daily earnings by centres for all adult male operatives, all adult female operatives, all children and all adult operatives, covered by the 1926 Enquiry —

Centre	AVERAGE DAILY EARNINGS FOR			
	Men	Women	Children	All adults.
	Rs. a p.	Rs. a p.	Rs. a p.	Rs. a p.
Bombay	1 8 0	0 11 11		1 5 3
Ahmedabad	1 6 8	0 12 6	0 5 6	1 4 8
Sholapur	1 0 5	0 6 8	0 4 0	0 14 8

The average monthly earnings of all workers in mills selected for the 1926 Enquiry at Bombay and Sholapur in the month of July 1926 in each age and sex group were as follows —

Sex and Age group	CENTRE.	
	Bombay	Sholapur
	Rs. a p.	Rs. a p.
Men	37 10 2	23 15 5
Women	17 12 4	9 15 7
Children		5 10 4
All adults	32 14 0	21 7 9

The following table shows by centres for each sex and age group the average monthly earnings of all operatives who worked on all the working days in the census months for Bombay and Sholapur and for Ahmedabad. The figures for Ahmedabad were arrived at by multiplying the average daily earnings by 27.

Average monthly earnings of Full Time Workers

Sex and Age group.	CENTRE.

Jute Industry

The jute industry holds the premier position amongst the industries in the Bengal Presidency. The following table gives the average monthly wages of some important occupations in a jute mill. The figures are not the exact averages of wages of the total number of employees in the industry. They are averages obtained from the actual payments made in some representative mills.

Department.	Designation	Average monthly wages	
		Multiple shift.	Single shift.
	<i>Men</i>	<i>Rs a p</i>	<i>Rs a p</i>
Roving Machines	Rovers	12 15 0	14 7 0
	Shifters	12 6 0	14 2 0
Spinning Frames	Warp spinners	13 4 0	16 14 0
	Wet spinners	16 0 0	17 10 0
Winding	Bobbin cleaners	10 0 0	11 0 0
	Warp winders (piece workers)	21 6 0	23 0 0
Weaving	Wet (,)	26 8 0	28 2 0
	Hessian weavers (,)	28 3 0	31 0 0
Dressing and Benning	Sacking weavers (piece workers)	29 5 0	32 1 0
	Boomers and dressers	28 8 0	32 0 0
Sack sewing workers	Sewing machine	21 11 0	25 10 0
Engineering Section Engine Staff	Machine sewers (piece)	19 0 0	22 8 0
	Oilers	28 1 0	30 2 0
Workshop hands—	Firemen	34 0 0	36 0 0
	Mason	34 0 0	36 0 0
Machine shop fitting	Carpenters (Chinese)	85 0 0	98 5 0
	Carpenters (Indian)	30 0 0	33 2 0
Tin Smithy	Turners (Metal)	40 0 0	46 0 0
	Tin Smith	30 0 0	30 0 0
Blacksmith shop	Blacksmith	36 0 0	36 0 0
	<i>Women</i>		
Batching Softeners	Feeders	11 12 0	13 5 0
	Receivers	11 6 0	13 5 0
Teasers Preparing Breaker Carding Ma chines	Feeders	9 6 0	12 0 0
	Receivers	9 8 0	11 13 0
Finishing Carding Machines	Feeders	9 0 0	11 2 0
	Receivers	10 6 0	11 7 0
Drawing machines	Feeders	9 7 0	11 0 0
	Receivers	10 0 0	11 2 0
Roving machines	Feeders	10 0 0	11 2 0
	Sweepers	9 8 0	11 2 0
Twist Frames Weaving	Twisters	13 8 0	14 16 0
	Sweepers	12 1 0	12 10 0
Sack Sewing	Hand Sewers	18 5 0	14 11 0

It will be seen from the above table that there is an appreciable monetary advantage to workers in the single-shift system.

MINES.

The tables given below show the daily earnings in the month of December for each of the two years 1928 and 1929 for workers in the main occupations in coalfields and the other important mines, in British India.

Daily earnings of underground workers in important coalfields in British India.

Gins and Presses

The male coolies in the gin factories in Madras and the Punjab earn on an average annas 8 per day while the female coolies get only as 5-1 and as 6 respectively. In the Central Provinces the average daily earnings of male and female coolies are as 10-2 and As. 5-10 respectively.

The average daily wages of female press coolies in Madras and the Central Provinces amount to annas 5-10 while those of male coolies amount to annas 9-6 and annas 12-10 respectively.

The Plantations.—Labour in the tea gardens in Assam is paid on a piece-work basis in addition to the standard daily task which the worker must execute in order to earn his wages (called *Harive*) the labourer is given an opportunity at certain seasons to supplement his earnings by the performance of second task the payment for which is known as *Nees*. In some cases where it is impracticable to prescribe a definite task as in leaf plucking at the beginning and the end of the season payment is made by time. A distinctive feature of work

In the gardens is that the labourer usually brings his family with him and the wife and sometimes the children are also wage earners. The joint earnings of a family must always be taken into consideration. The average family of a labourer has been calculated as consisting of one working man, one working woman about three-tenths of a working child and non working child and about two tenths of an adult non-working dependant. The following table gives the average monthly earnings of the labourers in the tea gardens in Assam.

Table showing the average family monthly earnings in the tea gardens in Assam calculated on the average daily strength in 1914 1922 and 1928

Periods of Wage Payment—There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various important branches of organised industry in India. In scarcely any industry is there a single period of wage payment. Different systems are found in establishments belonging to the same industry and in the same district and within the same establishment different classes of workers are frequently paid for different periods. The month the fortnight and the week are, generally the periods of wage payment in Cement and Brick Works Cotton Ginning and Pressing Works Flour Mills and Engineering Works. Monthly payment of wages is mainly adopted for workers in Printing Presses, Municipalities, Tramways and Railways. In the Cotton Mill industry wages are calculated on a monthly basis in all the mills outside Ahmedabad. In the case of the Ahmedabad mills, wages of process operatives are calculated on a fortnightly basis and of workers in the maintenance department on a monthly basis.

In tulces, tea gardens and rice mills the predominant periods of wage payment are a month and a week. In jute mills wages are calculated per week. Wages are calculated on both the monthly and the fortnightly basis in the Iron and Steel Industry, Sugar Mills and in Tanneries. The system of monthly payment appears to be universal in its application to supervisory and clerical staffs engaged in all different industrial establishments, while the

most general system in the case of casual labour is of a daily payment of wages.

Periods elapsing before payment—The waiting period or the time which elapses between the end of the period for which wages are earned and the date of payment varies considerably from industry to industry and from establishment to establishment in the same industry. It may be generally stated that the longer the wage period the more delayed is the payment of wages. Monthly wages are not paid so promptly as fortnightly wages, weekly wages are withheld for still shorter periods and daily wages of casual labour are nearly always paid on the day on which they are earned or on the following day. Speaking generally the average period of waiting may be considered to be 10 to 15 days in the case of monthly payments, 5 to 7 days for fortnightly payments and 2 to 4 days in the case of weekly payments. Another factor which affects the period of waiting is the method of payments. Where workers are paid on piece rates, intricate calculations are required to ascertain the amount due and consequently piece rate wages cannot be paid so promptly as wages of workers on fixed time rates of pay.

Indebtedness prevails to a very great extent among the labourers but no reliable figures are available except those for the Bombay Presidency which were collected by the Bombay Labour Office during its enquiries into the workers' family budgets for different centres. From the statistics of the Empress Mills the percentage of labourers indebted appears to be more than 50. Though exact figures for the Punjab are not available it is reported that the volume of indebtedness amongst the agriculturists is greater than anywhere else in India. As regards urban and industrial labourers it may safely be assumed that a greater majority are in debt to their food suppliers. In Madras the indebtedness of the worker is heavy especially in the case of plantations where it is reported that 75 per cent of the wages of the labourers are taken away by money lenders on pay days. The mine managers of the Jharia coalfields in Bihar and Orissa generally put this figure at one week's wages. It is also stated that the extent of indebtedness varies with caste and social custom. In Bombay City interest on debts forms nearly three per cent of the total monthly expenditure. Of the families considered for the Labour Office enquiry no fewer than 41 per cent were in debt. The extent of the indebtedness of the family is ordinarily the equivalent of two and a half months earnings. The extremes were 14 months and one-third of a month's earnings respectively. As regards single men for whom 603 budgets were collected 45 per cent were in debt the average expenditure on interest being as 12-3 and the average expenditure on interest for those in debt being Rs 1-11-2 per month. Enquiries for the Bombay Port Trust workers showed that over 80 per cent of the families considered were found to be in debt. In the majority of cases the amount of debt varied from a month's income to four months income. In Ahmedabad during 1926 about 60 per cent of the families were in debt. The amount of debt varied from a few rupees to many times the monthly income. According to an enquiry made by the Labour

Office in the year 1925 into the family budgets of cotton mill workers in Sholapur City 83 per cent. of the cotton mill workers' families in Sholapur were in debt the extent of which varied from less than a month's income to many times the monthly income. In 48 per cent. of cases however it was equal to between one and four months income of the family.

Bonus and Profit Sharing Schemes.—The successful working of a profit sharing scheme pre-supposes the realisation by the worker of an identity between the various interests engaged in the concern and a conscientious effort on their part to do their best for its maximum success. The employers of labour do not feel that labour conditions in India are such as to justify the hope that this high ideal of co-operation will be realised in a substantial measure in practice. The only solitary concerns in which profit sharing schemes have been tried are the Tata Iron and Steel Company and in the Buckingham and the Carnatic Mills. In 1928 the Tata Iron and Steel Company introduced a scheme under which a monthly bonus based on production is paid to all men drawing less than Rs. 300 per mensem or Rs. 10 per day whose work contributes to the production obtained and who have been in the Company's service for at least six months. In the Buckingham and the Carnatic Mills a bonus is paid to the workmen on a basis relative to the dividend declared.

Bonuses are paid for a variety of reasons. Some concerns grant bonus for regular attendance and for economical utilization of material. In some collieries in Bihar and Orissa a worker

is paid sort of bonus for working six days a week. A bonus is also being granted for raising and loading extra tubs. The Tata Iron and Steel Company grant bonuses (1) for general production (2) for departmental output and (3) regular attendance. This is paid to all employees drawing less than Rs. 8 per day. The Company has also introduced a Jack pot scheme. The idea of this scheme is that if 50 men are required to perform certain duties connected with the operation of any unit and the full force is not present the wages which would have been payable to the absentees are distributed amongst those present.

The system of paying bonus in addition to a cash wage either for better work or for better attendance obtains in several industrial concerns in the Bombay Presidency and may be said to be almost general in textile mills especially in Bombay and Ahmedabad. An enquiry by the Labour Office in 1926-27 showed that in the textile industry no fewer than 109 out of the 144 mills in the Presidency which furnished information reported that bonus was granted for regular attendance and 76 or 52.8 per cent. stated that bonuses were given for turning out work better than the specified standards. Several cotton gins and presses also reported that such bonuses were granted but in the majority of such cases these rewards took the form of annual bonuses given on the results of a season's working. In a few cases the system is similar to that of profit sharing—the bonus payable being dependent on the profits made by a concern during the year. Bonuses for better work were however, not generally granted in Public Utility Companies, Municipalities, commercial offices and Government and other non factory organisations.

RAILWAYS.

Wages.—Owing to the different types of railways have therefore been set out in the grades of pay which are prevalent on the Railways it is not possible to give particulars for all of them. Scales of pay of some important classes of railway servants on some principal grades

Besides the usual pay the employees of the railways are granted allowances and perquisites for special work, climatic and local conditions, etc.

Amount sent to villages.—In the absence of a completely organised industrial labour force in India, the practice of remitting part of the wages earned by workers in industrial centres to their place of origin appears to be very common. But no authorised or statistical information for a definite period of time is available as regards the amounts sent by workpeople in this manner. If statistics pertaining to this subject were compiled, it would help a good deal in estimating the agrarian contact of Indian industrial workers. In the Central Provinces and Berar 80 per cent of immigrants from the United Provinces leave their families behind in their villages to look after cultivation. These labourers are reported to be remitting more than 50 per cent of their income home. The other immigrants in that province from Central India and the Bombay Presidency are said to be sending 25 per cent of their earnings to their homes. Estimates of amounts sent by money order by the various post offices in the Jute mill areas in Bengal are annually published in the reports of the Indian Jute Mills Association. The figure for 1928 comes to Rs 1,73,57,816-1-2, but it does not purely represent the amounts sent by Jute mill employees only. Labourers from coal mines in Bengal coming from outside the coal fields are reported to send or take home to their villages from 30 to 40 per cent of their earnings. In the case of the miner in the mining fields of Bihar and Orissa it is roughly estimated that he sends home, all his savings—which amount to about 8 annas to Rs 1-8-0 per week. Results of a special enquiry made in the case of an important cotton mill at Cawnpore in which wages are paid fortnightly showed that during

the particular period of two weeks covered by the enquiry, 8 per cent of the wages received by workmen was remitted by money orders through the office attached to that mill. In the course of its family budget investigation, the Labour Office of the Government of Bombay collected some information regarding remittance of amounts by workers' families. In Bombay City a large number of workers do not maintain an establishment, but live as bachelors and though married keep their dependants in their native places. In the case of resident families the average monthly amount remitted comes to Rs 111-1 which constitutes 3.2 per cent of the family income which is Rs. 52 4-6 per month. In the case of persons living singly in the Bombay City the average monthly remittance comes to Rs 117-1 which constitutes 3.2 per cent of their monthly income. The labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore remittances to dependants is not an important item in the worker's budget. It appears that nearly 7 per cent of the working class families in Ahmedabad remit money to their dependants living away from them. The average for only those families remitting money comes to Rs 6-6-9 per month. Sholapur draws its labour force from the immediate neighbourhood and the labour there is not of the same cosmopolitan character as in Bombay. Of the total number of families whose budgets were collected during the family budget enquiry at that centre only 6 per cent reported that they had to remit money every month to their dependants in villages. The average of the amount remitted by such families comes to Rs 4-12-7.

EXTENT OF STANDARDISATION

In spite of a good scope for effecting standardisation of wages in certain important industries in India, few attempts appear to have been made in this direction. Wages are not standardised in different industries or in the same industry. Besides, it is found that different rates are prevalent in the same industry in the same locality and even for the same type of work performed in a unit. In the Tata Iron and Steel Company a standardisation of rates has been carried out as far as could be done in order to minimise complaints which are frequently made that men when engaged are promised certain rates and eventually they find that they get somewhat less. Under this standardisation scheme each job is rated and every employee understands what his minimum and maximum rate will be in that grade and what he can expect when promoted from it to other grades. This has the advantage of rating all men doing the same work so as to yield the same or about the same remuneration irrespective of the Department in which employees are working. Standardisation of wages has been effected in the Indian Cable Company in those cases particularly where men perform the same kind of work with the exception that some mechanics who are more efficient receive higher rates than others and some old workmen are still receiving higher rates than the rate of the job. Prior to the proposal made by the Bombay Millowners Association during the general strike of the year 1928 to standardise wages in all the cotton mills in

Bombay City there was nothing like standard rates of wages in any industry or centre in the Bombay Presidency except to a limited extent in the case of basic time rates for process operatives in the spinning sections in the Ahmedabad cotton mills. There exists no standardisation or similarity in rate whatever in the Ahmedabad mills with regard to piece rates. These vary from mill to mill for the same class of production although two or more mills may give similar rates. Proximity plays an important part in the fixing of time and piece rates in all industries at all centres. There is little similarity between the rates of different workers of the same class even in the same mill, the rates depending on the degree of individual skill, industry and experience. The question of standardisation of wages in the cotton mills in Bombay City has been under consideration by the Bombay Millowners Association for several years. The advantage of standardisation was perceived by the Association as far back as 1891 when the late Honourable Mr N N Wadia had prepared a draft scheme. The attempt was, however, not successful. Several attempts were made subsequently, but for one reason or another the old system was allowed to continue. In January 1927 the Indian Tariff Board (Cotton Textile Industry Enquiry) definitely recommended standardisation of wages.

In accordance with this recommendation the Bombay Millowners Association appointed a sub-committee to "investigate and report as

to the industries which might reasonably be taken towards the standardisation of muster rolls and wage rates." The sub-committee called for information from all the mills affiliated to the Association regarding the rates of wages paid and the number of men required for stated operations for a certain number of machines in each mill. This was classified and tabulated and averages of the rates of wages were arrived at. All bonuses like the good attendance bonus, weekly bonus, electric light bonus etc were consolidated in the rates proposed. The main principles on which the standardisation scheme was based were as follows —

- (1) There should be no variation between mill and mill in the rates of wages of operatives of the same class doing the same amount of work with the same skill and similar machinery and material and that variations in the earnings of individuals should depend on their individual labour and skill as tested by production
- (2) Operatives should not suffer owing to defects in machinery or material
- (3) All the operatives except the weavers should get at least the same average wages that they have been hitherto getting provided they work with reasonable efficiency

It was proposed, however, to effect a cut of 7½ per cent in the average wages of weavers during standardisation. This scheme as put forward by the Bombay Millowners Association was considerably modified as a result of discussions that took place between the Sub-committee of the Association and the Joint Strike Committee which was formed during the General Strike of the Bombay cotton mills in 1928. The scheme was considered by the Bombay Strike Enquiry Committee whose findings on it are given in the Section on Conciliation and Arbitration. The scheme has not, however, yet been put into practice.

Application of a Minimum Wage Principle—One of the main objects of minimum wage legislation is the prevention of sweating or the prevention of the payment of unduly low wages to the workers and the elimination of unfair competition between the employers with regard to wages. The payment of unduly low wages in any occupation or industry may be due either to depression in the industry or to an inefficient organisation of production or to exploitation of labour. With regard to the first two cases, minimum wage-fixing machinery is unable to change the economic condition of an industry while it is closely related to the third cause. Exploitation of labour may be defined as taking advantage of the inferior bargaining power of the workers to pay them a lower wage than that justified by the economic value of their work. This weakness in bargaining power is due to inefficient organisation, but minimum wage-fixing machinery, by establishing greater equality of bargaining power can ensure the payment of a wage "adequate to maintain a reasonable standard of life." It can also indirectly help to develop organisation amongst the workers. Besides this, minimum wage legislation, like any other piece of social legislation, goes a long way in promoting industrial peace.

Minimum wage laws differ considerably with regard to the basis adopted for fixing wage rates. The three main bases of fixing minimum wages are (1) the fixing of minimum wages in any trade in relation to the wages paid to workers in the same trade in adjoining districts, (2) the living wage and (3) the capacity of an individual industry to pay what is regarded as the minimum wage. When the bases of legislation to be framed are decided upon there are various methods of applying these principles. By the first method different minima may be fixed for different industries by ad hoc boards appointed to deal with each industry as is done under the Trade Board system in England and by Wage Boards in certain Australian States. By the second method, national minima may be fixed for various industries as is done in certain parts of Canada, the United States of America etc. The third method aims at enacting a minimum wage for general application to the country as a whole. The Minimum Wages Act of New South Wales of 1908 is an illustration of this.

The importance of Minimum Wage Legislation can be better judged when it is stated that 'the provision of an adequate living wage' is mentioned among the problems of urgent importance in the Preamble to Part XIII of the Treaty of Peace. The International Labour Conference at its Eleventh Session held at Geneva in 1928, adopted a draft Convention and a recommendation concerning the creation of minimum wage fixing machinery. The Convention contemplates the creation of such machinery only in the case of trades or parts of trades (and in particular homeworking trades) in which no arrangements exist for effective regulation of wages by collective agreements or otherwise and in which wages are exceptionally low. A State Member ratifying this Convention is placed under an obligation to create such a machinery and to communicate annually to the International Labour Office a general statement giving a list of trades or parts of the trades in which it has been applied and certain other particulars. The nature and form of the machinery and the trades to which it should apply are considerations which are left to the discretion of the State concerned.

The acceptance of this Convention by India would mean the creation of an extensive machinery for fixation of wages in several trades as labour is for most part unorganised in this country. But the fixation of a minimum wage in India is itself a problem beset with great difficulties. In many countries, even in those with advanced labour legislation, minimum wage regulation has received little consideration. This question is quite new to India and has not been considered in any province except probably in Bengal where a resolution was moved in the Legislative Council of that province, but it was lost. Wages in India are not standardised and until in practice wages in the same or similar industries are more or less on the same level, it will be very difficult to introduce or to operate successfully any scheme of minimum wages. A further difficulty arises from the fact that the cost of a suitable standard of living varies from province to province and as between different parts in a province. It is also doubtful whether the fixation of a minimum wage would be very

beneficial to labour in its present unorganised state in India as there is always a tendency for wages to gravitate towards the minimum fixed by law.

The only instances in which minimum rates of wages were fixed by statute in India was in connection with indentured labour on tea estates in Assam. But with the abolition of such labour the law is no longer in operation. The recent occasion on which this question of a minimum wage was considered in India was in relation to the Bombay cotton mills. The observations of the Bombay Strike Enquiry Committee who considered this question are significant. No definite standard for a minimum wage was suggested by them as it was not within

the scope of the terms of their reference, but they said: "In the present case, we have material for safely saying that any considerable increase in the wages bill would hamper the industry to an unjustifiable extent, in the existing circumstances of trade depression, but we may well decline to go further and say that the state of the trade does not permit of even a small increase in the lowest wage proposed to be paid. If it is shown that that wage does not enable the worker concerned to maintain a suitable standard of living." Discussing the question whether the minimum wage should apply to female as well as male operatives the Committee however arrived at the conclusion that a woman can maintain herself in Bombay on Rs 18 per month.

DEDUCTIONS.

In June 1926 the Government of India requested Local Governments to make enquiries in their respective administrations, as to the extent to which fines and other deductions were being realised by employers in India from their workpeople. The views of Local Governments were also invited on the desirability of taking any action legislative or otherwise to counter any abuses which might be found to prevail. The information given below is based mostly on the various Provincial enquiries made for the purpose, but there is no reason to believe that the conditions have changed materially since then.

The system of making deductions from wages in respect of fines is general in the textile industry, and other industrial concerns. With regard to factories the system exists in almost all Government and Local Fund factories and in the majority of the more organised and larger

workshops. It is also associated with municipalities, factories and establishments working regularly throughout the year. It does not appear to be the general practice in seasonal establishments such as gins and presses. In offices the system is almost wholly limited to the fining of peons and messials in the establishments where the system exists although in a few cases clerks are also occasionally fined. Fining is general in the large hotels, clubs and restaurants but it can be said to be almost absent in most of the larger commercial organisations such as shops, stores, etc. The only notable concerns in which fines are very rarely imposed are the tea gardens in Assam and Bengal and the coal-fields in Bengal and Bihar and Orissa. The abuse is said to be limited by the consideration that the shortage of labour compels the employers to treat their employees with every consideration.

COST OF LIVING AND STANDARD OF LIFE

A large number of strikes and lockouts in India since the war were due to wage disputes and in the absence of any reliable data regarding the movements of prices and their effect on the cost of living of the working classes it was found extremely difficult to arrive at any satisfactory conclusions about the comparative relation between wages and cost of living. The Government of India took up the question of constructing cost of living index numbers for the working classes and after a Conference held in Delhi at the beginning of 1921 they addressed Local Governments on the subject of index numbers.

The chief difficulty in the preparation of a satisfactory scheme designed to measure movements in the cost of living of industrial classes throughout India was the absence of any estimate of the comparative expenditure of the industrial workers on different items that could be regarded as even moderately correct. The basis for calculating such expenditure is usually furnished by the collection of budgets showing the actual monthly expenditure for typical families. But no budgets on which reliance could be placed were then available. An alternative method of ascertaining the comparative expenditure is to estimate the exports, imports and production of different commodities for a particular area, and then arrive at the average quantity consumed

by the inhabitants of that area. The only area for which it is possible to obtain statistics of exports, imports and production is India as a whole so that an index number for India or for any part of India constructed on these lines is open to criticism on two grounds apart from any inherent errors in the statistics used. In the first place it assumes that the differences between one province and another are not such as to vitiate the application of averages based on All-India figures to particular industrial centres. Secondly, it ignores differences between the mode of living of the industrial classes and that of the population of India as a whole. The Government of India recognised the possibility of constructing index numbers by the aggregate expenditure method, but cast doubts on the appropriateness of this method as applied in India, and suggested that, while it might be used in the first instance, the results should be checked by a collection of family budgets.

The majority of Local Governments were willing to co-operate but the most important exception was Bengal where financial stringency was making itself felt. But the investigations led the Government of India to the conclusion that the construction of an All-India index number should not be undertaken. The publication of a cost of living index number on a pie-wise

base for the working classes in Bombay City was started in the *Labour Gazette* from September 1921 and the scope and method of its compilation are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. The index number is based on what in January 1915 known as the aggregate expenditure method and includes in all 24 items representing food, fuel and lighting, clothing and rent. The table below gives the Bombay working class cost of living index numbers month by month from January 1915

Bombay working class cost of living index numbers by months
(July 1914=100).

The Labour Office conducted in the year 1926 an enquiry into working class budgets in Ahmedabad and the results of this enquiry have been used in the construction of a cost of living index for that centre. The Ahmedabad working class cost of living index number has been compiled on a post-war base and has been published in the *Labour Gazette* since January 1930. Items representing food, fuel and lighting, clothing, house-rent and miscellaneous groups have been included in the index. The following table gives the index numbers from August 1927 to November 1930 —

Ahmedabad working class cost of living index numbers by months
(Average prices from August 1926 to July 1927=100)

Months.	Index No	Month	Index No	Month	Index No
1927		1928—contd.		1929—contd	
August	101	October	97	December	95
September	101	November	97		
October	100	December	99	1930	
November	98	1929,

September	96	November	98	November	81

A cost of living index number based on the results of the enquiry into family budgets of cotton mill workers in Sholapur conducted by the Labour Office in 1926 is also under preparation. In the Central Provinces cost of living index numbers with January 1927 as the base have been prepared from January 1925 for the industrial workers at Nagpur and Jabalpur and published in the Department of Industrial Bulletin No 3.

Standard of Life—Very little information is available regarding the standard of living of the working classes in India. The most satisfactory method of obtaining this information is by means of a family budget enquiry in which information is collected regarding the composition income and expenditure of the family. To enable general conclusions to be drawn from investigations of this type it is always necessary to conduct the enquiries by what is known as the extensive method an attempt being made to secure the information from a large number of families so as to minimise the effect of the peculiarities of exceptional cases. The sampling method is often resorted to in conducting extensive family budget enquiries because of the impracticability of collecting data by the census method. It is essential that the sample should be representative in order to yield reliable results.

At the Third International Labour Conference of Labour Statisticians held at Geneva in October 1926, the Committee on family budgets passed a resolution that in order to provide adequate information with regard to actual standards of living, enquiries should be conducted generally at intervals of not more than ten years into the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. It was also decided that for a complete enquiry information should be collected as to the district in which the family resides, the composition of the household, the industries and occupations of members of the family, the nature of the housing accommodation and the amount of each important item of family income and expenditure together with quantities of purchases, where practicable. It

was agreed, however, that a less detailed investigation omitting the particulars of the family income would be sufficient where the sole object of the enquiry is to provide weights for the calculation of cost of living index numbers.

Family budgets were collected by the Labour Office for 3,076 working class families in Bombay City in 1921-22 and the report based on the results thereof was published in 1923. It has been decided to undertake a new family budget enquiry when industrial conditions become normal in Bombay City and to use weights based on the results of that enquiry in compiling a fresh cost of living index number for Bombay on a new base period. The Labour Office collected 985 budgets of working class families in Ahmedabad in 1926 and 1,133 budgets of cotton mill workers in Sholapur in 1925. The reports based on the results of these enquiries were published in 1928. A small family Budget investigation for cotton mill workers in Bombay city was also conducted by the Labour Office in 1930 but the results of this investigation have not been published so far.

In the United Provinces a number of budgets were collected at Cawnpore with the object of compiling a cost of living index number. But the results of the enquiry were not found to be satisfactory and the province has not been compiling any cost of living index number.

The Labour Statistics Bureau, Rangoon, which was established by the Government of Burma in 1926, has made an extensive enquiry into the Standard and cost of living of the working classes in Rangoon and the report based on 4,809 budgets was published in 1928. The results of this enquiry have been separately analysed for Burmese, Telugu, Tamil, Urdu, Hindustani, and Chittagongian workers. Separate index numbers for each of the different classes of workers have also been published at the end of the report. 1,002 budgets for the working class families in Nagpur and 507 budgets for working class families at Jabalpur were collected between September 1926 and January 1927 for compiling cost of living index numbers for these two centres.

TRADE UNIONS.

The history of trade unionism in India is a history of recent years. It was not until 1918 that labour had begun definitely to organise itself. Previous to that year very little effort appears to have been made to establish organisations of labour. The earliest association of workers in India was the Amalgamated Society of Railway Servants of India and Burma which had been registered under the Indian Companies Act and its main activities were in connection with the provision of various benefits to its members, such as Legal Defence, Sickness Insurance, Life Assurance, &c. After the Indian Trade Unions Act, 1926, came into force this Association registered under it as a Trade Union with the new name of the National Union of Railwaymen of India and Burma. The Bombay Postal Union, founded in 1907, mainly

for the clerical classes employed in the Bombay Post Offices, a Union of warpers in the Ahmedabad cotton mills formed in 1917, the Clerks' Union, Bombay, established in April 1918 in order to organise the various classes of clerical labour employed in commercial and other offices in Bombay city, and the Madras Labour Union formed in 1913 for the textile workers in the three mills in the city of Madras, were the main labour organisations in existence at the end of the year 1918. In addition, there existed certain benevolent social institutions such as the Kamgar Hitwardhak Sabha and the Social Service League, whose activities were directed towards the betterment of the condition of the working classes. But these Societies were not composed of workers themselves.

The year 1918 may be said to be a landmark in the history of the Indian Trade Union movement for from that year onwards there has been a more or less steady growth of trade unions despite the inevitable fluctuations in their prosperity. The economic circumstances of the time must be regarded as the dominant factor contributing to the establishment of trade unionism in India. As a result of the Great War the prices of all commodities, including the necessities of life soared high. This remarkable rise in prices was due partly to world factors and partly to factors peculiar to India. The intensive competition by belligerent countries for commodities of all kinds the diversion of huge numbers of those formerly engaged in production to the Army and supply services, and the creation of a huge additional volume of credit and currency to finance the war reacted on India with the following two main results: (1) the demand for her products was increased, and consequently industries flourished making huge profits, and (2) labour was in greater demand than ever before. The unprecedented rise in prices coupled with the comparatively slow movement of the level of wages tended to reduce the real value of the workers' income. The general economic unrest that followed the Armistice affected the Indian labourer also who like his prototype elsewhere began to demand from his employer more wages, better housing conditions more leisure and increased opportunities for bettering himself. A period of industrial strife followed and a few strikes were quickly successful. These successes taught the labourers in India, as nothing else could the efficiency of organisation. Indeed, to many workmen, concerted action in the nature of strikes, attended by rapid and unvarying successes seemed almost infallible. This was the period during which a-tive trade unionism in India may be considered to have begun. In the two years following 1918, the epidemic of industrial strife assumed serious proportions and reached a climax towards the close of the year 1920. The number of labour unions also increased very rapidly and unions were formed of workers in all possible industries and occupations. Most of these Unions were however, merely Strike Committees brought into existence either before or after particular strikes in order either to engineer or to conduct them. These Committees were either dissolved as soon as their purpose was served or remained dormant until another strike in the trade broke out. Most of the remaining Unions formed during the period 1918-20 were unstable and nearly 75 per cent of them died an early death in the following year. There was a definite check to the progress of the trade union movement in India during the next two or three years. But although individual Unions collapsed as rapidly as they were formed the movement itself showed signs of permanence and vitality.

Obstacles to rapid growth.—The difficulties in the way of organising permanent trade unions in India were almost insuperable. Most of the earlier Unions had no regular constitution or a definite basis of revenue, no system of auditing or publishing accounts and no funds for providing help to women and children in times of distress. The membership of the Unions became effective when the workers possessed definite and real grievances and parti-

cularly when there was a marked gap between nominal wages and the cost of living. But when the economic stringency passed away, the bond which united the workers constituting all but the few really well organised Unions, tended generally to weaken.

Further labour in India is still migratory. The average Indian labourer who is an agriculturist by tradition is domiciled in a locality remote from that in which he works. His love of home makes him return constantly to his native village only to retrace his steps to the industrial centre as soon as he feels the pinch of want. During his absence away at his home, he does not feel inclined to continue his membership of any trade union with which he might have been associated. The want of a steady working class population was thus an important factor which stood in the way of the growth of the movement. The difficulties arising out of the widely differing social customs of the several castes and creeds that make up the Indian labouring classes were also contributing factors militating against the progress of trade unionism in India. Ignorance and illiteracy were and still are to a large extent, serious obstacles in the way of labour organising itself. The general poverty of the working classes is yet another factor to be reckoned with. Many labourers disliked the idea of regular contributions and were not amenable to Union discipline, with the result that a Union could rarely embrace more than a small percentage of the men employed in any establishment. The authority which could be exercised by the smaller Unions over the men as a whole, was consequently very restricted. The paradox of Trade Unionism in India was that the persons who most needed organisation were those who were unable, on account of their poverty and ignorance, to combine.

Notwithstanding the reasons given above, perhaps the most important factor which retarded the growth in the movement immediately following the successes which met the earlier formations or Strike Committees which they really were, was the definitely hostile attitude of the employers to all combinations of their employees. It was not until the passage of the Indian Trade Unions Act which made it morally obligatory on employers to recognise those Unions of their employees which had registered under the Act, that a change in the attitude of violence was noticeable.

Measure of leadership.—The Indian Trade Union movement, in its early beginnings, was essentially an economic one, and to regard labour unions as being engineered solely by politicians as the result of their propaganda is to misread the origin of this movement. The Indian workman is predominantly illiterate and has even now few leaders from his own class to whom he can turn for guidance. In consequence trade unions in India have been led by middle class men especially professional lawyers and others, who have not perhaps in all cases made a distinction between economic and political considerations. In the words of Mr A. B. Burnett-Hurst, social workers did not take the initiative but "allowed the lawyer politician class to capture and control these bodies." Many of the so-called leaders of Indian Labour who were drawn from the lawyer-politician

class often exploited the ignorance and credulity of the labour force for their own material advantage, or for the propagation of their pet political doctrine, in addition to looking after the welfare of the labourers. There were, however, several notable exceptions. Leaders like Mr N M Joshi, Dewan Chaman Lal, the Rev O F Andrews, Mr M K Gandhi, Mr V V Giri, Mr B Shiva Rao and Miss Ananya Sababhai endeavoured to create Unions for the benefit of the workers and for the general improvement in the conditions of life and work of the labouring classes. During the last two years however the principles of communism have been disseminated amongst the masses of India by the members of the Workers and Peasants Party which is an agent in India of the Communist International. The Communist agents took advantage of the economic unrest prevalent in the country early in the year 1938 and usurped the leadership of the working classes within a short period of time and were able to assume control over the executive of the principal textile and railway unions in Bombay, Madras and Bengal. The Communists captivated the minds of the workers by painting the existing conditions as black as possible and contrasting them with a supreme state of wealth and happiness which is promised under the regime of a dictatorship of a workers proletariat. The discontentment amongst the workers over conditions of work has been aggravated by the incessant preachings of revolutionary doctrines. The credulity of the Indian labourer has been of great advantage to these emissaries of revolution in creating in him a deep hatred against the employers and also instilling in his mind an abhorrence for the Government established by law in the country. These agitators, occupying positions of vantage, have instigated disastrous strikes in pursuance of purely political ends often with a callous disregard of the subsequent sufferings and losses inflicted on their ignorant and hapless dupes. The hold which the Communists have over the labour movement in India to-day shows no signs of abatement. The sanity and sobriety of moderate leadership have no great attraction for the large majority of the labourers. The moderate leaders have, however, been fighting their battles for leadership with the extremist revolutionaries, and were for a time successful in keeping the latter under control. At the

moment of writing, it has become impossible for the moderates and the avowed Communists to work shoulder to shoulder in the labour movement, and a split has occurred between the two, the Unions standing for constitutional progress rallying under the banner of the Moderates while those in favour of Communist principles accepting the leadership of the Red Flag Organisations.

Progress of Trade Unions since 1918.—The trade union movement spread to various industries and occupations in India during the years following the Armistice, but a number of them passed out of existence very soon after they were started. The more stable Unions were of clerks, railway workers, postal employees and seamen. The peculiar feature of the trade union movement in India is that it did not in the early stages of its progress make much headway in the more important manufacturing industries and this constituted a weak point in the movement. Whereas in other countries, the clerical employees organised themselves on the model of the industrial workers long after the latter had well organised themselves in strong Unions, in India the former have come up if not first, at least simultaneously with industrial unions and have established themselves more permanently.

The following figures illustrate the growth of Trade Unions in the Bombay Presidency.—

Year	No of Unions	No of Members
1922	22	51,472
1923	19	40,087
1924	36	52,227
1925	38	40,318
1926	56	74,875
1927	72	87,340
1928	94	108,072
1929	99	194,748
1930	98	119,791

The distribution of the membership as at 1st September 1930 by classes of industries is as follows.—

Class of Industry	No of Unions	Membership	Percentage of membership to total
Textiles	11	24,695	20.6
Railways (including railway workshops)	15	20,233	32.7
Seamen	3	20,206	25.3
Post and Telegraphs	31	8,815	7.4
Municipal	7	2,823	2.4
Miscellaneous	26	12,991	11.9
Total	98	119,791	100.0

There are in addition two federations of Postal Unions, one of Railway Employees Unions and a fourth which is a Central Union governing a number of individual Unions of textile workers in Ahmedabad. (For the constitution, membership and other particulars regarding these organisations, reference may be made to the issue of the Bombay Labour Gazette). The Central Labour Board and the Bombay Trades Council which had been included in the list of Federations in the Bombay Presidency are now defunct.

The Punjab has no heavy concentration of industrial labour and consequently the extent of organisation among both employers and employed is up to the present little. There is, however, a vague striving among the employed towards co-operation and combination especially for the purpose of demanding better remuneration and considering the question of resorting to direct action for enforcing their demands on their employers. No Communist influence has been noticeable in the Punjab where industrial disputes have been stated to have occurred as a result of the normal antagonism between employers and employed. The only large employers of labour in the Punjab are the N.W. Railway Administration, and four out of the 16 registered Unions are of the employees of the various departments of the N.W. Railway and cover, in all, 5,436 members.

In the United Provinces the number of Associations of workers is rather small, compared to its industrial importance. There are in all about 6 Unions, all of recent growth. Some of the Associations formed during the general upheaval following the War and especially during the days of Non-Co-operation have since died or become moribund. Organised labour forms a very small proportion of the total Organisation of labour outside Cawnpore is almost non-existent and even in Cawnpore only about 10 per cent of the labour is organised. There has been a growing interest of labour in trade unionism which appears to have the prospect of a rapid development in the future.

The Central Provinces and Berar have six trade unions and four branches of outside organisations. The classes of workers who have been embraced by the Trade movement in this part of India are (1) Textile workers, (2) Press employees, (3) Scavengers, (4) Motor drivers, (5) Railway workers, (6) Postal employees and (7) Clerks. Trade unionism is stated to be yet in its infancy in this Province and the Labour Unions appear to have done little to improve the conditions under which their members work.

The trade union movement in Madras received a setback in 1921-22 as a result of the failure of the strikes in the Buckingham and Carnatic mills. During the year 1922-23 most of the Unions were dormant and the only Union which showed signs of activity was the M. and S. M. Railway Workshop Employees' Union, Porembur. The trade union activities were revived in 1923-24 and the following Unions became once more active—(1) The Madras Labour Union (2) The Madras Tramwaymen's Union, (3) The Corporation Scavengers Union, (4) the S. I. Railway Employees Union and (5) the Coimbatore Labour Union. The Madras Harbour Port Trust Workmen's Union was revived in 1925-26. A section of the workmen of the Buckingham and Carnatic mills organised a separate Union in 1925-26 called the Buckingham and Carnatic Mills Employees Union, as a rival to the Madras Labour Union which is an old organisation in the same industry. The Cordite Factory Labour Union, Aruvankudus came into prominence during 1926-27. Unions were newly formed for the employees of the Public Works Department workshops and the Government Central Press, Madras, while the Diocesan Press Employees Union which had remained dormant was revived. The labourers working in the cotton ginning and pressing factories in Trappur, Coimbatore District started a Union for their benefit. Most of the Unions included in their programme a demand for separate representation for Labour in the Legislative Council. The OM Workers Union and certain other Unions came into prominence only when there was an impending labour dispute.

RAILWAYS.

There are four Railway Associations of an All-India character with the following membership—

	Membership
The All India Railwaymen's Federation	100,000
The Anglo Indian and Domiciled European Association (This is not a Trade Union)	10,000
The All India and Burma Covenant-ed Non-Gazetted Railway Servics Association	265
The National Union of Railwaymen of India and Burma	2,000

In addition there are over 20 individual Unions distributed over the principal Railways in India. The following nine Unions on the principal Railways have each a membership of about 2,000 and over—

Name of Railway	Name of Union	Membership.
N. W. Railway	(1) The N. W. Railway Union Lahore	5,000
	(2) The General Workers Union, Lahore	8,500
E. B. Railway	(3) The Eastern-Bengal Railway Indian Employees Association, Calcutta	11,167
E. N. Railway	(4) The Bengal-Nagpur Railway Indian Labour Union.	14,000

Name of Railway	Name of Union	Membership
M & S M Railway	(5) The Madras and Southern Mahratta Railway Employees Union, Perambur	8,800
G I P Railway*	(6) The G I P Railway Staff Union Bombay	2,949
	(7) The G I P Railwaymen's Union, Bombay	22,000
B B & C I Railwaymen*	(8) The B B & C I Railway Employees Association Ahmedabad	4,453
	(9) The B B & C I Railway Employees Union, Bombay	6,813

* As at 1st September 1930

The main characteristics of the trade unions of Railway employees are that (1) they embrace in one Union all the varied classes of railway employees, (2) several of them are connected with workshop employees who by reason of their concentration in one place afford the best field for organisation (3) the leaders are often of the lawyer class (4) the membership increases during times of unrest and decreases at other times, and, (5) the funds of the Unions are consequently uncertain. Communist agitators have worked their way into the executives of some of the more important trade unions of railway employees especially on the G I P, E I and S I Railways. In the case of these Railways they

have pursued their revolutionary policy and instigated the workers to go on strikes which were at once disastrous to the public, the railway administration and to the workers. Unions conducted on sound trade union principles are encouraged by the Railway authorities who are also disposed to recognise Unions which are registered under the Indian Trade Unions Act. Representations and deputations from recognised Unions are received and sympathetically treated by the authorities. Freedom of action is granted to the Unions for the enrolment of members and collection of subscriptions so long as there is no interference with the duties of the railway staff.

ALL INDIA LABOUR ASSOCIATIONS.

The All-India Railwaymen's Federation.—Twelve Unions of Railway workers are affiliated to it and its total membership amounts to nearly 1,00,000. It is growing in influence and popularity and in May 1929 a deputation waited on Sir George Rains, the Railway Member of the Government of India, to discuss the grievances of railway employees in general. No less than 25 subjects were included for discussion but the more important of them related to wages and the position of daily-rated men, hours of work and the weekly rest, insecurity of service and appeals, medical facilities, fines, extension of provident fund benefits and quarters. The Railway Board have indicated enquiries with a view to taking the necessary action in the matter.

The National Union of Railwaymen of India and Burma was started by the Amalgamated Society of Railway Servants of India and Burma which came into existence as a sequel to the Great Indian Peninsula Railway Guards' strike in 1897. It was at first registered under the Indian Companies Act, but after the Indian Trade Unions Act came into being it altered its name, re-drafted its constitution and registered as a Trade Union. It has a membership of over 2,000 employees.

The All-India and Burmah Covenanted Non-Registered Railway Services Association.—This Association, whose membership is limited to covenanted Europeans employed as foremen in railway workshops in India was started in October 1928 with the object of securing for its members the benefits of the Lee Commission's recommendations. It submitted a memorial to the Viceroy on this question in

November 1929. It has a membership of about 300 employees scattered all over India and has its Head Office in Bombay. The Association registered with the Registrar of Trade Unions Bombay Presidency, in March 1928.

The All-India Trade Union Congress.—This organisation was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual Labour Unions in India which till then remained inchoate and were unable to take concerted action and (2) to recommend workers delegates to the International Labour Conferences. When the Government of India had to select a Labour representative to attend the Washington Conference in 1919 there was no representative body of labour in India to be consulted and they therefore appointed Mr. N. M. Joshi as the Workers' Delegate. In order therefore that responsible Labour opinion in India might have a voice in the selection of the delegates to the International Labour Conferences, the All India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920. Eight hundred delegates from different parts of India were present and sixty Unions were affiliated and 43 others expressed their sympathy with the Congress. It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour. Its presidents and secretaries have all been politicians, first and labour leaders next, with the exception of a few persons like Mr. N. M. Joshi. The Congress appointed itself a permanent body to meet once a year. It has a definite constitution, an elected

Executive to carry on its work, and Provincial Councils which, under the Executive are responsible for co-ordinating the work in the respective provinces. The main object of the Congress is to co-ordinate the activities of all the labour organisations in all the provinces in India and generally to further the interests of Indian labour in matters economic, social and political. It may also co-operate and federate with organisations of labour having similar objects in any part of the world.

Every organisations of labour in India is entitled to be affiliated to the Congress on the following conditions —

- (a) That the Union seeking affiliation shall pay to the All India Trade Union Congress an annual contribution on the basis of Rs 10 for every 1,000 members or part thereof
- (b) That the Union seeking affiliation shall pay to the All India Trade Union Congress the amount of a special levy of a contribution approved of by a majority of two-thirds of the members of the Executive Council in the same proportion as (a).
- (c) That the Union seeking affiliation shall agree not to act in any manner prejudicial to the collective interests of the All India Trade Union Congress
- (d) That the applications for affiliation shall be forwarded through the Provincial Committee to the General Secretary, with the decisions arrived at by it but no application for affiliation shall be withheld by the Provincial Committee
- (e) That no Union shall be affiliated to the Congress without being first affiliated to the Provincial Committee. That no Union shall be affiliated which has not been in existence at least for one year and has not had its accounts and statement of paying members audited by a qualified auditor or an authorised representative of the All India Trade Union Congress.

The Executive Council of the Congress consists of a Chairman, the Vice-Chairman or Vice-Chairmen, the Treasurer, the General Secretary or General Secretaries, the Secretary or Secretaries and the Assistant Secretary or Assistant Secretaries as ex-officio members and not more than ten additional members including the ex Presidents of the All India Trade Union Congress, elected at the annual session of the Congress and the representatives elected by the affiliated unions on the following basis —

- 1 Representative for unions with a membership upto 1,000
- 2 Representatives for unions with a membership between 1,000 and 3,000.
- 3 Representatives for unions with a membership between 4,000 and 5,000
- 4 Representatives for unions with a membership above 5,000

The individual Unions affiliated to the Congress are conceded full autonomy with regard to the management of their own affairs according to their rules.

The second Session of the Congress was held in 1921 at Jharia under the Presidency of Mr Joseph Bapista. The third session was held at Lahore in 1923 with Mr C. R. Das as President. The fourth Session held at Calcutta in 1924 was also presided over by Mr C. R. Das. Out of the 43 resolutions passed at this Session some dealt with the recruitment of Seamen and their eligibility for securing compensation under the Workmen's Compensation Act. The fifth session was held in Bombay in 1925 with Mr Dhundiraj R. Thengdi of Nagpur in the chair. Mr V. V. Giri of Bechampur was the President of the Sixth Session held in Madras in 1926. Delhi was the centre where the Seventh conference of the Congress was held in 1927 and the President was Rai Sahab Chandrika Prasad Dewan Chama. An Lal M. L. A. was the President of the Calcutta Session of the Congress held in 1927. The ninth session was held in 1928 at Jharia with Mr M. Dand in the chair. It is significant that at this Conference Pandit Jawaharlal Nehru moved a resolution protesting against imperialism.

The tenth assembly of the Trade Union Congress which met at Nagpur in 1929 under the presidency of Pandit Jawaharlal Nehru will remain as the most important landmark in the history of organised labour in India. It marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by Communist Agents in India resulting in a split between the genuine trade union leadership on the one hand and the votaries of communism on the other. The fundamental issue upon which the split in the Trade Union movement occurred was whether the labour movement in India shall be inspired and conducted for the betterment of the industrial workers or whether it shall be utilised as a means to promote and bring about revolution in the country. The proceedings at the Session made it impossible for the rival forces to carry on any longer under a common organisation. The reasons contributing to the ultimate split were as follows — The Bombay Girni Kamgar Union and the G. I. P. Railwaymen's Union applied for affiliation the former with a membership figure of 54,000 and the latter 45,000. The Bombay Girni Kamgar Union could produce no audited documents as required. However it was admitted a member on the basis of a membership of 49,000. The G. I. P. Railwaymen's Union was affiliated on a strength of 80,000 members. This meant that a large part of the voting power was vested in the representatives of these two Unions which were of communist persuasion. The Executive of the Congress was also captured by the revolutionaries, and resolutions for the boycott of the Royal Commission on Indian Labour, affiliation of the Congress to the League Against Imperialism, the appointment of the Workers Welfare League, a Communist organisation in England as Agents of the Congress for Great Britain and the boycott of the International Labour Conference at Geneva were passed both by the Executive Committee and the open session of the Congress.

The moderate leaders of labour, including Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, B. B. Bhattacharya and Dewan Chaman Lal seceded from the Congress and set up a separate federation under the name of the "All-India Trades Union Federation" in order to co-ordinate the activities of non-communist Trade Unions in India. Endeavours made to draw the seceders back into the fold of the All India Trade Union Congress have not met with any success. The Labour Unions in Ahmedabad which draw their inspiration chiefly from Mr. M. K. Gandhi have not during the ten years of the Trade Union movement in India shown any desire to become affiliated to the Congress.

The Trade Union Congress in 1925 brought out a Directory of Trade Unions in India which is the book of reference for those interested in Indian Trade Unionism. The utility of this publication will be by far enhanced, if the Central organisation makes it a point to bring the Directory up to date each year. The Congress also started publishing from 1924 a bulletin called the All-India Trade Union Bulletin which contained notes on vital questions concerning the trade union movement in India. Since the Nagpur split the All-India Trade Unions Federation has been publishing a new journal entitled the *Trade Union Record*.

Trade Union Legislation

Article 427 of the Peace Treaty (to which India was a signatory) defines certain methods and principles relating to Labour. The second of these principles lays down the right of Association for all lawful purposes by the employed as well as by the employers. This right could not be exercised by Trade Unions in India where it came into conflict with the laws of the land in regard to agreements in restraint of trade, tortuous acts and criminal conspiracy. This drawback was well brought out in consequence of a suit which arose out of a trade dispute in Madras. In 1920 a Company owning a mill whose workmen were on strike brought a suit against the leader of the local labour union which was conducting the strike and others seeking to restrain them from inducing the plaintiff's workmen to break their contracts, and suing for damages for their actions in this respect. The Madras High Court to whom the suit was referred gave their decision granting an *interim* injunction restraining the defendants from inciting the plaintiff's employees to continue the strike. The case was eventually withdrawn but the proceedings suggested that, in the absence of legislation, even legitimate trade union activity was attended by considerable peril. As a result of a resolution moved by Mr. N. M. Joshi and accepted by the Legislative Assembly in March 1921, Government were committed to take steps as soon as practicable to introduce such legislation as might be necessary for the registration and protection of Trade Unions. The Government of India, accordingly, formulated certain tentative proposals and circulated them for eliciting public opinion. The opinions expressed were by no means unanimous—some considered the proposed legislation premature, while some others

realised that legislation was necessary but at the same time considered Trade Unions as a pernicious and dangerous growth which should be rigidly controlled, and others again urged that sufficient protection should be granted to them. In August 1921, the Government of India circulated a draft Bill for opinion. The Bill conferred certain privileges only on registered Trade Unions and left the question of registration at the option of Trade Unions themselves. Provision was also made to ensure that the funds of a registered Trade Union are not expended on causes in which the bulk of the members have little interest. A regular audit of the funds was proposed to be made compulsory and the manner in which the executive should be composed was also provided for.

A number of amendments were made by the Select Committee and in the Legislative Assembly. A clause permitting registered Trade Unions to maintain funds for political purposes was added. The provision was on the model of the British Law on the subject and those members who contracted out of the liability to subscribe should not be compelled to contribute to the Political Fund nor would failure to contribute involve any disability or disadvantage except in so far as the control and management of the Political Fund was concerned. The Bill was passed on the 8th February and received the assent of the Governor-General on the 25th March 1926. It came into effect from the 1st June 1927.

Mr. N. M. Joshi introduced in the Legislative Assembly on the 8th February 1926, a Bill to amend Section 43 of the Indian Penal Code in order to extend to the officers and members of unregistered Trade Unions the protection afforded by Section 17 of the Indian Trade Unions Act, 1926, which lays down that no officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120B of the Indian Penal Code, in respect of any agreement made between the members for the purposes of furthering any such object of the Trade Union as is specified in Section 15, unless the agreement is an agreement to commit an offence. The Assembly, however, threw out the Bill.

A Bill was introduced in the Legislative Assembly on the 8th September 1926 with a view to amending Section 11 of the Indian Trade Unions Act, 1926. It was pointed out in the Statement of Objects and Reasons that the existing section 11 of the Act admitted of doubt in two respects namely (1) It did not indicate clearly whether the first appeal lay to the judge appointed for the area within which the Registrar's office is situated or to the judge appointed for the area within which the head office of the trade union is situated. The amendment is intended to make it clear that the latter is the competent court. (2) It did not indicate clearly what judge might be appointed to hear appeals in the Presidency towns and in Bangalore. The amendment is designed to make it clear that in such areas the appeal lies to the High Court and there is no second appeal. The opportunity has also been taken to define clearly the powers of the High Court in second appeals.

The Bill was passed and received the assent of the Governor-General on 25th September 1928

Working of the Act.—The Act has now been in operation for more than 2½ years. Full information regarding the total number of

Unions registered in all Provinces in India is not available. The following table however, shows the number of Unions registered and the character of the membership as at 1st April 1930 for those provinces for which information is available

	Total No of Unions registered	Membership of registered Trade Unions		
		Male	Female	Total
Bombay *	40			70,173
Bengal	9	37,455	190	37,645
Burma	1	148		148
Central Provinces and Berar	3	1,914	600	2,514
Madras	10	16,393	220	16,613
N W F Provinces	1	2,180	4	2,184
Punjab				
United Provinces	4†	8,518		8,518

* The figures are for 1st September 1930 † Two Unions did not furnish figures for membership

No association of employers has yet applied for registration. No Trade Union was registered in the provinces of Assam, Ajmer-Merwara, Baluchistan, Coorg and Delhi up to the end of March 1930. The great inducement to register has been the predisposition of employers generally to recognise Unions that are registered. In the case of Associations of Government Servants one of the conditions of their recognition by Government was that they should get themselves registered when the Trade Unions Act was

brought into force. In view of the fact however, that certain difficulties have arisen in connexion with the application of the Act to Government servants the question is under the consideration of the Government of India who have not yet formulated any definite conclusions. Pending the consideration of this question Government have relaxed the provision contained in the existing rules for the recognition of Associations of Government servants which requires them to register under the Act.

INDUSTRIAL DISPUTES.

The weapon of the strike in industry first came into prominence in India during the period immediately following the close of the War when the majority of the strikes as shown in the Introductory Section were designed to secure increases in wages commensurate with the rise in the cost of living. The epidemic of industrial strikes which characterised the period 1919-20 reached a climax in the winter of 1921. During this period strikes took place purely from economic causes and most of them ended successfully from the view point of the workers, after a short struggle. After this period, however they tended to be more prolonged and less successful and, partly owing to political causes, there were a number of fairly serious disputes in public utility services. In more recent years the machinations of the Communists have been increasingly responsible for the calling of general strikes and their undue prolongation.

Certain characteristics common to most of the strikes in India, in the words of the Industrial Disputes Committee appointed by the Government of Bombay in 1924, are—

- The frequency of the strike without notice,
- The absence of any clearly-defined grievance before striking,
- The multiplicity and sometimes the extravagance of the claims put forward after the strike has begun,
- The absence of any effective organisation to formulate the claims of the operatives and to secure respect for any settlement which may be made,
- The increasing solidarity of employers and employed and the capacity of the operatives to remain on strike for considerable periods despite the lack of any viable organisation.

Extent of Disputes.—All-India statistics of industrial disputes for each quarter and for each year have been compiled and published since 1920 by the Government of India in the Department of Industries and Labour.

The following tables show the number of disputes which occurred during the six years 1924-29 in each province and in each class of industry respectively —

Provinces,	No of disputes in					
	1924	1925	1926	1927	1928	1929
Bengal	55	43	57	34*	60	35
Bombay	51	69	57	54	111	70
Madras	16	4	2	19*	7	12
Central Provinces & Berar	3	6	4	2	1	2
United Provinces	4	6	3	3	2	4
Bihar & Orissa	1	2	3	4*	8	2
Burma	3	3	1	3	7	4
Punjab		1			2	
Assam			1	12	5	9
Total	133	134	128	129	203	141†

* One strike extended to three provinces.

† Includes 3 disputes in Delhi

Industries.	No of disputes in					
	1924	1925	1926	1927	1928	1929
Cotton and woollen mills	55	69	57	60	110	78
Jute Mills	20	15	33	11	19	13
Engineering Workshops	8	7	4	8	11	7
Railways including Workshops	4	6	3	3	9	4
Others	46	37	31	49	54	39
Total	133	134	128	129	203	141

The peak in respect of the number of industrial disputes (368) was reached in the year 1928. More than 50 per cent. of these disputes occurred in the Bombay Presidency while only about 30 per cent. occurred in Bengal. In none of the

other provinces was there an average of at least one dispute per month during that year. The industry which was hit hardest was the cotton and woollen mill industry in which no less than 118 disputes took place during the year.

CONCILIATION AND ARBITRATION MACHINERY

Prior to the passing of the Trade Disputes Act as an all India measure early in the year 1929 there was, with the exception of a conciliation panel in Bengal, which will be dealt with lower down, no official machinery for conciliation and arbitration in industrial disputes in India. The Employers' and Workmen's (Disputes) Act which was passed in 1860 to make provision for the speedy termination of certain disputes between workmen engaged in railway and other public works and their employers and which was extended, in case of the Bombay Presidency, to the districts of Ahmednagar, Broach, Ahmedabad, Kaira, Poona, Sholapur, Surat and Thana in 1866 and 1861 and to Sind in 1873 deals with individuals and does not provide any machinery for the settlement of disputes in other trades or industries. No records are available to show the extent to which this Act has been made use of in India. The only provinces in which ad hoc Committees have been appointed during the previous ten years either in require

into the question of providing machinery for the settlement of disputes or to deal with specific strikes are the Bengal and the Bombay Presidencies.

Bombay Presidency.—The first Committee to be appointed in the Bombay Presidency was the Industrial Disputes Committee appointed on the 18th November 1921 with Sir Stanley Reed as Chairman to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes. This Committee made several recommendations with regard to the standardization of wages, trade unions, the attitude employers should adopt towards Unions of their workers and the recognition of such Unions, Works Committees, Welfare Work, Co-operative Societies, Housing of Labour, etc. Their recommendations were in the nature of measures that might contribute to the prevention of industrial disputes. With regard to the

methods of settlement when such disputes either develop irreconcilable differences between capital and labour or else become a menace to the community, the Committee recommended the formation of an Industrial Court of Enquiry to be followed, if necessary, by an Industrial Court of Conciliation. They were of the opinion that no outside agency and in particular the agency of the State should be used until all other means had been employed and failed or unless it was invited by one or other of the parties to the dispute or unless the situation was such that peace order and good government were prejudiced. The placing of the function of enquiry first and separate from the role of conciliation was done deliberately in order to avoid too facile opportunism which seeks to patch up an industrial dispute by proposing a compromise between the views of the two parties without going down to the economic principles which are at stake. The Committee appended to its Report a draft for a Bombay Industrial Courts Act.

In pursuance of the recommendations made by the Industrial Disputes Committee the Government of Bombay published a Bill to provide for enquiry into and settlement of trade disputes in the *Bombay Government Gazette* in May 1924. It was intended to introduce the Bill in the Bombay Legislative Council at the Poona session in July of the same year but, in the meanwhile the Government of India asked the Local Government not to proceed with this measure because they themselves intended to introduce similar legislation for the whole of India. This, however, was not the first occasion on which the Government of India considered the question of the advisability of introducing legislation to provide for the settlement of disputes. In 1923 they circulated all Local Governments asking their opinions as to the advisability of providing legislation on the lines of the Industrial Courts Act 1919. The opinions obtained by provincial Governments were almost unanimous that labour was not properly organised and that therefore no useful purpose would be served by such legislation. The majority of the provincial Governments adopted the same view.

Bombay Dispute Enquiry Committee.—The next Committee to be appointed by the Government of Bombay was the Committee of Enquiry with Sir Norman Macleod as Chairman to enquire into the general strike of the Bombay cotton mill workers of the year 1924 in connection with the non payment of an annual bonus for the year 1923 by the Bombay mills. The terms of reference were —

- (1) to consider the nature and basis of the bonus which was granted to the employees in the cotton mills of Bombay since 1919 and to declare whether the employees had established any enforceable claim, customary, legal or equitable, and
- (2) to enquire into the profits made in each year since 1917 with a view to comparing these profits with the profits made in the year 1923, and to report on the contention of the millowners that the grant of a bonus

such as was given in previous years was not justified by the profits of the mill industry as a whole in 1923

The findings of the Committee on these points were —

- (1) That the mill workers had not established any enforceable claim, customary legal, or equitable to the annual payment of a bonus, and
- (2) that the results of the working of the mill industry as a whole for the year 1923 were such as to justify the contention of the millowners that the profits did not admit of the payment of a bonus.

Bombay Strike Enquiry Committee.—The third ad hoc Committee to be appointed in the Bombay Presidency was the Bombay Enquiry Committee under the Chairmanship of Sir Charles Fawcett Judge of the Bombay High Court in connection with the general strike of the cotton mill workers in Bombay (City) of the year 1928 in pursuance of the agreement arrived at between the *Bombay Millowners Association* and the *Joint Strike Committee* at a conference held under the Chairmanship of the Hon Sir Ghulam Hussain Eddayatullah General Member of the Government of Bombay on the 4th October 1928. The terms of reference to the Committee were —

- (a) whether the amended scheme of a standardised schedule of rates and of a standardised muster prepared by the *Millowners Association* and also the scheme prepared by the *Joint Strike Committee* was fair and reasonable
- (b) whether the Seventeen Demands advanced by the *Joint Strike Committee* were fair and reasonable and to what extent, if any, they should be met and
- (c) whether the Standing Orders as amended and presented by the *Millowners Association* on the 4th October 1928 were fair and reasonable

This Committee sat for a continuous period of five and a half months and its Report was published on the 26th March 1929.

The main conclusions and recommendations of the Bombay Strike Enquiry Committee were as follows —

- (1) The proposals of the *Millowners Association* (a) for standardisation of wages, duties and numbers of operatives in a mill and (b) for Standing Orders for the operatives about the conditions of their employment were in the main fair and reasonable
- (2) While there was justification for the Association's proposal to make a cut of 7½ per cent in weavers wages, that were reasonable objections to be urged against its adoption in the present circumstances, and it was recommended that it should be dropped by the Association provided the Labour leaders undertook to co-operate in working the scheme for the standardisation of wages.
- (3) That part of the standardisation scheme which is called the 'Rational' or 'Efficiency' system and which aims at

reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable.

- (4) Although the principle at the back of the standardised Standing Orders was considered to be fair and reasonable, it was recommended that alterations should be made in the proposed rules in connexion with the following matters —

- (a) The finality of the order of a Manager or the Managing Agents should be without prejudice to any right of an operative affected by his or their decision to resort to legal proceedings in a court of law.
- (b) The Standing Orders should not be altered without the previous consultation of, and consideration of objections by, the operatives or their representatives.
- (c) A rule should be added about granting leave.
- (d) A rule should be inserted as to the method of calculating wages.
- (e) The right to play off for trade purposes should be restricted to a period of two days at a time.
- (f) An operative who is played off for a period longer than a week may be permitted to leave the Company's service on intimation of his intention without further notice.
- (g) A rule should be added entitling an operative to compensation for detention in a mill for over an hour in the event of stoppage of work owing to breakdown of machinery etc.
- (h) The period of notice for the termination of employment should be reduced to fourteen days.
- (i) A rule should be added as to the payment of unclaimed wages.

With regard to some other important matters raised from the discussions of the Standing Orders the Committee found as follows —

- (a) As to the advisability of an extra morning recess they agreed with the Tariff Board as to its advisability and suggested that it should be tried as an experiment in suitable mills with a reduction of the working hours to 9½.
- (b) As to exempting weavers from taking out and presenting Attendance tickets it was held that there was no sufficient reason to exempt them.
- (c) As to the liability of operatives to be searched it was held that this was reasonable.
- (d) As to payment of wages being made earlier than at present, it was recommended that an attempt should be made to pay them by the 10th of each month.

- (e) As to the legality and fairness of playing off, it was held that there is no objection to this in the case of stoppages due to causes for which the employer is not responsible, but that it should be restricted to a period not exceeding two days at a time in the case of playing off for trade purposes.

- (f) As to the legality and fairness of forfeiture of wages for leaving without due notice the question was answered in the affirmative.

- (g) As to the legality of operatives striking work without notice or inciting others to do so it was held that this could rightly be treated as misconduct rendering an operative liable to dismissal.

- (h) As to the proposed abolition of fines, the proposal was rejected pending the decision of the Indian Legislature on the subject on the Bill proposed to be framed in this matter by the Government of India.

- (i) As to the compulsory purchase by weavers of spilt cloth, it was held that its compulsory purchase is objectionable and a rule was suggested on the subject to restrict this present practice within reasonable limits.

- (6) With regard to the Seventeen Demands submitted by the Joint Strike Committee the following demands were considered to be fair and reasonable—

- (a) That the Millowners shall not vary any of the present conditions to the disadvantage of the workers before securing the approval of the workers through their organisations.
- (b) That the Millowners Association shall not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association.
- (c) The rates of new varieties shall be fixed by the Millowners Association in consultation with the representatives of the Workers organisations.
- (d) Notices in vernacular showing the rates of piece work in detail should be posted in the Departments for the information of the workers.
- (e) The rules regarding the forfeiture of wages remaining unclaimed for certain periods should be done away with.
- (f) The conditions of employment, work and payment should be standardised.
- (g) The present high piece allowances should be consolidated with the original wages.
- (h) One month's notice must be given by either side before terminating the contract of service, (As a result of mutual agreement between the

- parties, the period of notice was reduced during the discussions before the Committee to fourteen days)
- (f) The Millowners' Association should make standard rules for the guidance of its members regarding the grant of leave to their employees
- (g) All the rules that are usually posted in the mills or departments should be standardised by the Millowners Association so that they shall be uniform in all the mills.
- (h) That none of these rules or regulations shall be such as may deprive the workers of their rights conferred on them by the existing law
- (i) Employment in the Weaving Department of the mills should be opened to the members of the so called "Depressed Classes"
- (m) That there should be no victimisation of men who had taken part in the strike or any Union activities
- All the above except (g) and (h) were eventually conceded by the Millowners Association
- (7) The following demands were held to be unfair and unreasonable—
- (a) The wages of those workers whose average monthly wage is less than Rs 30 should be raised substantially
- (b) The newly introduced system of compelling the workmen (1) to take out and present tickets of attendance and (2) to clean the machinery daily should be discontinued
- (8) The following demands were held to be partly fair and reasonable and partly not—
- (a) The present practices resorted to by some millowners which result in the reduction of wages should be stopped and reductions and altered conditions already effected since 1920 should be restored
- (b) That where the daily hours of work of any class of workers were less than ten the hours should not be raised to ten without the consent of the workers concerned expressed through their organisations. When the hours are thus increased the workmen should be paid for the same at the usual overtime rates.
- (c) The system by which each worker is required to look after three looms or the whole spinning frame (two sides) should not be introduced or continued without the consultation and free consent of the workers expressed through their organisations.
- (9) The recommendations of the Committee for alleviating unemployment consequent on the introduction of efficiency methods of work were as follows—
- (a) The millowners should set up some machinery for taking note of all cases where workers are discharged on account of reduction of staff and help them as far as possible to get suitable employment either in some other mill or in some other industry
- (b) The Millowners Association should consider the advisability of a scheme for the payment of a gratuity to a worker, which may amount to any four weeks or six weeks wages according to his length of service payable in suitable sums to charged employees who may need help during the waiting period while they are seeking employment. The formation of an Out-of-Work Donation Fund on a voluntary basis to be created by a system of setting aside a contribution by the Millowners of one anna per operative per month to which fund the operatives through their representatives should be invited to contribute one anna or at least half an anna per head per month was suggested
- (10) The Trade Unions should combine to arrange for the assistance of an expert technical adviser in dealing with disputes arising under the Standardisation Scheme
- (11) In view of the fact that several matters required adjustment in connexion with the scheme for wage standardisation after it had been brought into operation and with a view to avoiding strikes and lockouts, machinery was provided by Mediation Rules agreed to by both sides for setting up Joint Committees to enquire into disputes arising under the scheme and to endeavour to arrange for their settlement. As these rules are the only rules of their kind yet framed in India they deserve to be reproduced in full

MEDIATION RULES.

Objects.—The object of these rules is to secure the consideration and settlement of trade disputes in their early stages, and thereby to preserve good feeling between Employers and On natives. For the purpose of carrying out this object, it is agreed as follows—

1 In the event of a trade dispute arising between any member of the Millowners' Association, Bombay, and any operative (e), member of

members of a Trade Union registered in accordance with the provisions of the Trade Union Registration Act, 1927 in any mill or mills in Bombay City and Island, other than a trade dispute as to the correct interpretation of the Standard Orders or the Standardisation rates of wages laid down for Bombay Mills which are

members of the Bombay Millowners' Association the following course shall be taken —

- (I) Before any notice shall be given by either party to terminate employment for the purpose of a lockout or strike the dispute shall be brought forthwith before a joint meeting of not less than two and not more than six authorised representatives of the mill or mills concerned and an equal number of representatives of the Trade Union or Unions of which the operatives is a (are) member (s) and such meeting shall be called within four days from the date of a written application by either party for such a meeting and if a settlement of the dispute is not come to at such meeting or at an adjournment thereof, then
 - (II) Before any notice shall be given by either party to terminate for the purpose of a lockout or a strike the dispute shall be brought before a joint meeting consisting of two or more members of the Employers Mediation Panel and an equal number of the Textile Trade Union Mediation Panel and such meeting shall be called within seven days from the date of an application by either party for such a meeting and if a settlement of the dispute be not come to at that meeting, or at an adjournment thereof then
 - (III) Before any notice shall be given by either party to terminate employment for the purpose of a lockout or strike, the dispute shall be brought before a joint meeting of the Committee of the Millowners Association, Bombay, and the representatives of the registered Textile Trade Unions of Bombay and such meeting shall be called within seven days from the date of an application by either party for such meeting and if a settlement be not come to at such meeting or at an adjournment thereof, then either party shall be at liberty to take whatever course it thinks fit.
- 2 In the event of a dispute arising as to the correct interpretation of the Standing Orders or the Standard Scheme of wages laid down for Bombay Mills which are members of the Bombay Millowners Association, the following course shall be taken —
- (I) The dispute shall in the first instance be investigated without delay by the management of the mills concerned who shall, after completing investigations, in those cases in which a settlement is not arrived at, submit a report within seven days in writing to the Secretary of the Millowners Association and to the Secretaries of the Textile Trade Unions registered in Bombay
 - (II) Upon receipt of such communication by the Secretary of the Mill-

owners Association, the dispute shall be brought before a joint meeting consisting of two or more members of the Employers Mediation Panel and an equal number of the Textile Trade Union Mediation Panel, to be called within seven days from the date on which the Secretary of the Millowners Association received the notification referred to in sub clause (I) and if a settlement of the dispute be not come to at that meeting, or at an adjournment thereof then

- (III) Upon application of either party to the dispute, the dispute shall be brought before a joint meeting of the Committee of the Bombay Millowners Association and the representative of the registered Textile Trade Unions of Bombay to be called within seven days from the receipt of an application by either party for such a meeting and if a settlement be not come to at such a meeting or at an adjournment thereof then either party shall be at liberty to take whatever course it thinks fit

3 Whenever a settlement of any trade dispute shall not have been come to and the operatives are on strike, or have been locked out meetings shall be held periodically between the representatives of the Millowners Association and representatives of the members of the Trade Unions concerned in the dispute. The first of such meetings shall be called within four weeks after the commencement of the strike or lockout and subsequent meetings at monthly or shorter intervals thereafter. The exact date, time and place of the first of such meetings shall be decided at the last joint meeting previous to the commencement of the strike or lockout.

4 Upon an application from either the Millowners Association, or at least one half of the registered Textile Trade Unions, a joint meeting of the Committee of the Millowners Association and the representatives of the registered Textile Trade Unions shall be called within 28 days from the date of such an application to discuss any suggestions for altering or amending terms and/or conditions of employment affecting or likely to affect more than one quarter of the Cotton Textile Mills in Bombay

5 The Secretary of the Millowners Association Bombay shall record the decisions of any joint meetings held in accordance with the terms of Rules 1 (II), 1 (III), 2 (II), 3 (II), 3 and 4.

The scheme submitted by the Millowners Association to the Bombay Strike Enquiry Committee for the standardisation of wages was never intended to be final and it was understood that it would be subject to changes wherever it was found, from actual experience of its working, to be necessary to alter. At the joint conferences held after the publication of the Committee's Report between Sub Committee of the Association and the Joint Strike Committee which was in charge of the conduct of the general strike of the year 1928 on behalf of labour, the representatives of the Bombay

General Kamgar Union raised extraneous issues like victimisation and the discussions for which the Conference was called were abandoned and the general strike of 1929 declared on grounds which had nothing to do with the scheme as such.

Owing to the undue prolongation of the general strike in the Bombay Cotton Mills of the year 1929 and the consequent disruption of labour it has not been possible for the Bombay Mill Owners Association to bring into operation the Mediation Rules recommended by the Bombay Strike Enquiry Committee for the simple reason that there are no recognised Unions representing of Bombay Cotton Mill workers in the City. The Bombay Textile Labour Union of which Mr. N. M. Joshi M.L.A. is the President has barely 470 members. The recognition accorded by the Bombay Millowners Association to the Bombay General Kamgar Union which claimed a membership of over fifty thousand after its registration in May 1928 was withdrawn by the Association on the publication of the reports of the Court of Enquiry appointed under the Trade Disputes Act to inquire into questions connected with the general strike of the year 1929 and the Riots Enquiry Committee. The Association has been giving anxious consideration to the practical steps which might be taken by mills to bring about better relations between employers and their workmen and for the prevention of accumulation of grievances. In a circular letter dated the 8th January 1930 addressed by the Association to all the mills advised to let them have issued instructions that all mills should take immediate steps which by complaints and grievances of the workers may be attended to by the management concerned at once. For this purpose complaint boxes are to be placed in the compounds of all mills in which workers are invited to put in petitions regarding their grievances or suggestions for improvement of conditions of work. The mills have been requested to give sympathetic consideration to any complaints or suggestions made and to redress or give effect to them wherever possible. Further measures calculated to improve the relations between the employers and the employed are under consideration. The Association have also devised measures for joint discussions between managers of mills and the Association on general questions relating to the internal administration of the mills.

The next Committee to be appointed in the Bombay Presidency was a Court of Enquiry appointed under the Trade Disputes Act in connexion with the general strike of cotton mill operatives in Bombay City of 1929. This will be dealt with below under the heading Trade Disputes Act.

Bengal—Several special Committees were appointed by the Government of Bengal during the period of intense industrial unrest during the years 1920-21.

(1) As the result of a strike of taxi-drivers and professional drivers of private cars in Calcutta which was caused by objections to certain rules, particularly (a) a new rule requiring medical examination of applicants for professional

drivers' license, and (b) another rule forbidding the carrying of attendants in taxis, Government appointed a Committee of Enquiry into the existing licensing regulations and the control of taxi cabs generally. The strike lasted from the 12th to the 20th January 1921 and ceased as a result of the institution of the inquiry. The Committee made a number of proposals for amendments in the existing regulations. These proposals were ultimately accepted and brought into effect on the 12th October 1921.

(2) As the result of a strike of drivers and conductors of Calcutta and Howrah tramways which lasted from the 27th January to the 21st February 1921 Government appointed a Committee of Enquiry after the resumption of work by the strikers on the 8th March 1921. The men resumed work towards the end of February on conditions (a) that the Calcutta Tramways Company would investigate their grievances and announce their decision within a week and (b) that if the men were dissatisfied with the Company's decision Government would appoint a Committee of Enquiry. There was general agreement between the Company and the men's representatives in regard to the majority of the Committee's recommendations. Some however of the Directors of the Company did not accept the terms. Another strike of the tramway employees of a much more protracted character broke out in 1922. It lasted from 20th December 1922 to 27th January 1923. No Committee of Enquiry was appointed although the representatives of the men raised several points which arose from the previous inquiry. Work was resumed unconditionally.

(3) During a strike on the light railway of Messrs Martin and Company in the 24 Parganas and Howrah which lasted from the 15th June to the 2nd July 1921 a special Conciliation Board was constituted by Government by a special resolution at the joint request of the employees and the employers concerned. The result of the Board's efforts was a compromise on most of the points raised by the workers, and as a result of the Board's recommendations it was agreed that joint works committees should be set up on the Howrah and Howrah-Sheakhala lines. Works Committees were established soon after the Board's report was published, but they failed to function owing to the men's indifference.

(4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government should appoint a Committee to enquire into the general causes of the prevailing unrest and to suggest remedial measures. The report of the Committee was published on the 16th June 1921. The main recommendations of the Committee were—

- (a) the establishment of joint works committees in industrial concerns
- (b) non intervention of Government in private industrial disputes which it was considered should be settled by voluntary conciliation.

- (d) the constitution by Government of a conciliation panel to deal with disputes in public utility services, and
- (e) the appointment by Government of special conciliation bodies in the case of private industrial disputes if both parties desired outside intervention

As the result of the recommendations of this Committee a conciliation panel was constituted under Government resolution dated the 26th August 1921. The panel contained thirty names, and was composed on a representative basis leading public bodies being asked to recommend persons to serve on it. The panel was reconstituted every year till 1929, when it was superseded by the Trade Disputes Act. Several applications for Government intervention were received during the period of the panel's existence but in no case did Government consider that intervention was justified.

The Government of Bengal agreed with the Committee's view that there was no reason why voluntary conciliation boards, wisely constituted, should not achieve a large measure of success in labour disputes affecting public utility services, where the parties had come to a dead-lock, and a solution of the disputes could only be found in the intervention of outsiders. The panel was intended to deal only with disputes affecting public utility services in Calcutta and its neighbourhood. In the settlement of ordinary labour disputes not directly affecting the public, the Committee held that it was not ordinarily the duty of Government to intervene in such disputes either directly or indirectly, but if both parties express a desire that their differences should be investigated by an impartial authority the Governor in Council should be prepared to establish a conciliation board to deal with the matter, or to take such other action as might be suitable in the circumstances of the case.

TRADE DISPUTES LEGISLATION.

The history of the various proposals for legislation providing machinery for the prevention and settlement of industrial disputes in India covers a period of about ten years. The findings of the Industrial Disputes Committee appointed by the Government of Bombay in the year 1921 in pursuance of a Resolution moved in the Bombay Legislative Council for the appointment of a Committee to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes has already been dealt with above. Mention has also been made of the action taken by the Government of Bombay under circumstances which led to its abandonment owing to the Government of India circularising a draft Bill as an All India measure. The Bill circulated by the Government of India in August 1924 was very wide and comprehensive in scope and extent. It covered all workmen including the employees of the Government of India and of any Local Government. An important distinction was made in the general body of workmen by dividing them into employees in public utility services and other employees. In the case of public utility services and in those services to be specially notified as such by the Governor-General in Council it was provided that it would not be lawful for any employer to declare or force a lock-out or for any workman to take part in a strike on account of any dispute, unless due notice of the proposed lock-out or strike was sent to the prescribed officer. Such strikes or lock-outs were not permitted until the expiry of 30 days after notice had been served, in cases where no order had been made for the reference of the dispute to a Board and until the expiry of 30 days after notice had been served, in cases where such an order had been made or until the expiry of 7 days after the publication of a report by a Board whichever of the two dates might be earlier. There was no separate provision in the Bill for Courts of Enquiry or Boards of Arbitration or Conciliation. The functions of these two separate institutions in industrial disputes legislation were vested under the Bill in one body which was to be called the Board of

Investigation and Conciliation. The members of a Board were to be selected from permanent panels of (1) representatives of employers, (2) representatives of employees, and (3) persons to be appointed as Chairmen. Both the Government of India and each Local Government were to form their own panels. The functions of these Boards were to endeavour to bring about a settlement of any disputes by a thorough investigation of the circumstances and cause of each dispute. Nothing further was heard about this Bill until the end of 1925 when His Excellency the Viceroy in a speech at the Annual Meeting of the Associated Chambers of Commerce of India and Ceylon, at Calcutta said: "The question of providing means of conciliation of trade disputes has been thoroughly explored but it would be premature to legislate on this question until the Trade Union Bill has become law." The Trade Unions Act was passed in the Legislative Assembly in March 1926 and was brought into operation with effect from the 1st June 1927.

In August 1928 the Government of India published their second Bill making provision for the investigation and settlement of trade disputes and for certain other purposes. This Bill was introduced in the Legislative Assembly for a motion for circulation on the 21st September 1928. The Bill differed in several important respects in comparison with the Government of India's original Bill of 1924. The main part of the Bill falls into three parts. Clauses 3 to 14 of the 1928 Bill related to the establishment of tribunals for the investigation and settlement of trade disputes. This part of the Bill was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference was that whereas the British Act sets a Standing Industrial Court, the Conciliation Boards which the Bill proposes to establish were intended to be appointed *ad hoc* like the Courts of Enquiry, in order to deal with particular disputes. The object of Courts of Enquiry which would ordinarily be composed of persons having no direct

interest in the disputes would be to investigate and report on such questions connected with the dispute as might be referred to them. The objects of Boards of Conciliation which would ordinarily include representatives of the parties to a dispute would be to secure a settlement of the dispute. Provisions were made so as to enable both Courts of Inquiry and Boards of Conciliation to enforce the attendance of witnesses and the production of documents. Neither party would be under any obligation to accept the finding of the Court or the advice of the Board and in cases where the dispute is not brought to an end during the deliberations of the tribunal that had been appointed, reliance was to be placed on the force of public opinion which would be enabled by the publication of the report of the tribunal to arrive at just conclusions on the merits of the dispute.

The second part of the Bill consisted of clause 1 in which related to public utility services. In accordance with the definition of "Public Utility Services" in clause 2 of the Bill Clause 1 would be applicable to such railway services as would be notified by the Governor General in Council. The clause made it a penal offence for workers employed on monthly wages in public utility services to strike without previous notice and also provided heavy penalties for persons committing such an offence. The clause was based on the principle that persons whose work was vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time had been given to examine the merits of their grievances and to explore the possibilities of arriving at a possible settlement. Provisions of a somewhat similar type already exist in the Indian Post Offices Act in a number of Municipal Acts in India, and the principle is one which is widely accepted in other countries.

Clauses 16 to 20 of the Bill contained certain special provisions relating to illegal strikes and lock-outs. These clauses followed closely the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act 1927. They were to be applicable only in the case of the strikes and lock-outs which satisfied both of two conditions: in the first place the strike or lock-out must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belonged and in the second place, the strike or lock-out must be designed to coerce Government either directly or by inflicting hardship on the community. If these conditions were satisfied, the strike or lock-out would become illegal. Persons furthering the strike or lock-out were liable to punishment and would be deprived of the protection granted to them by the Indian Trade Unions Act while persons refusing to take part in it would be protected from trade union disabilities to which they might otherwise be subjected.

The motion for circulation was adopted in the Legislative Assembly and the Bill was circulated to all Local Governments for opinion. Some Provincial Governments recommended that questions connected with picketing and intimidation of the type which were entirely responsible for the undue prolongation of the general strikes in the cotton mills of Bombay City of the years

1928 and 1929 and the rioting in Bombay in the year 1929 should also be covered. The Bill was referred to a Select Committee of the Legislative Assembly in February 1929.

The Select Committee decided to limit the duration of the Act to five years. In connection with the definition of the term "Public Utility Services" they were of the opinion that the wide power enabling the Government to declare any industry business or undertaking to be a public utility service was undesirable as well as unnecessary and the provision made for this in the draft Bill was omitted. Various proposals designed to lay upon the Government a definite obligation to convene a Court of Inquiry or a Board of Conciliation in cases where one of the parties so required were considered. But the Committee thought that unless both parties were agreed in desiring a reference it would be useless to fetter the discretion of the Government as to the time at which the matter was reported for action under clause 1. At the same time they held that no option should be left to the Government to refuse to appoint a Court or Board where the Government was satisfied that both parties were agreed as to the necessity as well as to the form which it should take. They therefore considered it necessary to provide that in every case a Court of Inquiry, where it consisted of one or more persons, should not include persons having an interest in the dispute or in any industry affected by it and in this connection the Committee proposed a further definition of the term. An independent person. The clause relating to the publication of the findings of Courts and Boards was maintained on the lines of the English Act so as to make it quite clear that every report of a Court or Board whether final or interim must be published, and that only the publication of such information or evidence as the appointing authority thought fit should be left to its discretion. It was considered inadvisable to forbid the representation of parties before Courts and Boards by legal practitioners subject only to exceptions and they re-drafted the clause in such a manner as to permit that such representation would ordinarily be permissible subject however to such conditions and restrictions as might be provided by the rules.

The Select Committee accepted the principle underlying the clause in connection with strikes in public utility services but they held that the clause as originally drafted was open to certain criticisms. For example it was pointed out that many persons are actually employed upon a daily wage which is in practice paid monthly also that the clause as provided would appear to penalise abstention from work on the part of a particular individual, and further that the clause was one-sided and inflicted no penalty upon an employer who locks out his workmen. The latter point was considered as one which should certainly be met as by the nature of his employment, a casual or day-to-day labourer must be entitled to cease work at any moment and be similarly liable to dismissal and it was agreed that he should therefore be excluded altogether from the operation of this clause. The Committee adopted a suggestion made by the Government of Bombay which made it clear that the cessation of work must be in the nature

of a strike as defined in the Bill and it was provided that in order to render it a penal offence the strike must be in breach of a definite contract between the employer and the workmen. The Committee added a collateral provision penalising an employer for locking out his workmen in breach of any contract. The Committee adopted the clause in connection with illegal strikes but with some amendments which in their opinion would restrict its scope without materially impairing its effectiveness. In sub-clause 2 of this section they made it clear that, for the application of money to be illegal it must not merely tend to further or support the strike but have the direct effect of so doing. This was intended to exclude a case in which money is spent upon the relief of the dependants of strikers. A further sub-clause borrowed from a similar provision from the English Act of 1927 explaining the circumstances in which a group of workmen should be deemed to be within the same trade or industry was added. The penalties provided for the instigation of an illegal strike were modified. With regard to clause 20 of the draft Bill, the Committee held that there was no sufficient justification for giving an option to the Government to apply for injunctions restraining the expense of the funds of a Trade Union in connection with an illegal strike. It was considered that under clause 16 such expenditure had been declared illegal and the persons properly interested in seeing that the funds were not mis-applied are the members of the Trade Union concerned. The Committee were of the opinion that the Bill had not been so altered as to require republication and they recommended that it should be passed.

as duly amended by them.

The Select Committee as such did not deal with the question of making provision for picketing and intimidation in their report but in a minute of dissent Sir Victor Sassoon Bart. stated that the alteration of the law relating to picketing was one for which, in his opinion the time was ripe. Picketing of any kind should be rendered illegal while a Court or Board is sitting and the law on picketing at any time should be altered to render it illegal at or near a workmen's house as under the English Law. There appeared to be some doubt as to whether legislation of this kind should take place in this Bill or by an Amending Bill to section 503 of the Indian Penal Code. It had been stated that if an amendment of this kind were passed in the Select Committee it would delay the Bill. As he did not desire to delay the acceptance of the provisions of this Bill he did not press the point which was raised by other members of the Select Committee. Sir Victor Sassoon however, thought that suitable action should be taken by Government either when the Bill came up before the House or by bringing out an amending Bill to the Indian Penal Code to deal with this most important and necessary point. The action taken by the Government of Bombay in connection with the passing of an Intimidation Act has been dealt with in the chapter on Industrial Disputes.

The Bill as amended by the Select Committee was passed by the Legislative Assembly on the 8th April 1929 without any change and received the assent of the Governor General on the 12th April 1929.

INDIA AND INTERNATIONAL LABOUR CONVENTIONS

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve the conditions in their own countries. In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be of special and urgent importance, but also brought into being the International Labour Organisation which was entrusted with the task of securing as far as practicable the observance of these principles. The International Labour Conference has been discussing various questions connected with industrial, agricultural and maritime labour since 1919 and has recorded its findings in conventions and recommendations. The Conventions and Recommendations adopted by the Conference are not automatically binding on the State Members but they have to be submitted to the Legislature of each country and this secures the regular examination both by the Executive Governments and the Legislatures of schemes which international opinion considers necessary and desirable for the amelioration of labour conditions. During the fourteen Conferences that have been held, 31 Conventions have been adopted. Out of these eleven have been ratified by India. The following is a full list of the Conventions which have been adopted,

those ratified by India being marked with an asterisk

First Conference (Washington 1919)

- 1 Limiting hours of work in industrial undertakings *
- 2 Unemployment *
- 3 Employment of women before and after child birth
- 4 Employment of women during night *
- 5 Night work of young persons employed in industry *

- 6 Fixing the minimum age for admission of children to industrial employment

Second Conference (Genoa 1920)

- 7 Fixing the minimum age for admission of children to employment at sea
- 8 Unemployment indemnity in case of loss or foundering of ships
- 9 Establishing facilities for finding employment for seamen

Third Conference (Geneva, 1921)

- 10 Age for admission of children to employment in agriculture
- 11 Rights of Association and Combination of agricultural workers *
- 12 Workmen's Compensation in agriculture
- 13 Use of white lead in painting

- 14 The application of the weekly rest in industrial undertakings *
- 15 Fixing the minimum age for the admission of young persons to employment as trimmers or stokers *
- 16 Compulsory medical examination of children and young persons employed at sea *

Seventh Conference (Geneva 1924)

- 17 Workmen's Compensation for accidents
- 18 Workmen's Compensation for the occupational diseases *
- 19 Equality of treatment for national and foreign workers as regards Workmen's Compensation for accidents *
- 20 Nightwork in bakeries

Fifth Conference (Geneva 1926)

- 21 Simplification of the inspection of emigrants on boardship *

Ninth Conference (Geneva 1926)

- 22 Seamen's Articles of Agreement
- 23 Registration of seamen

Tenth Conference (Geneva 1927)

- 24 Sickness insurance for workers in industry and commerce and for domestic services
- 25 Sickness insurance for agricultural workers

Eleventh Conference (Geneva 1928)

- 26 Creation of Minimum Wage fixing machinery

Twelfth Conference (Geneva 1929)

- 27 Weight of packages transported by vessels
- 28 Prevention of accidents in docks
- 29 *Fourteenth Conference (Geneva 1930)*

- 30 Forced or compulsory labour
- 31 Regulation of hours of work in commerce and offices

The Convention adopted in connection with white phosphorus at the Bern Convention formed the subject of one of the Washington recommendations. This Convention has also been ratified by India, but as this Convention did not strictly speaking, originate with the International Labour Organisation it has not been included in the list of Conventions given above. Out of the eleven Conventions adopted by the International Labour Conference which have been ratified by India only three involved no further legislation viz. items (2) (9) and (19) above. Two Conventions items (15) and (16) above have been ratified but the necessary legislation has not yet been undertaken. In some other cases, e.g. items (6) (9) (18) (23) & (30) above some action has been taken though the Conventions have not been ratified by the Government of India.

Recommendations

In addition to the Conventions dealt with above, the International Labour Conference have also adopted several Recommendations. These are shown below according to the years and at the Conferences at which they were adopted.

First Conference (Washington, 1919)

- 1 Unemployment
- 2 Reciprocity of treatment
- 3 Prevention of anthrax
- 4 Protection of women and children against lead poisoning
5. Government health services

Second Conference (Geneva, 1920)

- 6 Hours of work (fishing industry)
- 7 Hours of work (inland navigation)
- 8 National seamen's codes
- 9 Unemployment insurance (seamen)

Third Conference (Geneva, 1921)

- 10 Prevention of unemployment (agriculture)
- 11 Maternity (agriculture)
- 12 Night work of women (agriculture)
- 13 Night work of children and young persons (agriculture)
- 14 Technical agricultural education
- 15 Living in conditions (agriculture)
- 16 Social insurance (agriculture)

- 35 Regulation of forced or compulsory labour
- 36 Hours of work (hotels, restaurants etc.)
- 37 Hours of work (theatres, etc.)
- 38 Hours of work (hospitals, etc.)

The Thirteenth Conference which was held at Geneva in October 1929 was a Maritime Session. No new draft Conventions or Recommendations were adopted and the Session confined itself merely to preliminary discussions of four questions relating to seafarers which might be susceptible of treatment by Conventions, or Recommendations at a special Maritime Session to be held this year. On each of these four items—hours of work, sickness or injury welfare in ports, and qualifications of officers—the

business of this Session was to determine after a general exchange of views, whether the question should be made the subject of a second and decisive discussion in 1930 and, if so, to indicate the points on which in the meantime the International Labour Office should collect the formal opinions of the States Members.

At the Twelfth Session of the Conference held in June 1929, two most important subjects

discussed under the double discussion procedure, were (1) hours of work of salaried employees, and (2) forced labour. The question of forced labour is being discussed in a separate section. At the 11th session of the Conference held in June 1926 two Conventions, one regarding the regulation of hours of work in commerce and office and another regarding forced labour were adopted.

GOVERNMENT ADMINISTRATION

During pre-Reform days Labour was not a question to which the Central or provincial Governments in India gave the same attention as they did to such subjects as education, health or justice. After the amendment of the Indian Factories Act of 1891 in 1911 the appointment of the *Indian Industrial Commission* in May, 1916, may be considered to be the first milestone in the progressive interest taken by Government in questions connected with labour. The active participation of India in the Great War led to the creation of an unprecedented opportunity and the emergence of an unprecedented need for a definite industrial policy for India as a whole. The examination of various industrial questions by the Industrial Commission included to a certain extent, the examination of questions connected with labour as well. Previous to this date no provincial or All India inquiries of a general character were held into conditions of labour with the exception of some quinquennial censuses into agricultural wages. No information was available in 1919 as to the rates of wages which were paid in industry and for that matter, very little information in this direction is available even to-day. Indian labour secured its first opportunity with her participation in the signing of the treaty of peace and her becoming a live member of the international community of nations. The participation by India, in the first International Labour Conference held at Washington in the year 1919 made it necessary for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the Central and Provincial Legislatures but also to allocate to special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I, Part 2, Rule 26) industrial matters included under the heads factories and welfare of labour fall within the scope of the provincial legislatures. Under the same rules "regulation of mines and inter provincial migration" are central subjects. A Labour Bureau was established by the Government of India in the year 1920 but it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The administration of labour matters since then has been in the hands of the Department of Industries and Labour with a Member of the Viceroy's Council holding the portfolio. Amongst Local Governments the Bengal and the Madras Presidencies were the first in the field for the creation of special Labour Officers

Bengal.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerce

Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also the number of labour organisations. From time to time as circumstances permitted, he was to conduct special inquiries. He was, however not provided with an adequate staff for the purpose. The staff of his office consisted of only one clerk and one stenographer. The Labour Intelligence Officer is also the Deputy Secretary to the Government of Bengal in the Commerce Department and since the bringing into effect of the Indian Trade Unions Act 1926, he has also been appointed Registrar of Trade Unions. On his appointment as Registrar of Trade Unions the stenographer was replaced by an additional clerk. The Labour Intelligence Officer has made frequent inquiries into questions referred to the Local Government by the Government of India in connection with proposals for labour legislation but no special inquiries have been conducted or reports of such inquiries published.

Madras

The Government of Madras appointed a Labour Commissioner in the same year viz. 1920 to watch and study at all times the conditions of labour particularly industrial labour throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employees. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Intelligence Officer, Bengal, the Labour Commissioner in Madras has also a special statistical office to deal with labour statistics and no reports have been published of any special inquiries into questions connected with industrial labour in the Presidency. Since the creation of the Office the conduct of periodic censuses into agricultural wages is, however placed in his hands.

The Bombay Labour Office

The real pioneer work in the field of labour information and statistics in India during the last nine years has been done by the Labour Office of the Government of Bombay which was established in April 1921. In the Government resolution announcing the establishment of this

office the following were declared to be its functions.—

(1) *Labour Statistics and Intelligence*.—These relate to the conditions under which labour works and include information relating to the cost of living, wages hours of labour, family budgets strikes and lockouts, and similar matters.

(2) *Industrial Disputes*.—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise and

(3) *Legislation and other matters relating to labour*.—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws.

When the Labour Office was first started it was placed in charge of Director of Labour. The post of the Director of Labour was however abolished in 1929 and at present the Officer in Charge of the Labour Office is styled the Director of Information and Labour Intelligence. He is also the Registrar of Trade Unions and the Commissioner for Workmen's Compensation. In addition to the Director there are three other Gazetted Officers who are styled Investigators one of whom is in charge of the branch office at Ahmedabad. There are also three whole time lady investigators in Bombay. All investigators receive conveyance allowances. The office staff contains two Statistical Assistants three senior clerks eight junior clerks two stenographers, one typist one cashier one despatcher, one dastar and five peons in Bombay, and one peon in Ahmedabad. The activities of the office comprise (1) prices and cost of living, (2) wages and hours of labour (3) rents (4) economic and social conditions of various communities (5) unemployment (6) industrial disputes (7) trade unions, (8) other industrial and labour intelligence (9) international labour intelligence, (10) labour legislation (11) the *Labour Gazette*, (12) library and (13) office organisation.

The *Labour Gazette* has been published monthly from September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India. A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodicals received from Labour Ministries, International organisations and research organisations in various parts of the world.

The Labour Office had conducted several special inquiries, the results of which have either been published in the form of special reports or as special articles in the *Labour Gazette*. Among the inquiries the results of which have been published in the form of reports are three inquiries into wages and hours of labour in the Cotton Mill Industry in the Bombay Presidency for the years 1921, 1923 and 1928 four reports of inquiries into family budgets three of which related to working class family budgets in Bombay Ahmedabad and Sholapur and the fourth to middle class family budgets in Bombay City. The remaining reports dealt with inquiries into agricultural wages in the Bombay Presidency an inquiry into deductions from wages or payments in respect of fines and an inquiry into middle class unemployment in the Bombay Presidency. Other special inquiries related to wages of peons and municipal workers, welfare works rentals in Bombay and Ahmedabad, maternity cases among women operatives, methods of wage payments crechans, clerical wages in Bombay Presidency, incidence of sickness among cotton mill operatives, infant mortality, etc. In the *Labour Gazette* statistics are regularly published for a working class cost of living index number for Bombay wholesale prices index numbers for Bombay and Karachi retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for Workmen's Compensation prosecutions under the Indian Factories Act, accidents in factories production of cotton yarn and cloth and the employment situation. A new working class index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the *Labour Gazette* since January 1930. A working class cost of living index number for Sholapur is also under preparation and will shortly be published. Quarterly information is also collected with regard to all known Trade Unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months. The present staff of the Labour Office is as follows.—

Director of Information and Labour Intelligence.—Mr J. F. Gonnings, Barr-at-Law, J.F.

Senior Investigator.—Mr S. R. Deshpande, A. Litt (Oxon).

Junior Investigator and Assistant to the Registrar of Trade Unions.—Mr N. A. Mehrban, B.A.

Labour Investigator at Ahmedabad.—Mr A. S. Iyengar, B.A. LL.B.

Senior Lady Investigator.—Mrs. K. Wagh.

Lady Investigators.—Misses G. Pimpalkhare and S. Dalholkar.

The Director of Information and Labour Intelligence has four offices under his charge (1) The Labour Office (2) the Information Office (3) the Office of the Commissioner for Workmen's Compensation and (4) the Office of the Registrar of Trade Unions. In the case of the Office of the Registrar of Trade Unions one Investigator of the Labour Office has been appointed as Assistant to the Registrar of Trade Unions and the office work is being done

by a Statistical Assistant and a junior clerk from the staff of the Labour Office. The Information Office is under the administration of the Home Department. The Labour Office was under the administration of the Home Department till the year 1925 but it was transferred to the General Department and is now under the control of the Political Department. The Factories Office is under the immediate control of the Collector of Bombay and for administrative purposes under the Political Department.

Central Provinces

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Revenue Department deals with mines. The Department of Industries under the Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit and Registrar of Trade Unions. The Factory Office is under the general supervision of the Director of Industries. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board. But the Board acts purely in an advisory capacity.

Other Provinces

In Burma a Labour Statistics Bureau with a Special Officer in charge was set up in 1928. This Bureau has conducted an extensive investigation into the standard and cost of living of the working classes in Rangoon. The Report of which was published in 1928. In the Punjab the Director of Industries is the administrative officer for all acts concerned with labour. In the United Provinces almost all departments of the Local Government deal with labour questions. Labour as such is with the Home Member, electricity is with the Finance Member, the factory staff is under the immediate control of the Director of Industries who is under the Minister of Education and Industries and Boiler Inspection is under the Public Works Department. The Registrar of Co-operative Societies of the United Provinces has been appointed ex officio Registrar of Trade Unions in the Province. In Assam the main question connected with labour is that concerning the recruitment of labour for the tea plantations from other provinces. As inter provincial migration is a Central subject, the Local Government are not very actively interested in the special considerations of other labour questions.

Representation on Legislatures—The Government of India nominates one member for labour interests in the Legislative Assembly. Since the last reforms were brought into operation Mr N. M. Joshi, of the Servants of India Society, has been continuously nominated as labour member in the Legislative Assembly in the Bombay Presidency. The Local Government had provided one seat for labour, and Mr

S. K. Bose, was nominated as the labour member in the first two Councils after the reforms. In 1927 the Local Government increased the number of seats for labour to three but the principle of nomination was maintained. The three persons representing labour interests in the Bombay Legislative Council at present are Messrs. S. K. Bose, Syed Munwar and R. B. Bakhale. In the Central Provinces, Mr B. W. Fulay a Nagpur pleader has been nominated as a representative of urban factory labour. In Bengal there have been two nominated members to represent labour interests since the introduction of the reforms. The Assam Government reserves one seat for the nomination of a member to represent labour but it has been found impracticable to find any one who could adequately represent this constituency and therefore the seat is vacant in the present Assam Legislative Council.

Relation between Central and Local Governments—It has already been stated above that under the Devolution Rules factories settlement of labour disputes and welfare of labour are reserved subjects. These subjects are however subject to central legislation. The provincial legislatures are not debarred from initiating legislation on these matters but they can only do so with the previous sanction of the Governor General in Council. The actual administration of the Acts passed by the central legislature under the above heads falls on the Local Governments who have to bear the entire cost of administration as it is not permissible under the constitution to incur any expenditure from Central revenues on the administration of provincial subjects. This constitutional position is, perhaps, to some extent, responsible for the opposition shown by some of the Local Governments to labour measures on which their opinion have been invited by the Government of India during recent years. The Governor General in Council exercises control over the administration of the Acts passed by the legislature in two ways. In the first place, he is vested by Statute with the general power of superintendence, direction and control, and, secondly, these Acts in most cases either reserve certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India has been to grant to the provinces as free a hand as possible in the administration of the various All India Acts.

Effect of differences in Law in Indian States and British India—Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the Factory Law in British India by establishing mills or factories in the territories of Indian States.

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or 'chits,' and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants Ordinances (*Gesindeordnung*) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in Ceylon. The Act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and under servants, female servants, cooks, coachmen, housekeepers and house and garden coolies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the island or for any town or district, to which the Ordinance is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service the registrar may grant him 'provisional' registration, to be thereafter converted into 'confirmed' registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various penalties of fine as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment with or without hard labour not exceeding 6 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to derive the benefit of the provisions

Sea Routes between India and Europe.

The Indian part for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West via Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O. the Anchor Line, the City and Hall Line, the Lloyd Triestino and the British India Line. The P. & O. line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and

the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, the Y. & N. Australian Company, and Royal Dutch Lines are the chief. Besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 15 days via Marseilles. The following are the fares which are convertible at approximately current rates of exchange—

Paninsular and Oriental S. N. Co

FARES FROM BOMBAY OR KARACHI		1st Saloon				2nd Saloon	
		A	B	C	D	A	B
		£	£	£	£	£	£
Free passages (single and return) are granted between Karachi and Bombay by British India Steamer							
To Plymouth or London by sea, Single	Return	72	82	54	46	42	36
To Marseilles, Single		126	109	90	81	43	63
To " " Return		81	74	68	58	52	46

		92	82	72	62	56	50
		161	144	126	108	98	88
RETURN							
By the British India S. N. Co fares to London by sea from Madras are—							
Single 1st saloon £86, 2nd saloon £52. Return £116 and £91 Bombay to Marseilles (Steamers carrying one class of accommodation only)							
Single A £84, B £80, C £56 and Return A £112, B £105, C £58							
By the Anchor Line fares to Liverpool from Bombay or Karachi are—1st saloon Rs. 800 single and Rs. 1,400 return. To Marseilles—Rs. 747 and (return from Liverpool) Rs. 1,354							
By Ellerman's City and "Hall Lines fares from Bombay or Karachi to Liverpool, are—							
1st saloon Single Rs. 868, return Rs. 1,493							
2nd saloon single Rs. 640, return Rs. 1,120							
From Bombay or Karachi to Marseilles							
1st saloon single Rs. 800 return Rs. 1,447							
2nd saloon single Rs. 610, return Rs. 1,068							
Calcutta to London							
1st saloon single Rs. 907, return Rs. 1,587							
2nd saloon single Rs. 688, return Rs. 1,213							
By Bibby Line fares from Rangoon to London							
1st saloon single Rs. 1,015, return Rs. 1,710							
Rangoon to Marseilles, 1st saloon single Rs. 910							
Rangoon to Marseilles, 1st saloon return Rs. 1,800							
The Bibby Line fares from Colombo are as follows—							
Colombo Marseilles single Rs. 775 return Rs. 1,340							
Colombo London single Rs. 980 return Rs. 1,635							
The Bibby Line steamers carry 1st class passengers only							
By Henderson Line fares from Rangoon to Liverpool, 1st saloon are—single £65 return (available for 4 months) £100, (available for 2 years) £117							
By Lloyd Triestino Line fares from Bombay to Brindisi, Venice or Trieste are—							
1st class £85, 2nd class £50. Return rates available for 2 years at one and three-fourth fares. 100 days return tickets 1st class, £86 and 2nd class, £72							
To London 1st class, 100 and 2nd class £82							
Ballings from Bombay every alternative Tuesday							

INDIAN TRAIN SERVICE.

The distances and railway fares from Bombay to the principal centres of other parts of India are as follow—

	Miles.	1st Class	2nd Class
Delhi, B. B. & C. I. Railway, via new Nagpur-Muzra direct route	865	Rs. 4 0	Rs. 2 0
Delhi, G. I. P. Railway, via Agra	957	85 7 0	42 12 0
Muzra, via Delhi	1,229	122 6 0	61 3 0
Calcutta, G. I. P. from Bombay, via Jabalpur & Allahabad	1,549	123 1 0	61 9 0
Calcutta, G. I. P. from Bombay, via Nagpur	1,223	115 3 0	57 10 0
Madras, G. I. P. from Bombay, via Raichur	794	79 8 0	39 9 0
Madras, via Delhi	1,168	118 6 0	56 11 0

* Oct to April inclusive

May to Sept Rs. 115-4-0 & 57-11-0 only

CIVIL AVIATION.

Civil Aviation in India is under the control of the Director of Civil Aviation, whose newly instituted Department, like the Department of Posts and Telegraphs comes within the portfolio of the Member of the Executive Council of the Government-General for Industries and Labour. The present holder of the appointment is Lt.-Col. F. O. Sheldermine O.B.E. Eight Indians are now undergoing training in England with a view to their future employment in the Civil Aviation Department as Aerodrome Officers, Inspectors of Aircraft and Engines etc. Two more will be sent to England during 1930. These men are not being trained primarily as commercial pilots, but it is possible that some of them, if they show special aptitude and desire to adopt a pilot's career, may receive further training with this object in view. All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and periods of attachment to selected aircraft works and to the London Terminal Aerodrome at Croydon. The course lasts for two years and three months during which time the men receive scholarships amounting to £ 240 per annum. A condition of eligibility for these scholarships is that applicants must possess a B.Sc. degree in Engineering or Physics.

An Indian State Air Service between Karachi and Delhi was inaugurated as a weekly service in each direction on 30th December 1929. It is operated by aircraft chartered from Imperial Airways, Ltd., under an agreement which is operative for two years. It runs in connection with the air mail between Karachi and England. It is hoped to extend this service to Calcutta and to Rangoon in the near future. These extensions will be run with machines owned and operated by the Government of India and special regard will be paid to the training of Indians, both as pilots and as mechanics. It will probably be necessary to suspend the operation of the Calcutta-Rangoon section during the monsoon of 1931, as it is not anticipated that the new landing grounds which are to be constructed during 1930 on this section will by then be sufficiently consolidated to permit of their use after heavy rain.

Interest in aviation is given in India only through Clubs founded for the purpose. These are the Karachi Aero Club, which at the end of 1929 had 173 members, the Bombay Flying Club, with 174 members, the Delhi Flying Club, with 204 members and the Bengal Flying Club, with 257 members. Above these is the Aero Club of India and Burma, which exercises control and general co-ordination of activities under the Director of Civil Aviation with the Government of India.

The movement dates from March, 1927 when as a result of the interest taken in the subject by Sir Victor Sassoon Bt., M.L.A. it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India was formed, composed of about 40 members of the Assembly. Its first meeting was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other

members joined. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilize the Government grants which were at this time proposed and the formation of local clubs followed. The Aero Club entered into an agreement with the Royal Aero Club of Great Britain and thereby became its official representative in India and Burma.

The Government of India in December, 1927 received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 10,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the Clubs' income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. These grants commenced as from 1st April 1928 and were to continue for two years. Agreements were entered into between the Secretary of State and the Aero Club and between him and the provincial clubs, laying down the conditions of financial assistance. Most aeroplanes manufactured by the De Havilland Aircraft Co. were selected as the training machines. Eight of these arrived in December, 1928, and training with them began in January, 1929.

Particulars regarding the Provincial Clubs are as follow—

Each of the six Clubs was presented with two aeroplanes by the Government and their other machines and their performances up to the end of 1930 are—

Bengal Flying Club, 3 privately owned aeroplanes, 1,080 hours flown in 1930
Bombay Flying Club, 5 privately owned aeroplanes, 1,497 hours flown in 1930
Delhi Flying Club, 3 privately owned aeroplanes, 1,181 hours flown in 1930
Karachi Aero Club, 4 privately owned aeroplanes, 1,455 hours flown in 1930
Punjab Flying Club, 1 privately owned aeroplane, 709 hours flown during 1930
This Club commenced functioning on the 1st June

Madras Flying Club has no privately owned aeroplanes. 284 hours flown since its inception at the end of July, 1930

Total flying hours for all Clubs, 8,707. The number of hours flown by soloists are—Europeans 2,693, Indians 2,913. The number of pilots turned out during 1930 is 65 of whom 46 are Indians (5 being lady pilots).

The Officers of the Aero Club of India and Burma are—Chairman Sir Victor Sassoon, Vice-Chairman, Mr. H. A. Sarda, C.J.R. I.O.A. Director of Posts and Telegraphs Secretary, Wing Commander A. R. C. Cooper. The Pilot Instructors of the provincial clubs are—

KARACHI—Flight Lieut. W. Jones.
BOMBAY—Mr. W. H. Vetch.
BENGAL—Mr. W. F. Warner.
DELHI—Capt. A. J. Bailey.
MADRAS—Flight Lieut. H. N. Hawker.
PUNJAB—Capt. B. S. Leete.

THE SUEZ CANAL

At the General Meeting of the Suez Canal Company held in Paris in 1930 the Chairman said that the transit receipts for 1929 were 4 per cent higher than in the previous year, and a reduction of 25 centimes in the transit due on loaded vessels was therefore made from September 1930.

Record Traffic through the Canal.—The traffic through the Canal in 1929 showed by comparison with that for 1928 (which broke all previous records) an increase of 1,500,112 tons net—namely 4.9 per cent—to 34,466,014 tons. The number of transits was 6,274 against 6,064 in 1928. The average size of vessels slightly increased to 7,376 tons gross and the proportion of transits made by vessels of more than 10,000 tons gross increased from 11 to 11.7 per cent. The average stay of vessels in the Canal was 14 hours 57 minutes, which was the lowest figure yet recorded.

The total weight of goods carried through the Canal was 34,018,000 tons, exceeding by 1,894,000 tons the maximum recorded for 1928.

The progress noted in 1929 was not maintained during 1930. Since March 1930 the tonnage has fallen considerably below the figures recorded in 1929 at the end of April the difference was 407,351 tons.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1 ft., making it 80 ft. English.

The maximum permissible draught of ships using the Canal was 24.4 feet in 1870. In 1880 ships drawing 25.4 feet could make the passage, and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Mathews and Mr. Anthony Lester, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 Feet Channel.—The declared policy of the Canal Company in regard to the deepening

of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 28 feet 2 inches. In June, 1913, the width at a depth of 82 feet 3 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 198 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said works of capital importance for the protection of the entry to the Canal, were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres, the protective blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need of any apprehension as to its future.

Travel in India.

391

Thirty years ago a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow and the facilities for travel were so indifferent that he was a bold man who committed himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. A dozen lines have covered the sea route between Europe and India and Ceylon with a plethora of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe, and the Indian hotel has grown into a really comfortable caravanserai.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West Bombay provides their first glimpse of India while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century the import and export trade of India has largely passed. A-ch purple against the dawn the spurs of the Western Ghats, thrones of mystery stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military gratitude. Every schoolboy knows the story of the Marhatta campaigns, they are but one—the Marhattas—of the races within races that populate this vast country where two hundred and twenty two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throbbing of the drum, the chant of the mullahs announcing that God is Almighty and Mohammed is his Prophet, the song of the Shazam, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness there is no region in all the world so full of vibrant colour, of populous cities, of buildings designed by master architects of bygone days of diverse races, of absorbing subjects for study and observation such as the customs, religious philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist India can offer every charm in forest, mountain valley, cultivated plain, and wild waste.

To the sportsman it can furnish sport such as few countries can give, the tiger in the forest, the great mahseer in many rivers, the wily snipe on the fens, the strong winged duck, the sinking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still und climbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a scene of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling, each other in the streets representatives of half the races of mankind. The Towers of Silence and the *Chattras* of Ekphanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the *G. I. P.* Railway *via* the Mithan and Ajanta Gorges, Saugli, Gwalior, Agra and Mathura or by the *B. & G. I.* Railway *via* Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Mathura. If you decide to go by the *G. I. P.* Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe, while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Saugli are Buddhist buildings dating back to 150 B. C. The stone carvings are remarkable and are well worth a visit. As you proceed further north Gwalior is reached. The great Fort of Gwalior has been described by Ferguson as the most remarkable and interesting example of a Hindu palace of an early age in India. Seventy miles further on lies Agra and of all the romantic cities of India Agra must surely come first for it contains that crowning glory in marble, the Taj Mahal. Generations have come and gone since that far day when that most splendid of emperors Shahjahan bowed his head before his wife's coffin in the vault of the fabled Taj. The building is better known than any other in the world. Visit it by moonlight and later by daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon-drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacles. See it also in the fading evening, light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy

structures so light and graceful that they seem to rest on air, of buoyant cupolas and climbing chhatrapatis. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wondrous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1640 A.D. on a lonely eminence Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimages due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthral him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghul Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mughal, Hindu Rao's house, the Kashmir Gate beneath which some still salute dead Home and Salikah as they pass, the tree commemorated since of redoubt and, battery, Nicholson's grave, Asoka's pillar, the site of the great Durbat.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 285 feet in height, erected in the 12th century A.D. of red and cream sandstone crowns the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit is divided by five corbelled balconies

while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab Siri, Tughlakabad, Jahanabad, Ferozabad, Ferozabad, Qila and Shahjahanabad the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at Udaipur is there in its perfection the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake as the Illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab, the Land of the Five Rivers which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble canopy, rises the Golden Temple nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Bahar, the founder of that dynasty, made it a place of Royal Residence reminiscent of which are to be found to-day in the pleasure gardens, tombs, mosques and pavilions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impenetrable

mountain barrier of the North West Frontier, which in historical association and has from time immemorial been the route by which conquering hordes have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continuous string of caravans of great shaggy raimen laden with merchandise accompanied by stern strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as an emerald set in pearls is a land of rich forests and upland pastures of slow flowing rivers and glittering mountain torrents fringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland that is Srinagar the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow capped mountains in the background. When days are warm on the lakes a trip can be made up the valleys and you can live in Arscay and see the bear in his native haunts and the mountain deer on the hill tops.

For those who have arrived at Delhi via Bombay an interesting return trip can be made via Benares and Calcutta. Many visitors however, enter India via Calcutta and from here also many interesting tours can be made.

Calcutta one of the first trading ports of the British East India Company in India, was founded by Job Charnock. It is now the second city in the British Empire. Its public buildings the Indian museum the Fort the Jain Temple the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest the world's highest peak and, in order to do so they must travel some 7 miles away past Ghoom station to Tiger's Hill (814 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early spring or late autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 80,000 feet with the awe inspiring Kan abanjung in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar one of the most beautifully worked things in India with a clay figure of the Dawn on its capital. Inconspicuous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple

There cars 45 feet high standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 64 miles by motor road stands the Black Pagoda at Konarak the temple of the Sun God Surya.

On the road to Delhi the visitor will travel through the Gangetic plain one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Bath Gaya and Benares, cities intimately connected with the mythology like Lucknow and Cawnpore and other flourishing cities.

Bath Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the great Renunciation and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics the Mahabharata and the Ramayana which deal with events long before the Christian era. Benares is however one of the most holy cities in India for the Hindu and its spiritual significance is shown in the quotation "Happy is the Hindu who dies in Benares for he is transported at once to Svaya's Hinayana Paradise on Mount Kalasa north of Lake Manasa where the great three eyed ascetic seeing the just the great and the future sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreath in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archaeology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle of heroic deeds and noble sacrifice its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama the mythical hero of the Ramayana the epic poem of the Hindus but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1722-1856).

All visitors wend their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until

he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well known

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazars where business is still carried on as it has been done for generations

Northern and Central India is however not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples full of the most wonderful carving while Mysore one of the most progressive Indian States can show you fine buildings, falls higher than Niagara and wonderful scenery

Madras is the capital of the Madras Presidency and the third largest town in India and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there

Mysore commemorates in its name the destruction of Mahasura a minotaur or buffalo headed monster by Chaturmudi, the form under which the consort of Shiva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and lions are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untamed nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At Madras and Trichinopoly will be found examples of some of the best and most interesting work in South India

Madras has been aptly described by European scholars as the Athens of South India and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in the hall of Mantapam of a Thousand Pillars

can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation

No one visiting India should miss the opportunity of seeing Burma for it is a country of extraordinary charm a country of contrasts. Whatever be your hobby whatever be your interest, be it sport history ethnology or botany or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man bordering rushing torrents or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters. China, Japan and the fierce Black Lins. Yet you will also find civilisation in the big cities like Rangoon and Maymye. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in India China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age the sport, and the many things of interest which India and India alone can offer.

December January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India. Simla, the summer capital of India. Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos Cook & Sons the American Express Co., Cox & King's Agents Ltd Army & Navy Stores, Grindlay & Co etc. and the Publicity Officers of all the more important Railways as well as the Manager Indian Railways Publicity Bureau, 57, Haymarket, London, and the Resident

Manager, Indian Railways Publicity Bureau
Delhi House 38 East 57th Street, New York,
will work out tours to suit the convenience of
individual parties. Many of the leading tourist
companies will also arrange for inclusive and
conducted tours. There are certain places,
which are very well known such as Delhi Agra
Benares Darjeeling Jaipur the Khivier Pass
Kashmir and Mysore but there are innumerable
other places almost as well known containing
sights which cannot be equalled in other parts

of the world. Puri Lucknow Amritsar,
Udaipur Mount Abu, Gwalior Bikaner and Ajanta
Caves and Madura are a few of them while in
Burma Mandalay and the famous old cities
of Ava and Amarapura nearby are well worth
a visit.

A selection of itineraries for long and short
tours in India and Burma is given below.
These show what can be seen in certain periods
of time but they can be varied to suit individual
parties or taken in the reverse direction.

Tour No 1—4 weeks—Bombay Udaipur Jaipur Peshawar Lahore, Amritsar Delhi, Agra,
Cawnpore Lucknow Benares Darjeeling and Calcutta

Alternatives (a) Puri and Konarak in place of Darjeeling.

(b) Gwalior Kanoli Feroz and Ajanta Caves in place of Jaipur and Udaipur.

	1st	2nd	Servants 3rd
Total fare (approximate) on the basis of return tickets at 1½ single fares (Calcutta—Darjeeling and Delhi—Peshawar)	Rs. 311 £ 21 \$ 121	170 11 62	5 4 21

Tour No 2—2 weeks—Bombay Udaipur Jaipur Delhi Agra Gwalior Kanoli and Bombay
Alternative Benares in place of Gwalior and Kanoli

	1st	2nd	Servants 3rd
Total fare (approximate)	Rs. 190 £ 14 \$ 69	91 7 34	10 2 11

If the alternative is taken the fares are increased by about one quarter

Tour No 3—1 week—Delhi Lahore Amritsar Peshawar and Delhi

	1st	2nd	Servants 3rd
Total fare (approximate) on basis of return tickets at 1½ single fares	Rs. 69 £ 5 \$ 25	31 3 14	10 1 4

Tour No 4—10 days—Bombay Poona Mysore Madras Trichinopoly Madura and Colombo

	1st	2nd	Servants 3rd
Total fare (approximate)	Rs. 181 £ 14 \$ 66	93 7 34	31 2 12

NOTE—If extra time can be allowed at Mysore and Srirangapatna Falls and Ootacamund
can be visited.

Tour No 5—2 weeks—Colombo Madura Madras Mysore, Ootacamund Trichinopoly and
Colombo

	1st	2nd	Servants 3rd
Total fare by train (approximate)	Rs. 173 £ 12 \$ 63	89 7 32	31 3 11

NOTE—An interesting trip can be made after leaving Ootacamund east to Coimbatore where the white
Jews live, along the backwaters to Alleppey and Quilon by motor launch and motor car down to
Trivandrum the capital of Travancore by train and by motor car to Cape Comorin the southern
most point of India and, back via Trivandrum and Madura to Colombo. This would take about
seven days.

Tour No 6—1 week—Rangoon, Mandalay, Gokteik Viaduct, Mandalay—Rangoon.

	1st	2nd	Servants 3rd
Total fare (approximate)	Rs 70 £ 5 \$ 25	35 8 13	12 1 4

NOTE—Many interesting trips off the beaten track can be made in Burma but special arrangements are necessary

For any visitor landing in Calcutta it is possible to visit Benares, Agra, Delhi Jaipur Bombay Mysore Madras Trichinopoly and Madras and still reach Colombo on the 14th day but this entails sightseeing by day and travelling most nights and is not recommended for the ordinary visitor. A very attractive tour can, however be worked out for a similar trip over a period of four weeks either allowing more time at the more important places or including other of the places mentioned in Tour 1 and 4 such as Darjeeling Puri, the Khyber Pass, Lahore and Amritsar Ludapur, etc

Travelling in India is not expensive when

the long distances travelled are taken into consideration. The first second and Indian servants fares are shown at the end of each tour. Hotel expenses average about Rs 10 (22/6 or 54 dollars) per person a day except when special rates are charged during certain special periods while a motor car for the day can be hired for Rs 25 to Rs 30 (58/6 to 45/6 or 9 to 11 dollars) a day in most places, except where long distances have to be covered. Where the distances are short, tongas and two horsed landaus can be used and the daily charges vary from Rs 3-8 to Rs 9 (5/6 to 13/6 or 14 to 34 dollars). Guides with a good knowledge of English can be obtained from Rs 5 to Rs 10 (7/6 to 15/6 or 2 to 4 dollars) a day

HOTELS IN INDIA, BURMA, CEYLON AND MALAYA.

AGRA—Cecil, Laurie's Great Northern, Metro Pole
AMMADABAD—Grand
ALAHABAD—Grand
BANGALORE—Cubbon West End, Lavender's
BARODA—The Guest House
BENARES—Clark's de Paris
BOMBAY—Apollo, Grand Majestic Taj Mahal, Regent
CALCUTTA—Continental, Grand, Great Eastern, Spence's
CANBERRA—Civilian Military
COOKDOON—Glenview
DARJEELING—Grand (Rockville), Mount Everest, Park
DELHI—Cecil Clarke's, Maidens, Swiss
GUWAHATI—Grand
GULMARG (Kashmir)—Nedon's
JAIPUR—Jaipur, Kaiser-i-Hind, New
JERSEY—Jackson's

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognized as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province to achieve these two objects the removal of the capital from Calcutta was essential. Its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour, and, as Lord Curzon said in his despatch on the subject, to the races of India for whom the legends and records of the past are charged with so intense a meaning, the resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country.

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not man-made. It is not cluttered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surge-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariat. The Government Centre has been given a position at Raisina Hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker

for the Secretariat. The former building is estimated to cost approximately Rs. 140 lakhs and the latter group were originally estimated to some Rs. 134 lakhs. The provision made in the design of the Secretariat for extensions in case it used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters which moved into the new capital at the end of the Simla season, 1929. To the east of the forum and below it is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to the Rajpath. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament Street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pabarganj, which lies to the west of Old Delhi in the direction of the Ridge. The main roads or avenues range from 70 feet to 140 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital, for the use of the Government of India during the period of the building of the new capital an area was selected along the Allpur Road, between the existing civil station of Delhi and the Ridge. The architecture and method of construction were similar to those adopted in the exhibition buildings at Allahabad in 1910, but the buildings have outlasted the transitional period for which they are intended. Army Headquarters were still housed in them in the winter until the season 1929-30 and others are occupied for various purposes including the temporary accommodation of Delhi University.

In October 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 578 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,240 and of the new area 14,562, or a total of 412,802. The population of the Municipal town of Delhi was 2,28,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged "battle of the styles" over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the spirit

of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument. The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architects' aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the amount, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1931, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee in its report published in January 1933 estimated the total expenditure at Rs 1,292 lakhs including Rs 42 lakhs for loss by exchange. Actual expenditure upto approximately the end of 1930 was Rs 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts may be expected.

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General Central Revenue, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. The present position is that all Government Departments including the Army Departments and Army Headquarters and R. A. F. Headquarters have their offices in the new City buildings on which the builders are completing the final details. The Members of H. E. the Viceroy's Executive Council including H. E. the Commander-in-Chief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The

Government of India have recently devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid April and bringing it down from Simla again in mid October. The experiment was not very successful and has not been repeated.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the picture was to be drawn out and painted to full size on canvas, and if finally approved by the Committee fixed according to the marouflage process *en situ*. Other techniques such as fresco or tempera, were optional. Artists or schools of art who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones and English artists living in India were barred from competition the work being strictly reserved to Indian artists. Numerous artists submitted designs especially those of Western India and with such satisfactory results that the specially appointed expert Committee approved of nearly all. A great deal of painting has now been completed and the work is continually progressing. Government meanwhile, launched a scheme for sending selected artists to Europe for finishing studies to enable them the better to join in the work and under the scheme students are now in England.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. The following resolution was carried:—“The Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable.”

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla,

moved a recommendation to Government to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year. This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

H R H the Duke of Connaught, on 12th February, 1921, laid the foundation stone of a large group of parliamentary buildings on a site close to the south-east of the Secretariate. The building is an imposing pile circular in shape consisting in the main of three horse shoe shaped Chambers for the Chamber of Princes, Council of State and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

H E the Viceroy (Baron Irwin) proceeded in state to the new Legislative buildings henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The Indian legislature began its sessions in them next day.

During 1923 official and public attention became focused on the need to effect drastic improvements in some of the crowded areas of the old city and to provide for its expansion and for suburban developments. This led to the examination of the possibilities of the area lying between the old and new cities and of the desirability of driving connecting roads through the City walls in order to give access outwards in this direction. The old city is now rapidly expanding in a westerly direction i.e. towards and up the Ridge which runs behind both cities and the spaces between the two cities are being developed and utilised.

All India War Memorial—H R H the Duke of Connaught on 10th February 1921 laid the foundation stone of an All India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. It is now practically complete.

The Memorial takes the form of a triumphant arch spanning Kingsway the avenue running down the centre of the Vista. It is generally similar to the Arc de Triomphe in Paris but is simpler in a way which will probably increase its grandeur and dignity. The monument reaches a height of 180 feet and the inner height of the arch is 87 feet 8 inches and its breadth 70 feet. Over the arch on both fronts appears in capital letters the single word INDIA and this is flanked on each side by the initials MCM (i.e. 1900) whilst immediately below them on the left hand are the initials XIV (i.e., 14) and on the opposite side the figures XIX (i.e. 19) above

the Arch is a circular stone bowl 11½ feet in diameter. This is intended to be filled with burning oil on great anniversaries and other occasions so that there will be shining fire by night and a column of smoke by day. The memorial is solely Indian in purpose and bears the names of Indian regiments only.

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still under consideration. To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary teaching and residential university of Delhi the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was therefore decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H E the Viceroy would be able to lay the foundation stone of the university buildings in November 1923, but this proved impracticable. The site for the new buildings required has not yet been settled. Government and the University Authorities are examining this point in consultation particularly with reference to the question whether to build in the new capital or to utilise buildings that may become available elsewhere. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the present the University is housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until last year.

H E the Viceroy on 10th January 1930 laid the foundation stone of a large European and Indian General Hospital to be built in the course of the next few years at a cost of Rs. 75 lakhs for the services of both old and new cities. A portion of the scheme will at a cost of Rs. 40 lakhs be executed as a first stage during the ensuing two years. This will provide 224 beds and the necessary laboratories and administrative and residential quarters. The second stage will provide another 110 beds. The hospital is situated between the old and new cities.

Freemasonry in India.

In 1788 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret, Esq., authorising him to "open a new Lodge in Bengal. Of this personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, Lodge was established in 1790, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Ezek. Gee, who held office in 1790 after whom came the Hon. Roger Drake, appointed 18th April 1795. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Daulah in 1756. Drake missed the honors of the Black Hole by escaping and was accused of deserting his post, but, though present at the taking of Calcutta by Admiral Watson and Oliva, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1790, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Oullin Smith was appointed P. G. M. in 1792. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. elect) in 1797 but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrers in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indianman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed, October 31st, 1798, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of P. G. M. Unfortunately the records of the P. G. L. date back only to 1774 and thus much valuable information is lost to us. This Grand Lodge continued working until 1798 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1818 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 233) was established in Madras in 1788. Three others were also established about 1788

In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1798 the Athol (or Ancients) invaded this District and in 1799 established a Provincial Grand Lodge and both these Provincial Grand Lodges continued working peaceably side by side until the union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1818 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul Umra who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed. This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1768, both of which were carried on the lists until the union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 522) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Morley was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to install him after being duly passed and raised a Deputy Grand Master of the Decan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1828 a Military Lodge 'Orion-in-the-West' was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, alien in the opinion of some of its members, who obtained a warrant, on the recommendation of the parent Lodge, from the Grand Lodge of England two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No 818 in 1838. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded but in 1839 Dr James Burnes was appointed by the Grand Lodge of Scotland, F G M of Western India and its Dependencies No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that the appointment was not to act in restraint of any future sub-division of the Presidency. Burnes may be best described as being in 1836, in sociological phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1846 when a Lodge St. George No 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burnes established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Frithnopoly in 1774 by the initiation of Umdat-ul-Umara has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of

Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

T H Keyes " Eastern "
A Briggs " Eastern "
The Grand Secretary is E W Bro J C. Mearns,
J P, 17, Mursban Road, Fort, Bombay

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, viz. English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year two other Lodges have sprung into being.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are ten Lodges, 4 in Calcutta 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under —

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M E Camp A. M. Kaj'i under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts, but in most cases the District Grand Master is also District Grand Mark Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. O. Lodges, but chiefly in R. A. Chapters, in which the Excellent R. A. M. and other degrees can be obtained. S. O. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt Wor Master in S. O. Craft does not recognise the ceremony of R. A. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate chapters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of District Grand Secretaries are given below —

D G S, Bengal

J H Simpson, 19, Park Street, Calcutta

D G S, Bombay

Khan Bahadur Palanji N. Datar P.A.G.R.,
P.D.G.W., Freemasons' Hall, Ravelin Street
Fort Bombay

D G S, Burma

E. Mayer D.G.S., E.C., Rangoon

D G S, Madras

S. T. Srinivasa Gopala Chari, Freemasons
Hall, Egmore, Madras

D G S, Punjab

G. Reeves Brown, Freemasons' Hall, Lahore

Scottish Constitution.—For information regarding the Benevolent Funds application should be made to Jehangir C. Mistree, J.P., 17 Mureban Road Bombay

Scientific Surveys.

Zoological Survey—A scheme for the formation of a Zoological Survey on the basis of the Zoological and Anthropological Section of the Indian Museum, Calcutta, came into force in July, 1916. The proposals as sanctioned by the Secretary of State mainly are as follows:—The headquarters of the Survey will be the Indian Museum. The scheme regarding the Zoological Survey entails the breaking up of the organisation now known as the Zoological and Anthropological Section of the Indian Museum into two parts, one of which will become a Government department under the title of the Zoological Survey of India, and will be primarily concerned with zoological investigation and exercise such advisory functions as may be assigned to it by Government, while the other part will remain as the office of the Trustees of the Indian Museum and will be organised for the present on the lines laid down in the existing by-laws of the Museum. It will be the duty of the Zoological Survey to act as guardians of the standard zoological collection of the Indian Empire, and as such to give every assistance in their power both to officials and to others, in the identification of zoological specimens submitted to them, arranging, if requested to do so, to send collections to specialists abroad for identification in cases in which no specialist is available in India. The Zoological Survey is also responsible for the Anthropological and Ethnological collections in the Indian Museum and in 1927 the additional appointment on the Staff of an anthropologist was created. The Director of the Survey was Dr Anandiah until April 1924 when he died—within a month of receiving the honour of Fellowship of the Royal Society. Dr Bansi Prasad was appointed Acting Director in his place and continued in that capacity until July, 1925, when Lt-Col R. B. Sowell M.S. A. F. A. S. B. F. L. S. F. Z. S., was made Director.

Mammal Survey—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India the primary object of the Survey being the furtherance of our knowledge of Indian *Mammalia* Fauna. Up to 1891 Naturalists in India had to rely for information on Dr Jerdon's *Mammals of India* published in 1874. In 1884 E. A. Steadale published his *Natural History of Indian Mammals* a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr Slater, Hon. Secretary to the Zoological Society and signed by Darwin, Hooker, Huxley and other well known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of volumes dealing with the Fauna of India should be prepared and Dr Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the *Volume on Mammals* in the "Fauna of British India" Series and since 1891 this volume has been

the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum, the Bombay Natural History Society decided to institute what is now known as the Mammal Survey, Mr W. B. Millard, then Hon. Secretary of that Society issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the *mammals of India, Burma and Ceylon*. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920 partly by subscriptions from the Society's members, contributions from Indian Princes and grants from the Indian Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country, the districts covered being—in Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar, the Southern Maharatta country and Kanara in Southern India, in Coorg and Mysore, in the centre large tracts of the Central Provinces and some districts of Bengal and Behar. In Northern India the Society's collectors had worked over Kumaon, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river in Central Burma and in the Shan States, Pegu and a portion of Tenasserim. The whole of Ceylon was also systematically surveyed.

The material which up to the outbreak of War comprised some 17,000 specimens, was forwarded to the British Museum where the collections were scientifically worked out by the late Mr R. C. Wroughton, formerly Inspector General of Forests, Mr Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammals has enabled the revision of Blanford's *Mammals* to be undertaken and early in 1921 the Secretary of State for India commissioned Mr R. C. Wroughton, since deceased, and Mr M. C. Hinton to undertake the work.

When demobilisation rendered it possible the work of the Survey which had been in abeyance during the war was resumed and a collector Mr O. Primrose, was sent to Assam and the Mergui Archipelago and Mr Oldfield Thomas has written very appreciatively of his work among those islands. Mr Primrose then began

working inland but owing to the impracticability of continuing his work in Burma during the monsoon, he was transferred to Gwalior where II H the Maharaja kindly accorded permission to work in his territories.

After working a portion of the Eastern Ghats the next move was to the Kangra District in the North West Himalayas and then on to the Punjab Salt Range. Two other collectors worked in Southern India. Permission was once more obtained from the Nepal Government for a collector to resume the Survey work in that country. The work in Nepal was brought to a successful close early in 1928 with a representative collection of interesting mammals and birds.

The Survey now has only one collector who is collecting in the foot hills of Himalayas and the Pindari Valley.

Botanical Survey.—The Botanical Survey Department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden, Calcutta. There is a staff at headquarters of two officers for systematic work and at the Indian Museum a curator who is engaged in the development and maintenance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma of quinine manufacture in Bengal and of the distribution of cinchona products to the Government of India's area of distribution in Upper India. The question of the extension of cinchona cultivation in the Indian Empire has of late years formed a subject of interest to several bodies including the League of Nations Health Section. The Royal Commission on Agriculture recommended that India should be made self-sufficient in the matter of quinine production. Attempts are now being made to overcome the financial and other difficulties hindering the ready use of quinine through India. The cinchona operations directly under the Government of India are for the present confined to the Tenasserim district in Lower Burma, where a large tract of country is held in reserve. Considerable success has already been achieved with the crop and it has been established that cinchona will grow in this area and that it can be grown at some profit but indications here, as elsewhere in India point to the inadvisability of leaving production subject to the vagaries of the climate in one area and, generally, of localising effort. Other areas in Burma and in Assam seem suitable for this cultivation and await experimental proof, when the present financial and other obstacles to cinchona development have been overcome.

The actual demand for the drug in India is difficult to estimate. Eight million cases of malaria fever go to the hospitals and dispensaries every year. If each of these is treated with 110 grains of quinine, which may be taken as the minimum for the cure of a paroxysm, the demand for hospital and dispensary treatments alone would be 125,000 pounds a year. Patients do not get as much of the drug as they ought, because the cost of quinine is prohibitive. It is estimated that there are 100,000,000 sufferers from malaria who do not attend the hospitals. The potential demand is therefore somewhere between 125,000 pounds and 1,500,000 pounds.

When the Italian Government, in 1908 made quinine a State industry and cheapened its retail price consumption in that country enormously increased and malaria mortality was reduced from 15,000 to 8,000 a year. The Public Health Commissioner with the Government of India says in a recent report that 'it may be said that there is no question of the effective treatment of malaria in India until consumption of quinine approximates 500,000 pounds'.

Survey of India.—The work of the Survey of India falls under various heads, namely trigonometrical, topographical and forest surveys, special surveys and explorations, and map reproduction. Cadastral surveys are now chiefly carried out by the Provincial Land Records and Settlement Department but are in some cases supervised by Survey of India officers.

The land survey and mapping of British India have advanced with the acquisition of territory they commenced when the first battles were fought, and the first province gained. James Rennell who distinguished himself as a midshipman at the siege of Pondicherry and afterwards rose to the rank of Major in the army may be said to be the father of Indian geography and he was made Surveyor of the East India Company's Dominions in Bengal by Lord Clive on the 1st January 1767. The Great Trigonometrical Branch now termed the Geodetic Branch, was originated by Col. W. Lambton, who was first Superintendent—from 1800 to 1823. He was followed in that capacity by one of the best known Surveyor Generals of India viz. Sir George Everest who was head of the Department from 1830 to 1843.

In 1904 a Committee was appointed to examine the methods and working of the Survey of India with special reference to the preparation or revision and reproduction of the topographical maps of the country to overtake the errors of revisional survey and to secure that the map of India should be brought up to date and revised at proper intervals. A considerable increase of establishment was recommended and a programme for 25 years work was drawn up. Certain scales were determined, which however were from time to time modified, but the scale of 1 to 1 mile as the general standard or the whole of India was accepted. The work of the department has in recent years greatly been hampered by the general need for retrenchment and expenditure, and owing to the fact that a very large proportion of the members served throughout the Great War in various capacities on various fronts little more than half of the programme which it was hoped would be completed by 1930 has been done and this in spite of the reduction of the scale of Survey for less important areas. Thus although new surveys covering an area about equal to that of England are carried out every year, the maps of one-third the country are still very old and only roughly kept up to date by means of rather perfunctory information supplied by local officials. The old maps are also about 2 miles out of position, being based on a longitude of Madras determined in 1816. On the other hand, the department's organisation has recently been improved by the creation of a new North-West

Frontier Circle under a separate Directorate, the special functions of which are to deal with the requirements of the Army for operations in that area. This is in addition to the four already existing Circles for all India and Burma.

The Department is responsible for all topographical survey, for explorations and the maintenance of geographical maps of the greater part of Southern Asia for geodetic work including the main trigonometrical framework which extends in some cases far beyond the frontiers of India, and control networks of precise levelling based on tidal observations, tidal predictions and the publication of Tide Tables for nearly 40 ports between Bues and Singapore. The Magnetic Survey, astronomical observations with seismographic and meteorological records at Dehra Dun, and geodetic investigations of an international character, in regard to which India enjoys a unique position between the greatest highlands of the world and a deep ocean extending to the Antarctic. Indian geodesy has thus disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have led to some of the most important developments of modern geodetic research.

While expending on topographical and geodetic work all funds allotted by Imperial Revenues the Departments is steadily developing the policy of aiding local surveys in various ways, on payment by those concerned. These miscellaneous operations include all forest and cantonment surveys and work for Boundary Commissions, many riverain irrigation railway and city surveys and surveys of tea gardens, mining areas etc with a great deal of control levelling for them. Miscellaneous administrative assistance and officers are given to the revenue surveys of various Provinces and States. The Printing offices do much work for other Government departments, such as printing special maps, illustrations for Archaeological Reports, all diagrams for Patents &c. The Mathematical Instrument Office gives valuable aid to all Government departments by ensuring a high standard of instrumental equipment especially in connection with optical work, and by the manufacture and repair of high-class instruments, which would otherwise have to be imported from abroad.

The Department is also responsible for all survey operation required by the Army and has rapidly been developing measures to meet the greatly increased complexity of modern military requirements, especially in connection with air survey. The development of air surveys for various civil purposes is also receiving all possible encouragement and assistance while the latest methods of stereo-photograph are being studied experimentally.

Administration is by the Surveyor General under the Education Health and Lands Department of the Government of India. Head quarter offices are at Calcutta under the Assistant Surveyor General.

There are seven Directors, including the Director Map Publication who is administrative charge also of the Photo Litho Office and the Mathematical Instrument Office, at Calcutta, and the Director, Geodetic Branch,

at Dehra Dun. For topographical purposes India is divided into five Circles, each under a Director as follows:—Frontier Circle, which deals chiefly with the Army, has Headquarters at Simla. Central Circle Headquarters Mussoorie, Eastern Circle, Headquarters Shillong, Southern Circle Headquarters Bangalore and Burma Circle Headquarters Mawmya. Any inquiries regarding surveys may be addressed either to the Headquarters office or any of the Directors concerned, from whom also maps and publications of the Survey of India can be obtained as well as from the Map Sales Office, situated at 13 Wood Street Calcutta.

Indian Science Congress—The Indian Science Congress was founded largely owing to the efforts of Prof P. S. MacMahon and Dr J. L. Simonson. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science, for this and the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress which is progressive and vigorous, meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress, the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research, when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association—This Association which is a much older body than the National Research Council in England, was constituted in 1911 with a sum of rupees five lakhs (£38 000) set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organised medical research on a large scale and has been referred to by other countries in very complimentary language. Still better, it has been copied by several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India. It was considered that, in view of the largely increased activities of this Association, the

Governing Body which had hitherto most expeditiously and economically conducted the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist. The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consultative Recruitment Board in England also came under the consideration of Government. It was further decided that the Governing Body of the Indian Research Fund Association should be the co-ordinating agency for the research activities of the All India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute.

The Conference of Medical Research Workers held its seventh annual meeting in Calcutta in December 1929. This Conference of Research Workers which is drawn from all parts of India and consists of experts in their particular lines of research, discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Board of the Indian Research Fund Association in making their recommendations for the programme of the following year. The Advisory Board also met in December and examined all the proposals for research work and recommended a scheme of research for the guidance of the Governing Body of the Indian Research Fund Association.

The control and management of the Association are vested in a Governing Body the President of which is the Member in charge of the Department of Education, Health and Lands, Government of India. The Governing Body is assisted by a Scientific Advisory Board of which not fewer than three members have seats on the Governing Body. The function of the Board is to examine all proposals for work in connection with the objects of the Association and to report on their importance and feasibility to the Governing Body.

The main income of the Association is an annual grant from the Government of India. The grant amounted to Rs. 5,00,000 per annum up to the year 1922-23 when owing to financial retrenchment it was discontinued. This would have caused the cessation of the activities of the Association but for the fact that a portion of the annual grant had been placed in a capital account which at that time was yielding interest sufficient to continue the Association on a much reduced scale. With a renewed grant in 1925-26 of Rs. 3,00,000 and later a restored grant of Rs. 5,00,000, the activities of the Association again came into full swing. Owing to a revised method of showing the grant in the budget of the Government of India, the figure has been raised to Rs. 74 lakhs so as to include the pay and allowances of ten officers of the Medical Research Department who ordinarily work under the Association.

A donation of Rs. 5,000 entitles the donor to a permanent seat on the Governing Body, while every subscriber of Rs. 100 per annum can be a temporary member. Members of the Association are entitled to attend and take part in the annual general meeting of the Association and to receive copies of reports and other publications issued from time to time by the Association.

The official organ of the Association is the Indian Journal of Medical Research which has a wide international circulation. The Association also publishes Indian Medical Research Memoirs which are supplementary to the Journal.

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings. The Association in 1929-30 financed 48 enquiries in the field of medical research at an estimated cost of Rs. 10,50,824. These included investigations into various aspects of malaria, plague, cholera, anti-rabic vaccines, kala-azar, leprosy, helminthological and nutritional diseases, tuberculosis, bacteriophage and its uses for the treatment and prevention of dysentery and cholera, maternal mortality, morbidity in child birth, anaemia of pregnancy in India, determination of haemoglobin in health and in anaemia, causation of foetal and maternal dystocia in India, sprue, indigenous drugs, drug addiction, skin diseases, diabetes, the blood changes occurring in certain tropical diseases, spirochaetosis, transmission, study of the histology of the spleen and the bone marrow, filariasis, guinea-worm disease, relapsing fever, osteomalacia, secretion and composition of gastric juice in Indians, anthropological inquiry regarding determination of age for medico-legal purposes and several minor inquiries on other diseases.

The principal inquiries are the Malaria Survey of India, which is a Central organisation, located at Kasauli and Karnal; plague research at the Haffkine Institute, Bombay; kala-azar by a commission in Assam; bacteriophage by Dr. Asheshov at Patna; nutritional research by Colonel McCarrison at the Pasteur Institute; conour and indigenous drugs and drug addiction by Lt. Col. Chopra at Calcutta.

The Malaria Survey of India, which now enjoys international recognition, is constantly called upon to advise as to the best methods for malaria prevention in India. As part of the activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the Records of the Malaria Survey of India of which up to date four numbers have been issued.

The programme for 1930-31 consisted of 44 enquiries chiefly on the diseases above enumerated. It is proposed that the work of the Kala-azar Commission in Assam should be carried on as an enquiry into the cause, method of transmission, cure and prevention of kala-azar conducted by Dr. Napier of the School of Tropical Medicine and Hygiene, Calcutta. It is also proposed to institute a Cholera Commission which will investigate the various aspects of the disease.

Owing to the generosity of the Rajah of Parikimedi, who gave a lakh of rupees as a donation for the purpose, the Parikimedi Trust was constituted during the year. This Trust establishes two scholarships for training in nutritional work under the Director of Nutritional Research, Bombay. The Trust itself will be administered with the help of a committee, by the Indian Research Fund Association. The Rajah of Parikimedi was elected a life member of the Governing Body of the Association.

The Rock-feller Foundation generously offered \$648,000 to meet the non-recurring cost of building and equipping an All India Public Health Institute at Calcutta, provided that the Government of India placed its management under the control of the Governing Body of the I. R. F. A. and guaranteed to provide adequate financial support for its maintenance by an annual recurring grant of about \$4 lakhs. The Government of India agreed to these conditions and the Indian Research Fund Association under whose control the money was placed have made arrangements for the acquisition of the land. The building is now being constructed and it is expected that the Institute will be opened early in 1932.

Geological Survey—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of

information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are published without delay and every endeavour is made to induce private firms to take up the exploitation of the mineral. Discovered collections of minerals, rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of an anthropoid ape of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel to the Himalayas at a short distance below the foot hills of the latter and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineering problems connected with the selection of sites for dams, for reservoirs, the safety of hill slopes and the suitability of particular building stones for particular purposes. The Department is also often able to advise on problems connected with the supply of water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the natural resources of the country. The Geological Survey also undertakes the examination and identification without fee, of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Palaeontologia Indica. The Survey headquarters are in Calcutta.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director General of Posts and Telegraphs who works in subordination to the Government of India in the Department of Industries and Labour. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of three Deputy Directors-General, and six Assistant Directors-General (whose status is similar to that of Deputy Postmasters-General).

For postal purposes, the Indian Empire is divided into nine circles as shown below, each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director Posts & Telegraphs, Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways and inland steamers. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General. The nine Postal Circles are divided into Divisions each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head quarters of each revenue district and other post offices in the same district are usually subordinate to the head Office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmaster General. The Presidency Postmasters, indeed, have one or more Superintendents subordinate to

them. When the duties of the Postmaster or a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The Inland Tariff (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows —

	When the postage is prepaid	When the postage is wholly unpaid	When the postage is insufficiently prepaid.
<i>Letters</i>	<i>Anna.</i>		
Not exceeding two and a half tolas	1	Double the prepaid rate (chargeable on delivery)	Double the deficiency (chargeable on delivery)
Every additional two and a half tolas or part of that weight	1		
<i>Book and pattern packets</i>			
Every 5 tolas or part of that weight	1		

Post Office Tariffs.

609

Postcards.

Single	1 anna.
Reply	1 "

(The postage on cards of private manufacture must be prepaid in full)

Parcels (prepayment compulsory)

(a) Parcels not exceeding 440 tolas in weight —

Not exceeding 20 tolas	Rs 2
Exceeding 20 tolas but not exceeding 40 tolas	0 2
For every additional 40 tolas or part of that weight	0 3
	3 annas

(b) Parcels exceeding 440 tolas in weight —
Exceeding 440 tolas but not exceeding 480 tolas Rs 3 0
4 annas for every additional 40 tolas or fraction thereof up to 800 tolas

Registration is compulsory in the case of parcels weighing over 440 tolas. These rates are not applicable to parcels for Portuguese India.

In the case of parcels for Ceylon a registration fee of 2 annas is chargeable on each parcel in addition to the rates shown above

Registration fee

For each letter, postcard, book or pattern packet, or parcel to be registered 0 2

Ordinary Money Order fees

On any sum not exceeding Rs 10	0 2
On any sum exceeding Rs 10 but not exceeding Rs 25	0 4
On any sum exceeding Rs 25 up to Rs 600	0 4

for each complete sum of Rs 25 and 4 annas for the remainder, provided that, if the remainder does not exceed Rs 10, the charge for it shall be only 2 annas

Telegraphic money order fees — The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an 'Express' or as an 'Ordinary' message.

In the case of Ceylon the telegraph charge is calculated at the rates shown below —

Express — Rs. 2 for the first 12 words and 3 annas for each additional word

Ordinary — Rs 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India

Value-payable fees — These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders

Insurance fees — For every Rs 100 of insured value 2 annas

As regards Portuguese India see Foreign Tariff

Acknowledgment fee — For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon or to Portuguese India except in res-

pect of insurance fees for parcels and parcel postage) is as follows —

Letters

To Great Britain and Northern Ireland other British Possessions and Egypt, including the Sudan.

2 annas for the first ounce and 1½ annas for each additional ounce or part of that weight.

To other countries, colonies or places.

3 annas for the first ounce and 1½ annas for every additional ounce or part of that weight

Postcards, Single 1½ annas.
" Reply 3 annas.

Printed Papers — 1 anna for every 2 ounces or part of that weight

Business Papers — For a packet not exceeding 12 ounces in weight 5 annas

For every additional 2 ounces or part of that weight 1 anna

Samples — 1 anna for first 1 ounce and 1 anna per 2 ounces thereafter

Parcels

(1) Parcels not exceeding 20 lbs in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows. —

Via Over Gibraltar land

For a parcel —	R s a p	R s a p
Not over 3 lbs	1 6 0	1 13 0
Over 3 lbs, but not over 7 lbs	2 12 0	3 3 0
" 7 "	3 15 0	4 6 0
" 11 "	4 20 "	5 3 0
" 20 "	5 8 0	7 0 6

These parcels are delivered by the post office and the postage paid carries them to destination

(2) Parcels which exceed 11 lbs but which do not exceed 50 lbs (the maximum allowed) in weight are forwarded from India through the medium of the P & O N Co and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound or fraction of a pound. The parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London, if addressed to any place beyond that radius, carriage charges are levied from the addressee on delivery. Parcels thus forwarded through the P & O N Co cannot be insured during transit beyond India, but must, if they contain coin, etc be insured during transit to India. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value-payable system.

Limits of Weight.*Letters*—4 lbs. 6 oz*Printed Papers and Business Papers*—To Great Britain and Northern Ireland, and the Irish Free State, British Australasian Colonies, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—No limit.

To all other destinations—4 lbs. 6 oz.

Samplers—To Great Britain and Northern Ireland, and the Irish Free State, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—6 lbs.

To Ceylon—200 tolas.

To all other destinations—1 lb 2 oz

Parcels—11 lbs. or 20 lbs**Limits of Size***Letters*—1½ feet length by 1½ feet in width or depth. If in form of roll, 2½ feet in length and 4 inches in diameter*Printed Papers and Business Papers*—To Ceylon—2 feet in length by 1 foot in width or depth.

To all other destinations—1½ feet in length by 1½ feet in width or depth.

If in form of roll, dimensions in all cases are 30 inches in length and 4 inches in diameter

Samplers—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hong kong, the Straits Settlements, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth.

To all other destination—1½ feet in length by 8 inches in width and 4 inches in depth.

If in form of roll, dimensions in all cases are 1½ feet in length and 6 inches in diameter

Money Orders—To countries on which money orders have to be drawn in rupee currency, the rates of commission are the same as in the case of inland money orders.

To countries on which money orders have to be drawn in sterling, the rates are as follows—

	Rs a
On any sum not exceeding £1	0 3
" , exceeding £1 but not exceeding	
" £2	22 0 5
" £3	23 0 8

On any sum exceeding £3	Rs a.
but not exceeding £4	0 10
" " £4 " " £5	0 12
" " £5 " " £6	0 12

for each complete sum of 45 and 12 annas for the remainder, provided that if the remainder does not exceed 41, the charge for it shall be 3 annas, if it does not exceed 42, the charge for it shall be 5 annas, if it does not exceed 43, the charge for it shall be 8 annas, and if it does not exceed 44, the charge for it shall be 10 annas.

*Insurance fees (for registered letters and parcels only)**For insurance of letters and parcels to Mauritius, Iraq, British Somaliland, the Seychelles, and of parcels to Zanzibar and Portuguese India*

Where the value insured does not exceed Rs. 150

For every additional Rs 150 or fraction thereof

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not exceed £12

For every additional £12 or fraction thereof

Adm. solely sent fee—8 annas for each registered article.**Magnitude of business in Post Office—**

At the close of 1929-30 there were 114,812 postal officials, 23,888 post offices, and 168,114 miles of mail lines. During the year, 1,382 million articles, including 55 million registered articles were posted stamps worth Rs. 66 millions were sold for postal purposes over 40½ million money orders of the total value of Rs. 941 millions were issued, a sum of Rs. 287 millions was collected from tradesmen and others on V P articles, over 56 million insured articles valued at 1,599 millions of rupees were handled Customs duty, aggregating over 84 million rupees was realised on parcels and letters from abroad, pensions amounting to Rs 158 millions were paid to Indian Military pensioners and 14,592 lbs. of quinine were sold to the public. On the 31st March 1930, there were 2,304,904 Savings Bank accounts with a total balance of Rs. 371 millions and 71,478 Postal Life Insurance policies with an aggregate assurance of Rs. 186½ millions.

TELEGRAPH DEPARTMENT

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principle of this scheme which followed closely the system in force in the United Kingdom and several other European countries was that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the

Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs in charge of the two Circles. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was accomplished by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer Telegraphs, with one Dy Chief Engineer For tram work there is a Deputy Director-General, with an Assistant and an Assistant Director General. On the 27th March 1930 a Controller of Telegraph Traffic was appointed to assist the Deputy Director-General in the inspection of offices and in controlling telegraph traffic in the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circles were formed with its headquarters at Karachi. The circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work on the lines of the Burma Circle the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was completed in March 1930.

The telegraph traffic work is under the control of the Postmasters-General, each of whom is assisted by a Deputy Postmaster-General and a suitable staff of attached officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff—Telegrams sent to or received from places in India or Ceylon are classed as inland telegrams. The tariff for inland telegrams is as follows —

	For delivery in India		For delivery in Ceylon	
	<i>Private and State</i>		<i>Private and State</i>	
	Ex- press.	Ordinary	Ex- press	Ordinary
	Rs. a	Rs. a	Rs. a	Rs. a
Minimum charge	1 0	0 12	2 0	1 0
Each additional word over 12	0 2	0 1	0 3	0 2

The address is charged for

Minimum for reply-paid telegram		Additional charges.		Minimum charge for an ordinary telegram.	
Notification of delivery		Minimum charge for a telegram of the class (ordinary or Express) prescribed by the sender		100 words	
Multiple telegrams, each or less		4 annas.		One half of the charge for an ordinary telegram of same length	
Collation		Rs.		If both the offices of origin and destination are closed	
For acceptance of an Express telegram during the hours when an office is closed		2		If only one of the offices is closed	
		1		If the telegram has to pass through a ny closed intermediate office an additional fee in respect of each such office	
Signalling by flag or semaphore to or from ships—per telegram		1		The usual inland charge plus a fixed fee of 8 annas	
Boat hire		Amount actually necessary			
Copies of telegrams each 100 words or less		4 annas.			
From telegrams		For delivery in India		For delivery in Ceylon.	
		Ex press.		Ex press	
		Rs a.		Rs. a.	
		1 0		8 1 0	
Minimum charge		Ordinary		State	
Each additional 5 words over 48 in respect of India, each additional four words over 32 in respect of Ceylon		Rs a.		(British Govt)	
The address is free		0 2 0 1 0 2			
Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to countries in Europe are as follows —					
		Ordinary		State	
		Urgent		(British Govt)	
		Rs. a.		Rs. a.	
All countries in Europe (except France)		Rs. a.		Rs. a.	
via Eastern		3 0 1 0 0 8 0 8			
Great Britain and Northern Ireland		— 0 12 0 5 0 6			
via I.B.T.		— 1 0 0 8			
Most other countries in Europe via I.B.T.		— 1 0 0 8			

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is ten annas per word in nearly all cases.

The following are the charges excluding supplementary charges for radio-telegrams from Offices in India or Burma transmitted to ships at sea from the coast stations mentioned in the preceding paragraph—

	Total charge per word
	Rs. a.
(1) All Government or Private Radio-telegrams, excepting those mentioned in (2) to (4) below	0 10
(2) British, Indian or Colonial Government Radio-telegrams to His Britannic Majesty's Ships of War or Royal Indian Marine Ships	0 6
(3) Private Radio-telegrams to His Britannic Majesty's Ships of War	0 6
(4) Radio telegrams to Spanish or Swedish ships	0 9

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction R P followed by mention in Rupees and annas of the amount prepaid e.g. R.P. 7-8 This expression counts as one word.

DAILY LETTER-TELEGRAMS

Daily Letter-Telegrams in plain language, which are dealt with telegraphically through out are accepted on any day of the week excluding Sundays and telegraph holidays, and are ordinarily delivered to the addressee after forty-eight hours. They are subject to the conditions prescribed for Deferred Foreign Telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily a quarter of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 20 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

In the Daily Letter-Telegram service the special instructions relating to prepayment of replies are admitted other special services are inadmissible in DLT Telegrams.

Packed messages, i.e., messages intended to be communicated to different persons are not accepted in the text of Daily Letter-Telegrams.

The charge for a week-end letter telegram to Great Britain and Northern Ireland is 3 annas a word via Eastern and 2½ annas a word via I.R.T. subject to a minimum charge for 20 words per telegram including the indication WLT.

Week-end Letter Telegrams accepted on Saturday or any previous day of the week for delivery on the following Monday—2½ annas per word for Great Britain and Northern Ireland.

Daily and Week-end Letter Telegrams—Minimum charge for 20 words.

Ordinary rate telegrams may be written in code.

Telegrams are accepted at all Government Telegraph Offices.

Equal rules apply regarding Registration Reply Paid etc.

Full lists published in Posts and Telegraphs Guide.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,688 miles of wire and cable, as compared with 104,812 miles of line including cable and 568,445 miles of wire including conductors respectively, on the 31st March 1900. The numbers of departmental telegraph offices were 257 and 125 (including 17 Radio offices),

respectively while the number of telegraph offices worked by the Post Office rose from 1,684 to 4,221.

The increase in the number of paid telegrams dealt with is shown by the following figures —

		1927-28.	1929-30
India	{ Private	4,107,270	14,088,890
	{ State	860,332	1,121,028
	{ Press	35,910	505,450
Foreign	{ Private	735,875	3,098,287
	{ State	5,994	34,527
	{ Press	5,276	78,549
		5,754,415	19,476,184

The outturn of the workshops during 1929-30 represented a total value of Rs 21 44 677.

Wireless.—The total number of Departmental wireless stations open at the end of 1929-30 was twenty-six viz., Allahabad, Bombay, Calcutta, Delhi, Diamond Island, Jodhpur, Jullough Karachi, (two stations), Lahore, Madras (6 stations), Mhow, Nagpur, Peshawar, Poona, Port Blair, Quetta, Rangoon (3 stations), Sand heads (two pilot-vessels), Secunderbad, and Victoria Point of which only Port Blair and Victoria Point booked telegrams direct from the public.

The Duplex high-speed service between Rangoon and Madras continued to work satisfactorily, the wheat stone system being employed generally for this circuit. Communication with the Imperial Air Mail Aeroplanes is maintained during flight by Karachi Radio between Karachi and Jask.

Telephones.—On the 31st March 1930 the number of telephone exchanges established by the Department was 291 with 18,786 straight line connections and 3,024 extension telephones. Of these exchanges, 156 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 23 with 35,001 connections.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1930 was 14,459.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year ended 31st March 1930 was Rs 45,74,789 and Rs 14,54,86,090 respectively. The receipts for the year ended 31st March 1930 amounted to Rs 11,29,49,833 and charges (including interest on capital outlay) to Rs 11,91,94,164 the result being a net loss Rs 62,44,581.

Sanitation.

The history of the sanitary departments in India goes back for about fifty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places but the village house is still often ill ventilated and ever vomited the village site dirty, crowded with cattle, choked with rank vegetation and poisoned by stagnant pools and the village tanks polluted, and used in indiscriminate for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised.

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914 the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India May 23rd 1914*) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 476 et seq.) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the

provinces making it a subject directly responsible to local control through Ministers. It is yet too early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January 1923, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded that the State effort in regard to Health Organisation in British India is one of no mean importance that it has evolved over a couple of centuries during which many mistakes in policy must be admitted that it has provided the Officers and the stimulus necessary for having the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in which ever way it is regarded it is an effort of which no Government need be ashamed. He quoted the remark of the Government of India in their Resolution of 1914 that "In the land of the ox cart one must not expect the pace of the motor car."

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fair way to maturing but that in other provinces with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed. But, he says "though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian

community is thinking seriously on these public health problems—amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention.

India's birth rate in 1925 was nearly twice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 2½ times that of England and Wales and nearly 4½ times that of New Zealand. The information furnished for the great group of infectious diseases of world import, i.e., plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera. The significance of these facts must, adds the Commissioner be obvious to all who think. Belying their implication is that India a house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children, of the effect of feeding on rickets scurvy and beriberi of the way in which malaria, cholera, yellow fever, dengue, ankylosis, typhoid and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation.

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December, 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no public health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of Health and of such an Act

is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

The Commissioner in his annual report to Government for 1927 gives at the outset the following text for thought: Whether the institution of a Ministry of Health, which many of us think is long overdue for the Indian Empire, would accelerate progress of a matter of opinion, but there can be little doubt that such progress must depend not on a haphazard programme or on the fulfilment of an annual routine of measures sanctified by tradition but rather on the acceptance of such cardinal principles as have been laid down by the Chief Medical Officer of the British Ministry of Health in his 1927 report and by a genuine attempt to work to these. Sir George Newman points out that "Nothing is more certain than the fact that the physical advancement and health of mankind is dependant not upon a doctor's stunt here or a sanitary institution there but upon the whole social evolution of the people. Now, these desired ends are not reached merely by assuming them, still less by leaving things to chance, drift or fate. They can in any case only be partly reached at all without foresight, organisation and expenditure. He proceeds to inculcate four basic principles which it is necessary for any modern State to work to and which are as follows:

- (a) ascertainment and accurate registration of the data obtainable,
- (b) the establishing of a definite standard to work to which should be based on health and physiology and not on disease or pestilence,
- (c) the study of the character and incidence of disease, its causes and predisposing conditions, its mode of spread, its social factors which increase or reduce it and the means of its treatment and prevention,
- (d) the establishment of a national organisation by the assent of public opinion, such organisation being an index of the aspirations and enlightenment of the people.

It is for consideration how far we in India are now working to these basic principles or are likely to in the future and whether our existing public health organisation is best suited to enable us to do this."

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report—

Province	Birth Rates (per mille).		Death Rates (per mille)	
	1928	Previous 5 years	1928	Previous 5 years
Delhi	48.31	41.52	29.21	34.86
Bengal	39.06	28.08	25.06	25.03
Bihar and Orissa	83.03	86.06	25.03	35.07
Assam	31.24	30.01	22.16	23.97

The Public Health Commissioner in his annual review shows that the outstanding data concerning public health in the year 1928 are briefly as follows —

(1) The birth rate rose from 35 27 in 1927 to 36 78 in 1928

(2) The death rate rose from 24 89 in 1927 to 25 59 in 1928

(3) The infantile death rate rose from 167 in 1927 to 172 94 in 1928

The death rates of other countries in 1928 were England and Wales 70 Canada (ex Quebec) 102 U.S.A. 78 Japan (1923) 166.

Births in British India numbered 8,882,572, or 366,787 more than in 1927, the birth rate being 36 78 against 35 27 in 1927 and 34 64, the given quinquennial mean.

The proportion of males to every 100 females born was 108, the same as the quinquennial average. All provinces except Coorg recorded increases in birth rates compared with the preceding year, the most conspicuous being Delhi (7.78), Punjab (4), N. W. F. P. (3.2), Ajmer Merwara (3.89), Bengal (1.9), United Provinces (1.58). Coorg recorded a decrease of 1.23. The quinquennial average was exceeded in all provinces except in Coorg and Burma. In Bombay the recorded birth rate was the highest since 1901. The birth rate of Lyallpur, Punjab was 54.7. Birth rates exceeded death rates in all the provinces except Coorg where the death rate was in excess by 13.27. The following provinces showed the largest increased ratios of births over deaths—Punjab (21.58), Delhi (19.10), United Provinces (14.09), N. W. F. P. (13.9), Bihar and Orissa (13.0), Madras (11.0) and Bombay (10.89).

Deaths numbered 6,180,114 as compared with 6,009,729 in the preceding year—an increase of 170,385. Registered births exceeded deaths by 2,702,459 against 3,508,977 in 1927 and, Coorg excepted, all the provinces contributed to the increase.

The death rate was 25.59 as against 24.89 in 1927, and a quinquennial mean of 25.97. The rates varied between 19.31 per mille (the lowest) in the North West Frontier Province and 33.66 per mille (the highest) in the Central Provinces.

A total of 1,536,186 deaths or 25 per cent of the total mortality occurred during the first year of life, against 1,421,726, or 24 per cent in 1927. (In England and Wales the corresponding figures for 1927 and 1928 were 9.5 and 9.3 respectively.) Apart from the ameliorating influences of maternity and child welfare work the insufficiency of a pure milk supply and the high prices of milk generally have helped to keep infantile mortality in India at the present high level of 173 per 1,000 births. During 1928 it varied between 287 (the highest) in Coorg, 238 in the Central Provinces, 210 in Burma, 173 in the North West Frontier Provinces, and 132 in Bihar and Orissa (the lowest).

Throughout India 53 out of every 1,000 infants born alive failed to survive the first week of life and about one-half of the infant mortality under one year occurred during the first month, the other half occurring during the rest of the first year.

THE HEALTH OF THE ARMY

British.—The average strength of British Troops, R.N. and R.A.F. on the strength in India during 1928 was 56,327 as compared with 58,008 in 1927. There were also on the strength 3,781 women and 6,100 children. The statistics of sickness also take account of pensioners and others not on the strength. The following table shows the main facts as regards ill health—

	Average Strength.	Admissions to Hospital		Deaths.		Invalids sent Home.		Invalids Discharged from the service		Average Constantly sick	
		No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000
Officers	2,421	1,334	551.0	10	4.13	47	19.41			50	13.20
Other Ranks	56,327	33,034	586.5	166	2.95	556	9.87			1,635,99	29.04
Women	3,785	1,168	307.6	17	4.50	53	14.02			41	26.10
Women Parturition		800								31	73
Children	6,100	1,884	300.7	100	16.39	10	1.64			66	48.10
Others		1,847		23				22		68	63

The health statistics of Officers and other ranks for the quinquennial periods 1910-14, 1915-19 and 1920-24 are given, with those for 1925, 1926, 1927 and 1928 separately for purposes of comparison —

	Admissions.		Invalids.		Deaths.	
	Officers.	Other Ranks.	Officers	Other Ranks.	Officers.	Other Ranks.
1910-14	567 5	567 2	16 30	7 03	5 14	4 36
1915 19	1,053 0	881 7	60 08	29 91	10 64	8 81
1920 24	676 7	791 9	20 99	19 91	6 71	5 24
1925	607 6	623 6	14 02	17 36	5 15	2 80
1926	675 2	649 6	19 81	16 02	6 22	3 01
1927	699 2	623 1	15 75	14 90	3 68	2 68
1928	551 0	586 5	19 41	9 87	4 13	2 93

The principal causes of invaliding to the United Kingdom were —

Inflammation of middle ear	66
Mental diseases	47
Deformities of the feet	48
Pulmonary and other tuberculosis	51
Valvular disease of the heart	18
Disordered action of the heart	25
Epilepsy	29
Neurasthenia	19
Malaria	4

The average number constantly in hospital was 1,635 69 or 29 04 per 1000 of the strength compared with 29 74 in 1927, 31 86 in 1928 and

29 68 in 1913

Men numbering 74,368 or 1 320 2 per mille of the strength, were treated as out-patients, with an average daily number under treatment of 1,010 13 or 7 98 per 1 000

The combined ratio constantly sick in hospital and under treatment as out-patients was 46 97 per 1000 of the strength, compared with 48 53 in 1927 and 51 12 in 1928

The actual loss to the army in Indian working days was approximately 600,000 due to sick in hospital and 370 000 due to sick in barracks making a total of 970 000 days

Indian — The following table shows the main health statistics of officers and Indian ranks for the quinquennial periods 1915-19 and 1920-24 and those for 1925, 1926, 1927 and 1928 —

Period	ADMISSIONS		INVALIDS		DEATHS	
	Officers	Other Ranks	Officers sent Home	Other Ranks Discharged	Officers	Other Ranks
1915-19	882 4	788 2	6*	23 6*	8 29	16 81
1920-24	898 3	593 2	3 60	18 25*	6 67	8 01
1925	480 1	336 8	5 70	12 5*	5 23	4 01
1926	607 7	388 6	4 49	11 6*	4 99	3 75
1927	546 7	363 0	6 35	10 5	4 89	3 38
1928	573 1	371 5	5 79	9 5	4 34	2 94

* Figures not available

The number admitted to hospital was 48,739 or 371.5 per 1000 of the strength, compared with 262 in 1927, 286.6 in 1926 and 331.7 in 1918. The decrease in the admission rate over 1926 was mainly due to improved treatment of Malaria and resulting diminution in relapses.

The average number constantly sick was in hospital 2,034.86, or 15.51 per 1000 of the strength, compared with 15.01 in 1927 and 21.4 in 1918. The figure 15.02 is the lowest recorded for the Indian Army. The average sick time to each soldier was 5.66 days and the average duration of each case 15.23 days. The number of men treated as out-patients was 180,191 or 992.4 per 1000 of strength. The number constantly sick in hospital and under treatment as out-patients was in the ratio of 27.84 per 1000 of strength, compared with 27.60 in 1927 and 33.35 in 1924.

The main causes of deaths were —

Pneumonia (lobar and lobular)	147
Local injuries	39

Genital "	8
Infestations	6
Malaria	14
Circulatory Diseases	13
Pulmonary Tuberculosis	6
Dysentery	6
Bacterial Group of fevers	27
Appendicitis	7

The principal causes of invaliding were —

Pulmonary tuberculosis	345
Injuries	123
Diseases of ear and nose	120
" the eye	72
Organs of Locomotion	73
Other respiratory diseases	65
Diseases of the nervous system	78
Circulatory diseases	68
Malaria	22
Mental diseases	30
Diseases of Lymph system	8
Veneral Diseases	13
Hernia	12

LEPROSY IN INDIA

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. In 1921 when the last Census was made leprosy was regarded as an *extremely* like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it is doubtful if this figure represents anything more than the more advanced cases and possibly a majority of this number are the begging and pauper lepers who are seen all over the country. Dr E. Muir M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, says that "recent figures obtained from a carefully conducted but limited survey tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. B. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realisations amounting to over Rs. 20,00,000 which was invested in the end of 1925. The investments amounted to Rs. 20,65,000 yielding an annual revenue of over Rs. 1,22,000.

In the scheme of anti-leprosy campaign which the Association has put into operation, the respective parts to be played by the Central and Provincial Committees in carrying forward the aims and objects of the Association are definitely apportioned. The Central Committee is vested with the task of promoting research, of preparing and publishing propaganda material, arranging for the training of doctors in the diagnosis and treatment of leprosy according to the latest methods and of conducting an expert survey of selected areas for the ascertainment of the facts regarding the incidence and endemicity of leprosy. Measures for the accommodation and treatment of leprosy patients and other schemes of purely local interest are to be the concern of provincial committees as agents of the Indian Council in the Provinces.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees are expressed in its Memorandum on the method of conducting the anti-leprosy campaign in India which was published in 1925. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest —

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregation is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible,

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects—

- (a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable and so
- (b) to shut off the sources of infection as the number of infectious cases will consequently tend to diminish and the opportunities for infecting the next generation will become fewer

The report of the Association for 1929 shows that the Central Committee spent, during the last five years, Rs. 77,525 on the promotion of medical research, under Dr. E. Muir M.D., F.R.C.S., at the School of Tropical Medicine and Hygiene, Calcutta, Rs. 43,479 on the training of doctors in the diagnosis and special treatment of leprosy, Rs. 41,643 on propaganda, Rs. 46,478 on Survey, and distributed Rs. 240,232 to the Provincial Branches. Special emphasis is laid on the importance of survey. There are

four different aspects of the survey, which are all of great importance. In the first place there is the survey proper. In 1929, Dr. Muir made a short survey of certain endemic areas in the Central Provinces and the Bombay Presidency, and the important data which he then collected impressed upon the Central Committee the necessity of conducting surveys of selected areas throughout India, in order that the true position of the country in regard to the various important factors of the disease may be understood, and the campaign be directed in the light of the experience thus gained. The Committee is of opinion that the survey is playing and will play an important part in helping the problem of leprosy to be studied in its true perspective. In the second place the survey party is training more doctors on the spot. Thirdly, comes the establishment of clinics in the provinces where the knowledge gained by the doctors trained, whether at Calcutta or elsewhere, can be put to practical use. Finally, it is impossible to over estimate the value of this part of the campaign in stimulating interest among the authorities concerned, as well as among the public, in the work as a whole, and in demonstrating the great potentialities of the campaign. The results which are being obtained are of a nature which will ultimately benefit all the Branches.

His Excellency the Viceroy is the President of the Indian Council, the Hon. Sir Henry Moncreiff Smith, Kt., C.I.E., L.C.S., the Chairman of the Executive Committee, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Mr. W. J. Lister, C.I.E., O.B.E., the Honorary Treasurer.

BLINDNESS IN INDIA

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented. In Egypt, renowned for its sufferings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr. MacCallan, has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great trachoma belt, extending from China into Eastern Europe, stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained.

India is in this great Blindness Belt. According to the last census returns there are 490,000 totally blind persons in this population of more than 300 millions. That is an incidence of

1½ totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Naalk district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7, in Bijapur 2.6 as against 0.7, in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palampur 7 per thousand was found. It, as is not unlikely, this sort of error of under-estimation in the census report is general then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 1½ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness and efficiency are thus greatly impaired. The term "blindness" has a different interpretation in every country. In a report on the Prevention of Blindness, published by the League

of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as inability to see well enough to read even with the aid of glasses or for illiterate, inability to distinguish forms and objects with sufficient distinctness and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India there is little doubt that the figure would be very much larger than those indicated above. Recently the All-India Blind Relief Association has made an analysis of a very large number of patients attending its camps and dispensaries and has found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

No one says Col E. H. Elliot late of the Madras Ophthalmic Hospital writing in the British Journal of Ophthalmology of May 1919

who has not worked in India can form any conception of the enormous amount of preventable and curable blindness which is laying its shadow over the health happiness and usefulness of this great portion of our Empire' and the same writer in another place has said —

It is difficult for anyone who has not had first hand experience of medical practice in the East to realise the state of things out there granular ophthalmia claims its victims by the ten thousand whereas it is really a disease which, when properly treated at an early stage, should not cause the loss of a single eye. The neglect of patients suffering from small-pox and other febrile conditions leads to a vast amount of blindness, while the treatment of mild ocular affections by irritant drugs is probably one of the most evil factors that spread blindness broadcast throughout the land. Large numbers of men and women suffering from glaucoma from cataract and from other curable diseases are allowed to hide in their villages like wounded animals waiting only their release by death. This is not an overdrawn picture. It is a statement of cold, hard, cruel facts, well known to everyone who has practised or is practising medicine in the East.

In an editorial on the Ophthalmic work in Egypt and the possibilities of similar work in India, the *Indian Medical Gazette* (March 1922) remarks, — It would seem worth while for the Government of India to examine the working of this splendid organisation for in spite of the fact that workers in India have always been in the front in advances in ophthalmology there has been little organised work in ophthalmic research except in Madras, even there the work has been done by men who have already a large amount of routine work to perform. India as a whole owes its position in the ophthalmic world entirely to the energies of individual enthusiasts whose names are so well known that it is not necessary to mention them. What has been possible in Egypt should also be possible in India and it would appear that the first step should be the establishment of Schools of Ophthalmology, in places like Madras and Calcutta where ample facilities exist. At

these schools advanced teaching and research in ophthalmology would be carried out, and the next step would be to organise a system of ophthalmic relief at selected centres all over India. (There are now schools of ophthalmology at Madras, Bombay, Calcutta, and Lahore).

Again in an editorial from the same journal (Sept 1929) the following statements are made—

What is wanted is some large organisation covering the whole of this sub-continent and aiming chiefly at Prevention rather than treatment.

In brief what the position now calls for is an all India movement.

Obviously the main question is one of general public health. Public health is a transferred department, but if the Health Department of the Government of India interests itself in the matter in co-operation with missionary and voluntary movements we do not despair of seeing an all India organisation created and built up.

Associations known as "Blind Relief" Associations have been working for several years in Western India in conjunction with Government hospitals, to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals which bring relief to the villages in the rural areas. They also work by means of trained village workers, whose duty it is to find out the hidden blind and get them to the medical centre for relief to find out cases of small pox (a constant source of blindness in children), to inspect new born children for the detection of ophthalmia neonatorum to keep registers of all blind and partly blind persons and persons suffering from eye disease and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown. In 1917 Colonel Elliot wrote as follows, To me it seems that the duty and privilege of undertaking this work lie with the State and that no sum spent on such a task could be too large. Unfortunately this is not the view that has been taken by those in authority and consequently we see the spectacle of private enterprise endeavouring to undertake this colossal task.

It is at least permissible to voice an admiration for the stand taken by Mr Henderson. [Founder of the Blind Relief Association movement who began the work in 1913]. The best that one can hope for his endeavour is that he will succeed in arousing the conscience of educated Indians to the needs of their less fortunate countrymen and that this little cloud no bigger than a man's hand, will end in a monsoon of active effort.

As the above was written in 1917 it is not altogether applicable to the criticism of Government of to-day as it has already been shown that there are now several schools of ophthalmology in India and the Government eye hospitals are doing tremendous work but these hospitals are situated in the large towns and cannot possibly by any stretch of imagination, give relief to the millions living in the rural areas.

The All-India Blind Relief Association.—(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay and has for its life President Mr C G Henderson (late I C S) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Prevention of Blindness, which has its headquarters in Paris and was formed on September 14th 1929 under the auspices of the League of Red Cross Societies and the American Society for the Prevention of Blindness. The organising Secretary is R Crawford Hutchinson. The Town Hall Bombay.

A beginning has been made, but it is only a beginning, and it is but the fringe of this vast problem that has been touched. The schools of ophthalmology in India are turning out ophthalmic surgeons who are crowding their profession in the cities and large towns. A scheme for taking these men and placing them in selected centres has been worked out, all that is required is monetary help. The cost is minimal and here is an opportunity for the generous and public spirited to emulate Sir Ernest Cassel and give to India an eye service of which India and the whole world could be proud and to the peoples of India that would to them be probably their most precious possession—their sight.

CHILD WELFARE MOVEMENT

Amongst the most pressing problems of India's health is that presented by the appalling infant mortality. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All India Maternity and Child Welfare League initiated by Lady Chalmers and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the larger towns in India. The amalgamation of these two bodies which has just taken place will undoubtedly increase and develop the work. The institution of an all India Baby Week, an undertaking to which Her Excellency the Countess of Reading has devoted great and successful enthusiasm has also given a stimulus to the work and promises to be an important perennial aid to its progress. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infantile hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children. The admirable work done year by year by the National Association for supplying Female Medical Aid to the Women of India is recognised by the Government of India, which subsidises this organisation with a grant of Rs. 8,70,000 a year for the maintenance of the Women's Medical Service of Indian women.

Centres of Activity.—These may be most conveniently grouped under provinces, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons

appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

Bombay Presidency.—In Bombay City two organisations are at work namely, that under the Corporation and a voluntary society. Both employ medical women and health visitors who conduct clinics and do home visiting. The Corporation also staffs and runs a number of small maternity homes which are much appreciated by the people. Indeed an outstanding feature of maternity work in Bombay is the number of confinements which take place in hospitals. The wretched housing conditions and poverty of the people however, carry off a very large proportion of the infants which are safely ushered into the world by the care of the hospitals. Organised child welfare work is unfortunately largely limited to the Presidency capital. In other places the development has rather been in the direction of the establishment of small maternity homes, which are mostly very flourishing and do excellent work.

Propaganda work has been very energetically carried on by the Bombay Presidency Health and Baby Week. This organisation supplies literature, posters, magic lantern slides and even cinema films for health teaching and arranges for local baby weeks throughout the Presidency. The work of the Seva Sadan Society at Poona is remarkable for the encouragement it has given to education for the profession, medicine, nursing and public health. Without such trained personnel, progress would be repeatedly held up. The Karachi Branch of the Indian Red Cross Society has appointed a trained woman organiser for touring the districts of Sind a region where the infant mortality is appallingly high.

Bengal.—Here again the major portion of the child welfare work is carried on at the capital. Efforts are being made to spread the work into the districts but progress is very slow. In Calcutta the Corporation carries on an extensive work supplying trained midwives in the homes of the poor. The infants thus brought under the care of the scheme are followed up by a system of house visiting. The Indian Red Cross Society has several child welfare clinics a feature of which is the supply of milk for children, free or at low cost. Besides this the

Society is largely responsible for the Health visitors training school, to which the local government has as yet given no aid. In three of the big jute mills, centres are now established and it is hoped that further progress will soon be made in this direction. The work in Dacca progresses well and nearly half of the infants born are under the care of the scheme.

Madras.—The child welfare scheme of the Corporation continues to develop. There is a danger that the desire of the people for medical aid will interfere with the truly preventive nature of the work, and the supply of medicines should be cut down. A large amount of milk is supplied free, or at less than cost price to the poorer citizens. The Corporation midwives attend a very large number of confinements yearly. The Maternity and Child Welfare Association runs a number of centres which do good work. This Association has now become part of the Red Cross Society and it has re-started its Health visitors training school under new auspices. It is hoped that the Government will soon recognise the value of the work sufficient to give the school financial aid.

In the Madras mofussil a good many centres are at work, some under municipalities or district boards and some under voluntary societies. This work is not of as high quality as one could wish and needs the directing hand of an expert. This, it is hoped, will shortly be provided by an appointment which is about to be made of an Assistant to the Director of Public Health whose special work will be to inspect, control and encourage child welfare schemes.

Central Provinces.—In these provinces the Child Welfare Division of the Red Cross Society receives a considerable grant from Government for the support of child welfare schemes in the various towns and district. There is a great demand for these, and fortunately the demand can be met since the presence of a Health School provides the necessary number of Health visitors. The work is excellently organised and it appears probably that the health workers in this province may be formed into a proper cadre in the not distant future. The Health School is entirely maintained by Government.

The high degree of organisation shown in a province usually regarded as backward is remarkable, and is due mainly to the enthusiasm of the Secretary who, though not a paid worker, devotes a great deal of time to the work.

United Provinces.—In these provinces the work is organised by a medical woman, a member of the W. M. S., who is assistant to both the Inspector-General of Civil Hospitals and the Director of Public Health. As a result the work has made rapid progress and many centres are at work. The training school at Lucknow supplies the workers. Government gives extensive grants to the committees of management which is a joint one of the Indian Red Cross Society and the Lady Chelmsford League. There is also a midwives training school which trains large numbers who go to work in the districts subsequently. Baby and Health Weeks are also celebrated with aid from headquarters.

The Punjab.—The work here is perhaps more directly official than in any other province. An Inspector of health centres works under the Director of Public Health, who constantly tours and inspects the centres giving much advice and encouragement. The local management of centres is usually in the hands of voluntary committees which receive grants in aid both from the provincial Government and local bodies. Though the province is passing through a time of financial stress the principle of grants in aid is recognised and will be adhered to. The training school for health visitors is wholly undertaken by the provincial government. The high quality of the work done in the various centres is mainly due to the excellent training received at the school.

Assam.—There is no organised work on the part of the provincial government though in a few places an effort is being made to start it. The poverty of the province, the poor education of the women and the nature of the country make progress very difficult.

Bihar and Orissa.—This is also a poor and backward province, but a beginning has been made at Patna and Cuttack with the appointment of Maternity supervisors to control the work of indigenous *dais*. In the coal mine areas, after many years of hesitancy, a start is being made which should lead to great activity and corresponding benefit to the people. Health visitors are also at work in one of the most important of the Orissa Feudatory States.

Delhi.—The work in Delhi was started early in the history of the movement, and it has been carried on in a manner worthy of the seat of Government. The Municipality employs a medical woman with English qualifications who superintends the work under the Medical Officer of Health. Centres are placed strategically throughout the city, the indigenous midwives are taught and controlled and medical inspection of school children is carried on. New Delhi and the district are under an energetic Medical Officer of Health who is responsible for a great increase in the work during the last two years. Delhi is also the seat of the oldest Health School in India which is mainly supported by the Lady Chelmsford League and which turns out well qualified health visitors every year.

North West Frontier Province.—Practically the only civil work is carried on at Dera Ismail Khan. This was started some years ago and has continued to flourish. A provincial *dai* training school is found here which provides for the training of *dais* from various districts of the province.

Saleshinistan.—At Quetta the maternity work of the city has resulted in very complete control of the indigenous practicing midwives to the great advantage of the people.

Rajputana.—The Maternity Home, Ajmer, trains midwives for many of the States, and a certain amount of child welfare work is also carried on. Child welfare work is in existence at Jaipur and Mairathad and there are possibilities latent in the various states which good organisation could develop.

Child Welfare in the Army—The care needed by the wives and children of sepoys is being increasingly realised and nowhere more than in the units themselves. The result has been, in the last few years, the opening of much work in this direction. Much of it is purely medical work, which in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres many of them assisted by the Indian Red Cross Society and Lady Chelmsford League. A remarkable feature of this movement is the keenness of the men themselves to aid it realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions

progress will necessarily be slow and India has yet to decide whether she will work hesitatively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty under-consumption, epidemics and famines. In Western lands the Child Welfare Movement has no more marked characteristics than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds etc. etc. But these are not yet its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed incompetent citizens.

INDIAN RED CROSS SOCIETY

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilisation for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.
2. The care of those suffering from Tuberculosis, having regard to the first place to soldiers and sailors, whether they have contracted the disease on active service or not.
3. Child welfare.
4. Work parties to provide the necessary garments, etc. for hospitals and health institutions in need of them.
5. Assistance required in all branches of nursing, health and welfare work, auxiliary to any organisations which have or may come into being in India and which are recognised by the Society.
6. Home Service Ambulance Work.
7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs 10,000 Rs 5,000 Rs 1,000, Rs 12 annually or a consolidated payment of Rs 100 and any thing between Rs 1 and Rs 5 annually or consolidated payment of Rs 50. At the end of 1920 there were 23,934 members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces are now following suit and at the end of 1920 the Society had a total Junior membership of 55,080.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 15 are the Vice-Presidents nominated by Provincial or State Branches 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is the Hon'ble Sir Henry Moncreiff Smith, Kt, C.I.E., I.C.S., and the Organising Secretary, Miss Norah Hill, A.R.R.O.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920

with a capital investment of the face value of Rs 54,35,000 and Rs 8,01,500-8-8 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1920, stood at a capital investment of the face value of Rs. 67,55,000-0-0. The income derived from the capital of the Society, (which is 2½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central Our Day Fund. A sum of Rs. 2,70,000-0-0 was so distributed to the Provincial Branches under this arrangement during the year 1920.

ST JOHN AMBULANCE ASSOCIATION

(Indian Council)

The St John Ambulance Association was founded in 1877, by the Order of the Hospital of St John of Jerusalem in England, and has for its objects—

(a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured,

(b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room

(c) The manufacture, and distribution by sale or presentation, of ambulance material and the formation of ambulance depots in mines, factories, and other centres of industry and traffic,

(d) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps,

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality or denomination

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued 1,78,952 certificates of proficiency in

First Aid, Home Nursing, Home Hygiene and Sanitation and 8103 tokens such as Vouchers, Medallions, Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits

In 1920 the Indian Council spent Rs 79,788 in furthering its objects and closed the year with Govt securities of the face value of Rs. 70,000. The Association has five grades of members namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs 1,000, Rs 500 Rs. 100, Rs 5, and Rs. 2

Their Excellencies Lord and Lady Irwin and Field Marshal Sir Philip Chetwode as President, Lady President and Chairman, respectively with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble Sir Henry Moncreiff Smith, Kt, C.I.E., I.C.S., is the Chairman, and Miss Norah Hill, A.R.R.O., the General Secretary

INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has a small and highly archaic "mental hospital" at Bangalore, there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the jails where, of course, no provision exists for any kind of treatment. According to the last Census (1921) out of a total popula-

tion of 318,942,480 (India and Burma) there are 88,806 persons insane, making a proportion of insane to sane of 8 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded" an item that is not included in the figures for British India

INDIA.

Provinces, States and Agencies	General population.			Insane population		
	Male	Female	Total	Male.	Female.	Total.
Provinces under British Administration.	189,843,123	121,707,210	273,950,433	44,873	22,224	72,907
States and Agencies	24,752,431	23,229,616	47,992,047	9,478	5,920	15,398
Total for all India	163,995,554	154,946,926	318,942,480	54,151	28,154	82,305

For the care of the 82,305 insane of India and Burma there exists accommodation in mental hospitals for 8,750 hence only one person in ten out of the total insane population can obtain accommodation in institutions which exist

especially for their care and treatment

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died —

Province	No of Mental Hospitals	Admitted and readmitted during the year	Total Population of Mental Hospitals.			Discharged cured	Died	Daily average		Criminal Lunatics
			Male	Female	Total			Strength.	Sick	
Assam	1	66	410	95	505	21	47	438 47	59 35	245
Bihar and Orissa	2	364	1,535	398	1,933	208	53	1 804 49	74 68	514
United Provinces	3	779	1,561	412	1,973	174	106	1,274 83	155 08	425
Punjab	1	297	982	262	1,244	132	102	839 88	73 63	207
Central Provinces	1	87	389	90	484	33	19	410 96	20 37	135
Bombay	5	608			2,109	237	171	1 534 20	93 7	226
Madras	3	469	1,150	357	1,512	143	80	1 105 29	185 89	194
Burma	2	276	1,111	169	1,280	88	59	1,002 55	44 06	564
Total	18	3,046			11,040	638	830	8,200 67	656 71	2,601

It will be observed that there is now no mental hospital in Bengal. Insane from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota Nagpur. The so-called Central Mental Hospitals, that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained specialists. The Administration of the remaining Mental Hospitals in British India and Burma, lies with the Civil

Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation, no reliable information is available in view of the comparative paucity of cases in proportion to the general

population that comes under observation. On the other hand the incidence by age is shown fairly well in the Census Report of 1921 which is as follows —

INDIA

AGE	Insane.		Distribution of the insane by age per 10,000 of each sex.	
	Male.	Female.	Male.	Female.
YEARS				
0-4	651	484	121	142
5-9	2,906	1,882	539	558
10-15	4,098	2,763	761	808
15-20	4,366	3,076	810	904
20-25	5,518	3,370	1,024	998
25-30	6,861	3,582	1,273	1,033
30-35	7,221	3,349	1,342	1,131
35-40	5,651	2,949	1,049	867
40-45	5,316	3,486	987	1,025
45-50	3,332	2,157	616	634
50-55	3,182	2,492	581	732
55-60	1,465	1,036	272	305
60-65	1,683	1,471		
65-70	602	439		
70 and over	1,070	1,006		
Unspecified	270	183		
Total for all India	56,151	34,154	623	857

A further result of the widespread ignorance and apathy both official and non-official, towards psychiatry and its cognate interests, is the lack of any provision for the care and treatment of mentally defective children. In 1925, the Hon'ble Haroon Jaffer moved the Council of State to recommend to the Governor-General in Council that the Provincial Governments be asked to investigate the best means of dealing quickly and adequately with cases of mental defectives. A discussion followed which was remarkable only for the ignorance of the subject displayed by all who took part in it. The motion was eventually withdrawn.

Finally there is still a lamentable failure everywhere to appreciate the intimate associa-

tion of crime with mental disorder and the extreme paucity of medical men throughout the whole of India with any real knowledge of mental diseases leave the decision of questions involving what the law terms "responsibility" in crime in the hands of medical men who are in no sort of sense "experts". In other words the current ideas both as regards the theory and practice of dealing with insanity and crime in India can only be described as archaic.

(See also "Insanity in India" by Colonel G. F. W. Evans, I.M.S., and "Lunacy in India" by Colonel A. W. Overbeck-Wright, M.D., I.P.E., I.M.S., and Colonel H. P. Jago Shaw's book.)

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals, to train women doctors, nurses and midwives in India, and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial Branches. It gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women.

It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors and a Junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. Lady Irwin, C.I., The Hon. Secretary is the Surgeon to H. E. the Viceroy, and the Secretary Dr. A. C. Scott, C.M.D., W.M.S., C.B.N., Red Cross Building, New Delhi and Vice-regal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of Rs 25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (a) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty sanctioned through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (b) Must be between the ages of

twenty-four and thirty at entry. (c) She must be a first-class medical woman, i.e. she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act but this condition does not apply as the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows:—

1st to 3rd year	4th to 6th	7th to 9th	10th to 12th	13th to 15th	16th to 18th	19th to 21st	22nd to 24th	24th and after
Rs 450 per month.	500	550	600	650	700	750	800	850

also an overseas allowance of Rs 100 per month to those below 12 years' service and Rs 150 per month to those of 12 years' service and over. Every officer of the Service shall pass an examination in such vernacular as the Executive Committee shall appoint within the first three years of her service, and shall receive no increment after that period until such examination has been passed. In addition

furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty-five. An officer recruited in England whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules—(a) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (b) Leave on average pay is granted up to 2-11 of an officer's period on duty according to Fundamental Rules. More than eight months leave on average pay is not granted at one time. (c) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh per day is granted in addition to average pay during study leave. (d) Extraordinary leave at any time at the discretion of the Executive Committee. (e) Leave not due may be granted subject to the following conditions—(i) on medical certificate, without limit of amount, and (ii) otherwise than on medical certificate for not more than three months at any one time and six months in all reckoned in terms of leave on average pay. (f) The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months. (g) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty, sufficient to earn a credit of leave equal to the period of leave which she took before it was due. There are no allowances during extraordinary leave. A doctor appointed in England receives a sum of £100 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also a Provident Fund, each member contributing monthly thereto ten per cent of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent per annum, or at such rate as the Council can invest without risk to the funds of the Association.

An officer loses the contributions made to her account by the Association with the interest thereon if she resigns (except on account of ill health) before completing five years service or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

Free Passages—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four, the first falling due after 4 years service.

The Training Reserve of the Women's Medical Service—This Service has a sanctioned cadre of eight, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs 200 to Rs 300 per month with furnished quarters or the equivalent in money, to those employed in India.

Two of the eight members of the reserve but not more at any one time may be deputed to Europe by the Executive Committee for post-graduate training and shall receive a stipend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1906, in order to secure a certain amount of improvement in the practicing dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the

objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work.

LADY CHELMSFORD ALL-INDIA LEAGUE FOR MATERNITY AND CHILD WELFARE

By 1920 it had come to be realised that the Dufferin organisation was not wide enough in that it did not include what may be called the field of preventive medicine. Lady Chelmsford decided to face this problem. Accordingly with the aid of a public subscription she founded a separate All India League for maternity and child welfare, called after her name, and registered it as a separate organisation under Act XXI of 1880. The objects of the Association, as described in the Memorandum of Association, are 'the promotion of maternity and child welfare generally in India.' It is

also laid down that the funds of the League may be applied to the following, among other purposes—

- (1) The training of Health Visitors and Maternity Supervisors and the rendering of financial assistance in the employment of trained personnel where necessary.
- (2) Propaganda in connection with the objects of the League.
- (3) The formation and establishment of Branches of the League and the affiliation with the League of other bodies.

having similar objects, without unduly interfering with the organisation and administration of affiliated institutions or with their powers of raising money

(4) The doing of all such things as are incidental or conducive to the attainment of the above kindred objects

Branches of the League have been formed in Rajputana, Madras, the United Provinces, and the Punjab

The original corpus of the League fund amounted to Rs 8,18,657 To prevent overlapping with other activities, financial aid is not given to branches of the League in Governor's provinces, except for the purposes of Health Schools In areas other than Governor's provinces, financial help is given to child welfare activities generally The bulk of the income of the League is thus devoted to Health Schools and propaganda, which latter includes National Baby Week

The Lady Reading Health School which was formerly known as the Delhi Health School is the chief activity of the Lady Chelmsford League by whom it is entirely financed

The Health School was started in 1919 and has trained over 100 students who are now engaged in health work in all parts of India

Amalgamation of Administration.—At a general meeting held in Simla in July 1923 it was decided that the administration of the Funds for the physical welfare of Indian women under the Presidency of the Viceroy's wife should be administered by a single committee and with identical rules These funds are the Countess of Dufferin's Fund Women's Medical Service for India Victoria Memorial Scholarship Fund and Lady Chelmsford All India Maternity League The President of the Amalgamated Committee is H E the Lady Irwin and the Hon and Joint Secretaries are respectively, the Surgeon to the Viceroy and Dr A C Scott WMS The Hon Treasurer is the Honble Mr E Burdon

Lady Hardinge Medical College and Hospital.—The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916 It is a residential Medical College staffed entirely by women and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment Thirty lakhs of rupees, in all have been given for these purposes mostly by the Ruling Princes and Chiefs of India After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder and be called by her name

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All India Association of Medical Women, the Surgeon to H E the Viceroy, an Indian member of the Council of State 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of

India, Delhi The Honorary Secretary, who is also a member of the Governing Body is the Deputy Director-General, Indian Medical Service The Deputy Accountant-General, Central Revenue acts as Honorary Treasurer

The College and Hospital together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi (Rakina) within easy reach of the old city The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation Strict observance of purdah cannot, however, be guaranteed in the case of students As the hospital patients are all women or children, it is for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi The College buildings contain a library Museum, Lecture Rooms, Laboratories and offices Hostels are provided for Hindu, Moslem, Sikh and Christian students The hospital is a fine modern building with accommodation for 200 in patients and a commodious out-patients department The College and Hospital are supported by a grant of Rs 311,000 from the Government of India supplemented by grants from Provincial Governments and Indian States Students are prepared for the Intermediate Science Examination, and the M B B S degree of the Punjab University, with which the College is affiliated

SENIOR STAFF

Principal and Professor of Midwifery and Gynaecology.—Dr O'Brien Breardon MBS (Iond) LSA MD Ch B (Glas) Women's Medical Service

Vice-Principal and Professor of Surgery.—Miss Hamilton Browne M B Ch M (Syd) D T M (Calcutta), WMS

Professor of Medicine.—Miss N E Trouton MBS (Lond), MRCO, LRCP D T M Calcutta

Professor of Ophthalmology.—Miss B. Boulton M B, Ch B (Glas), DO (Oxon) WMS

Professor of Pathology.—Miss L S Chatterji, M B Ch B (Aberdeen), DPH, Cambridge, WMS

Professor of Anatomy.—Miss K J McDermott M B, BS (Punjab) WMS

Professor of Physiology.—Miss E Surie M So

Professor of Radiology.—Miss Joyce Peake MRCO, LRCP

Lecturer in Physics and Mathematics and Superintendent of the Science Department.—Miss J H Ross, M A, B.Sc (Glas)

Lecturer in Chemistry.—Miss Scabella Ram, M A (Cantab)

Lecturer in Biology.—Miss C O Burt, B.Sc. (Edin.)

Lecturer in English.—Miss Ebbutt M A (Dublin), Modern Language Tripos (Cantab)

Bursar and Warden.—Miss M W Jenson, M A (Cantab)

Attached to the Hospital there are (1) a Training School for Nurses, and (2) a Training School for Dispensers All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendents, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a proscribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step further, through the establishment of the Bombay Presidency Nursing Association, *apud* St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses' Institution is Mr. A. E. Nicholson, Allahabad Bank Building, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch) 4 Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road, South; Nurses Academy, 6, Suburban Hospital Road; and Nurses Bureau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gopka Hospital at Kilpank, the Royappa Hospital and the Ophthalmic Hospital, also the Lady Amphill Nurses' Institute and the South Indian Nursing Association (now amalgamated). President, Her Excellency Lady Goshen. The Association has under its management—The Lady Amphill Nurses' Institute, Western Castle, Mount Road, Madras. Fully trained and experienced nurses for all cases of Hindus both among Europeans and Indians, always available. The Lady Wellington Nursing Home, Western Castle, Mount Road, Madras, and *Nigiri Nursing and Convalescent Home*, Ootacamund, for Medical, Surgical and Maternity cases. The *Nigiri Nursing Home* affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was among the first in India to realise the value of nursing in connection with

hospital work. The first steps were taken on the initiative of Mr. L. E. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1890. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their work. This Association was incorporated under the Societies Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function however was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1928.

Memorandum, Rules and By-laws of the Association were however revised or brought into line with the actual working of the Association. Towards the end of 1927, the Committee decided that some steps must be taken to do so and accordingly appointed a sub-committee to consider the revision and amendment of the Memorandum, Rules and By-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the present rules piecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the lines of the Registration Act in the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1928.

The following are affiliated associations as well as Training Institutions:

St. George's Hospital Nursing Association, Bombay, (for nurses only). Hon. Secretary P. E. Thomson, Esq., Jamesotji Jijibhai Hospital Nursing Association, Bombay, (for nurses and Midwives). Hon. Secretary Dr. Khatke, O.B.K., F.R.C.P.

Goonidas Telpal Hospital Nursing Association, Bombay (for nurses only), Hon. Secretary W. Dillon, Esq., I.C.S.

Cama & Alfless Hospitals Nursing Association, Bombay, (for Nurses and Midwives)
Hon Secretary H. C. B. Mitchell, Esq.
Season Hospital Nursing Association, Poona, (for Nurses and Midwives), Hon. Secretary N. J. Wadia, Esq. B.A. Bar-at-law
Karachi Civil Hospital Nursing Association (for Nurses only), Hon. Secretary H. H. Hood, Esq.

Civil Hospital Nursing Association Nasik (for Nurses and Midwives), Hon. Secretary Civil Surgeon, Nasik.

Civil Hospital Nursing Association, Ahmedabad (for Nurses and Midwives) Hon. Secretary Civil Surgeon, Ahmedabad.

Victoria Nursing Association, Sholapur (for Nurses and Midwives), Hon. Secretary Civil Surgeon, Sholapur.

The following are only affiliated Associations but not Training Institutions —

Ahmednagar Civil Hospital Nursing Association, Hon. Secretary Civil Surgeon, Ahmednagar.

Bijapur Civil Hospital Nursing Association Hon. Secretary Civil Surgeon, Bijapur.

Byramji Jijibhai Nursing Association Mathuran, Hon. Secretary Lt.-Col. M. S. Irani, I.M.S.

Dharwar Civil Hospital Nursing Association, Hon. Secretary Civil Surgeon, Dharwar.

Kanara Nursing Association, Karwar, Hon. Secretary Civil Surgeon, Karwar.

Fanch Mahals Nursing Association, Godhra Hon. Secretary Civil Surgeon, Godhra.

Princes of Wales Nursing Association, Aden, Hon. Secretary G. Richmond, Esq.

The following are recognised Training Institutions —

V J Hospital, Ahmedabad (for Nurses and Midwives)

State General Hospital, Baroda (for Nurses and Midwives)

Civil Hospital Belgaum (for Nurses and Midwives)

King Edward VII Memorial Hospital, Parel, Bombay (for Nurses only)

Bai Yamunabai L. Nair Charitable Hospital, Lamington Road, Bombay (for Nurses only)

Bomanji Dhabhaw Pethi Parel General Hospital, Cumballa Hill, Bombay (for Nurses only)

Civil Hospital, Jalgaon (for Nurses only)

Lady Dufferin and Louisa Lawrence Institute, Karachi (for Nurses and Midwives)

West Hospital, Rajkot (for Nurses only)

Morabhai Vrajbhaidas Hospital, Surat (for Nurses and Midwives)

American Presbyterian Mission Hospital, Miraj (for Nurses only)

St Luke's Hospital, Vengurda (for Nurses only)

Parsi Lying in Hospital, Bombay (for Midwives only)

St. Margaret's Hospital, Poona (for Midwives only)

King Edward Memorial Hospital Poona (for Midwives only)

Newroji Wadia Maternity Hospital, Parel, Bombay (for midwives only)

Acharnaji Girdharlal Maternity House, Ahmedabad (for Midwives only)

Civil Hospital, Surat (for Midwives only)

Benana Mission Hospital, Broach (for Midwives only)

Lady Dufferin Hospital, Sholapur

Provision for retiring allowances is made for all members on the basis of a Provident Fund and a Nursing Reserve has been established for employment in emergencies such as war, pestilence or public danger or calamity.

Address — The Registrar, Bombay Presidency Nursing Association Old Custom House, Fort Bombay

Lady Minto's Indian Nursing Association

In 1906 this Association was inaugurated, replacing the Punjab and Up-country Nursing Association for Europeans in India, which Society, established in 1892, had accomplished much useful work in this country. Owing, however, to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lytton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Shephard, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co-operation towards this project, and after much consideration and discussion with the Government of India, Lieut.-Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto, addressed to the public both in England and India was responded to most generously and sufficient funds were collected to form an endowment fund, which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Lady Irwin is President of the Central Committee in India. Hon. Secretary Lt.-Colonel Hay Thorburn, C.I.E. I.M.S.

Hon. Treasurer (Recently Vacant)

Chief Lady Superintendent Miss G. Beckett. Address—Central Committee, I.M.J. N.A. Viceregal Lodge, Simla, and Red Cross Building, New Delhi.

Hon Secretary, Home Committee, Lt.-Col. Sir Warren R. Crooke-Lawson, G.B., G.L.S., O.B.E., LL.D., Thornfield Vine Road, Barnes, S. W. 13.
Secretary, Home Committee Miss M. E. Ray, R.R.O. 10, Witherly Mansions, Raris Court Sq.

Nurses Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses Association of India, and has the one set of officers. The Trained Nurses Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 172

including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

President Mrs G D Franklin 83, Rajpur Road, Delhi.

Hon. Secretary and Treasurer Miss Gadsden, General Hospital, Madras

THE WOMAN SUFFRAGE MOVEMENT

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses by the necessity for the presence of the wife at all ceremonies performed by a Brahman by the idea of the sacred mystery of womanhood inspired by the purdah, and by the general veneration of motherhood. Secondly the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1923 over 100 women have become Municipal

Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The intervention of one of their own sex, Dr Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. R. B. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic All-India Women's Deputation which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation.

Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (8) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the above-mentioned Memorandum that 'a full measure of Local Self-

Government should be immediately granted, we request that it shall include the representation of our women a policy that has been admittedly successful for the past twenty years in Local Self Government elsewhere in the British Empire. The president for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens, and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India, was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for and the country's support of the inclusion of women in the new franchise.

After the introduction of the Government of India Bill into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the Madras Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its

introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Muhammadan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted in the resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men.

Mr. Trivedi brought forward a Woman Suffrage Resolution in the Bombay Legislative Council during the same session but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Sahab Harilal Desai of Ahmedabad. Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujarati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The Bombay Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Legislatures gave the lead to the other Provinces. In September, 1922 Mr. S. M. Bose, in the Bengal Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 56 to 37 votes, a loss of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr. Devaki Prasad Sinha a similar Resolution in the Behar and Orissa Legislative Council was defeated by only a 10 votes' majority.

These Debates proved an educational to their respective Provinces that the Bengal and Behar Provinces have since granted qualified women the Municipal Vote.

In February, 1923, a world suffrage record was made by the unanimous vote of the United Provinces Legislative Council in favour of Woman Suffrage.

In 1926 the Punjab granted woman suffrage without a division and in 1926 the Central Provinces.

The new Reform Bill for Burma has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1923, the Mysore Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women

In October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. R. The Maharaja and His Privy Council in June 1923. In October, 1924, Assam Provincial Council granted Woman Suffrage for its Province by 26 to 6. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

In 1920 soon after the All-India Women's Educational Reform was held in Patna, the Legislative Council of Behar and Orissa gave women the right of voting election and nomination to the Council on the same terms as men. Thus the whole of British India has now given to women equal political rights with men. The result has already demonstrated itself in the remarkable advancement of all the interests of women along the lines of education, health, housing, morality and social customs.

The Indian Native States of Travancore, Cochin and Rajkot are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poomal Lukose became a member of the Travancore Legislative Council on taking the position of State Parish Physician. She acted as Minister for Health to the State for three years. Cochin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament and the gaining of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures. A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly 'in November 1928, women in India voted for the first time for the elections of both Provincial Legislative Councils and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April, 1926 as a result of a favourable recommendation of the Muddinan Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies.

Again Madras Council, on the 17th July, was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab followed its lead in August and October respectively. This enabled women to become members of the Councils which have been functioning since then. But the permission came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council in British India, the recipient of the honour being Dr. MUTHULAKSHMI AMMAL, and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office of DEPUTY PRESIDENT OF THE COUNCIL. Since then Mrs. Kale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All India Women's Conference in Delhi in 1928 waited on the Viceroy requesting him to nominate two women to the Legislative Assembly. That has still remained ungranted.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibility will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement: Lady D. Tata, Lady A. Bose, Lady T. Sadasivalar, the Begum of Cambar, Mrs. Ramabai Ranade, Mrs. Sarojini Naidu, Mrs. Jaiji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinnarajadasa, Dr. A. Besant, Mrs. M. E. Cousins, Mrs. Sriyanigama, Mrs. Chandrasekhara Iyer, Miss S. Sorabji, Mrs. Khedkar, Dr. Mistry Dr. Muthulakshmi Ammal, Mrs. Palmer, Mrs. Saraladevi Choudhuri, Mrs. Kusumini Basu, Mrs. K. N. Roy, Lady Shafi, Mrs. Hassan Isam, Miss S. B. Das, Mrs. P. K. Sen, Mrs. Eustoma Parakkal, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Rashid, Mrs. van Gilderscheester, etc.

Warrant of Precedence.

A new Warrant of Precedence for India in representation of the notification published on February 10, 1899, which has been approved by His Majesty the King Emperor of India, was published in 1922. Hereafter the following table will be observed with respect to the rank and precedence of persons named, as under—

1 Governor-General and Viceroy of India
2 Governors of Provinces within their respective charges

3 Governors of Madras, Bombay and Bengal.
4 Commander-in-Chief in India.

5 Governors of the United Provinces, Panjab, Behar and Burma

6 Governors of the Central Provinces and Assam.

7 Chief Justice of Bengal
8 Bishop of Calcutta, Metropolitan of India

9 Members of the Governor-General's Executive Council

10. Commander-in-Chief of His Majesty's Naval Forces in the East Indies

11 President of the Council of State.

12 President of the Legislative Assembly

13 Chief Justice of a High Court other than that of Bengal

14 Bishops of Madras and Bombay

15 Agents to the Governor General in Rajputana, Central India and Baluchistan, Chief Commissioner of the North-West Frontier Province, Members of Executive Councils and Ministers of Governors and Lieutenant-Governors, Political Resident in the Persian Gulf, Residents at Hyderabad and in Mysore, and Commissioner in Sind,—within their respective charges

16 Chief of the General Staff, Chief Commissioner of Railways, General Officer Commanding Northern, Southern, Eastern and Western Commands, and Officers of the rank of General

17 Members of the Executive Councils and Ministers in Madras, Bombay and Bengal

18 Members of the Executive Councils and Ministers, United Provinces, Punjab, Burma and Behar

19. Agents to the Governor-General in Rajputana, Central India and Baluchistan, Chief Commissioner of the North-West Frontier Province, Political Resident in the Persian Gulf, and Residents at Hyderabad and in Mysore

1. The entries in the above table apply exclusively to the persons entered therein, and while regulating their relative precedence with each other, do not give them any precedence over members of the non-official community resident in India who shall take their place according to usage.

2. Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se* according to the date of entry into that number.

3. When an officer holds more than one position in the table he will be entitled to the highest position accorded to him.

4. Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

5. All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades.

6. All other persons who may not be mentioned in this table to take rank according to general usage, which is to be explained and determined by the Governor-General in Council in case any question shall arise. When the position of any such person is so determined and notified, it shall be entered in the table in *habeas*, provided he holds an appointment in India.

7. Nothing in the foregoing rules to disturb the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

8. The following will take courtesy rank as shown —

Consuls-General, immediately after article 87, which includes Colonels Commandant, Consuls, immediately after article 40, which includes

Colonels Vice-Consuls, immediately after article 83, which includes Majors.

Consular officers do *not* carry on their respective grades take precedence of consular officers who are not do *not* carry on.

9. The following may be given, by courtesy, precedence as shown below, provided that they do not hold appointments in India —

Peers according to their precedence in England, Knights of the Garter, the Thistle and St. Patrick, Privy Councillors, Members of the Council of the Secretary of State for India. — Immediately after Members of the Governor-General's Executive Council, article 8.

Barons of England, Scotland, Ireland and the United Kingdom, according to date of Patents Knights Grand Cross of the Bath Knights Grand Commander of the Star of India Knights Grand Cross of St. Michael and St. George Knights Grand Commander of the Indian Empire Knights Grand Cross of the Royal Victorian Order, Knights Grand Cross of the Order of the British Empire. Immediately after the Commissioner in Sind (Article 15); Knights Commander of the Bath, Knights Commander of the Star of India, Knights Commander of St. Michael and St. George, Knights Commander of the Indian Empire, Knights Commander of the Royal Victorian Order, Knights Commander of the Order of the British Empire and Knights Bachelor — immediately after the Residents of the Second Class, Article 81.

10. All ladies, unless by virtue of holding an appointment themselves they are entitled to a higher position in the table, to take place according to the rank herein assigned to their respective husbands, with the exception of wives of Peers and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons such ladies to take place according to their several ranks, with reference to such precedence in England, immediately after the wives of Members of the Governor-General's Executive Council.

Indian Orders.

The Star of India

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1863, 1875, 1876, 1897, 1902, 1911, 1916 and 1920 and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire, the second and third classes for services in the Indian Empire thirty years in the department of the Secretary of State for India. It consists of the Sovereign a Grand Master (the Viceroy of India), the first class of forty four Knights Grand Commanders (22 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred and twenty five Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The insignia are (i) the Collar of gold, composed of the lotus of India, of pairs branches tied together in native of the united red and white rose, and in the centre an Imperial Crown, all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular ribbon, tied at the ends and inscribed with the motto of the Order *Hautesse Lights our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cord of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky blue having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colour and pattern as a Knight Grand Commander, and pendant therefrom a badge of a smaller size. (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears from his left breast a badge of the same form as appointed for a Knight Commander, but of a smaller size pendant to a like ribbon of the breadth of one and a half inches. All insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order—His Most Gracious Majesty The King Emperor of India.

Grand Master of the Order—His Excellency the Viceroy and Governor-General of India, the Right Honourable Lord Irwin, F.C., G.M.S.I., G.M.I.,

Officers of the Order—*Registrar* Col the Hon. Sir George Arthur Charles Crichton, K.C.V.O., Secretary of the Central Chancery of the Orders of Knighthood, St. James' Palace, London, W 1.

The Most Eminent Order of the Indian Empire

This Order, instituted by H. M. Queen Victoria, Empress of India, December 1877, and extended and enlarged in 1886, 1887, 1892, 1897, 1902, 1911, 1915 and 1920 is conferred for services rendered to the Indian Empire, and consists of the Sovereign a Grand Master, forty Knights Grand Commanders (of whom the Grand Master is first and principal), one hundred and forty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year), also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order as well as certain Additional Knights and Companions appointed by special statute Jan 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Govt. in India.

The Insignia are (1) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride and Indian roses, in the centre the Imperial Crown, the whole linked together with chains, (2) The STAR of the Knight Grand Commander comprised of five rays of silver having a small ray of gold between each of them the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy within a purple circle, edged and lettered gold inscribed *Imperatrix Auspiciis*, and surmounted by an Imperial Crown gold (3) The BADGE consisting of a rose, enamelled gules, barbed vert, and

having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis* surmounted by an Imperial Crown, also gold (4) The MANTLE is of Imperial purple satin lined with and fastened by a sash of white silk with purple silk and gold tassels attached. On the left side a representation of the Star of the Order

A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colour (purple) and pattern as a Knight Grand Commander pendent therefrom a badge of smaller size (b) on his left breast a star similar to that of the first class, but the rays of which are all of silver

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order at Calcutta

A Companion wears from the left breast a badge (not returnable at death) of the same form as appointed for a Knight Commander but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order — His Most Gracious Majesty The King Emperor of India

Grand Master of the Order — H. E. the Viceroy Lord Irwin.

Officers of the Order — The same as for the Order of the Star of India

The Imperial Order of the Crown of India.

This Order was instituted Jan 1, 1878 and for a like purpose with the simultaneously created Order of the Indian Empire. It consists of the Queen and Queen Mother with some Royal Princesses, and the female relatives of Indian Princes or of persons who have held conspicuous office in connection with India. Badge, the Royal Cypher in jewels within an oval surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. Designation, the letters C I.

Sovereign of the Order

THE KING EMPEROR OF INDIA

Ladies of the Order (C I)

Her Majesty The Queen
 H M the Queen of Norway
 H R. H the Princess Victoria

H. M. The Queen of Roumania
H. B. H. Princess Beatrix
The Ex-Duchess of Cumberland
H. B. H. the Princess Louise (Duchess of Argyll)
H. L. and R. H. Grand Duchess Cyril
H. R. H. The Princess of Hohenzollern-Langenburg
Lady Patricia Ramsey
H. M. the Princess Marie-Louise

Baroness Kinloss

Lady Jane Emma Crichton
Dowager Countess of Lytton
Dowager Baroness Napier of Magdala
Dowager Marchioness of Dufferin and Ava
H. H. Maharani of Cooh-Behar
Marchioness of Lansdowne

Constance Mary Baroness Wenlock

H. H. Maharani Sahib Chhima Bai Gaekwar
H. H. Rani Sahib of Gondal
H. H. the Dowager Maharani of Mysore
Lady George Hamilton
H. H. the Maharani Sahiba of Udaipur
Alice, Baroness Northcote
Amelia Maria, Lady White
Baroness Ampthill

Countess of Minto

Marchioness of Crewe
Frances Charlotte, Lady Chesham
The Lady Willington
H. H. Maharani Chinkoo Raja Sahiba Scindia
Alijah Bahadur of Gwalior
H. E. The Lady Irwin
Countess of Lytton
H. H. the Maharani Regent of Travancore State
Viscountess Goschen
Lady Birdwood

Distinctive Badges—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', 'Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration is to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states—The Government of India have recently had under consideration the question of the position in which miniatures of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the

badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i Hind Medal.

Indian Distinguished Service Medal—This medal was instituted on June 28th, 1907 by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII. and on the reverse a laurel wreath encircling the words For Distinguished Service. The medal, 1½ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon 1½ in wide, with blue edges ½ in wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit—This reward of valour was instituted by the H. L. I. Co. in 1837 to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one third in the pay of the recipient and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points 1½ in in diameter, having in the centre a ground of dark blue enamel bearing crossed swords in gold within a gold circle, and the inscription Reward of Valour, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver with the wreaths of laurel in gold and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark blue ribbon 1½ in in width with red edges bearing a gold or silver buckle according to class.

Order of British India—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army. Since 1878 however any person European or native, holding a commission in a native regiment became eligible for admission to the Order without reference to creed or colour. The First Class consists of a gold eight-pointed radiated star 1½ in in diameter. The centre is occupied by a lion statant guardant upon a ground of light-blue enamel, within a dark-blue band inscribed Order of British India and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band ½ in in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is 1½ in in diameter with dark blue enamelled centre there is no crown on this class and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title Sirdar Bahadur and an additional allowance of two rupees a day and the Second the title of Bahadur and an extra allowance of one rupee per day.

Indian Meritorious Service Medal—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal" but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend Victoria Kaiser-i Hind. On the reverse

is a wreath of lotus leaves enclosing a wreath of palm tied at the base, having a star beneath, between the two wreaths is the inscription for meritorious service. Within the palm wreath is the word India. The medal, $1\frac{1}{2}$ in in diameter, is suspended from a scroll by means of a red ribbon $1\frac{1}{2}$ in wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to EDWARDVS or GEORGIVS.

THE KAISAR-I-HIND MEDAL

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid We have instituted and created and by these presents for Us, Our Heirs and Successors, do institute and create a new Decoration. The decoration is styled "The Kaiser-i Hind Medal for Public Service in India" and consists of two classes. The Medal is an oval shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words 'Kaiser-i Hind for Public Service in India' it is suspended on the left breast by a dark blue ribbon.

THE VICTORIA CROSS.

The announcement made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross, gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following—

Subadar (then Sepoy) Khudadad Khan 129th Baluchis.—On 31st October 1914, at Holbeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

Naik Darwan Sing Negi 138th Garhwal Rifles.—For great gallantry on the night of the 23rd/24th November 1914 near Fostubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches, and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and mines at the closest range.

Subadar (then Jamadar) Mir Dast 55th Ooke's Rifles.—For most conspicuous bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa 23rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Manguisart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety, returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Haylidar (then Lance Naik) Lala 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naik Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When

this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 8th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness, went back for assistance and brought the officer into safety.

Naik Shahamad Khan, 89th Punjabis.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line with in 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two bolt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two bolt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Dafadar Govind Singh, 28th Cavalry.—For most conspicuous bravery and devotion to duty in three volunteering to carry messages between the regiment and brigade headquarters, a distance of 14 miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Rana 23rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew then switching his fire on the enemy bombers.

and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Rescaldar Badlu Singh, 14th Lancers attached 29th Lancers—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan between the river and Kh. es Samarveh Village. On nearing the position Rescaldar Badlu Singh realised that the squadron was suffering casualties from a small hill the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered

to him before he died. His valour and initiative were of the highest order.

Rifleman Gobar Singh Negi, 2nd Battalion 39th Garhwal Rifles—For most conspicuous bravery on 10th March 1915 at Kerve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh, 28th Punjabls.—For devotion and bravery 'quite beyond all praise' in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun and when all the havildars had been killed or disabled he struggled to his feet, called to his assistance two men and charged and recovered the gun restoring it to action. He refused medical attention insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours continual effort and by loss of blood.

PASSPORT REGULATIONS.

A.—British Subjects.

1 British Indian passports are issued only to—(1) British subjects by birth (2) wives and widows of such persons (3) British subjects by naturalization and (4) British protected persons.

2 The Indian Passport Regulations do not require persons to be in possession of passports for leaving India, but as practically every other country requires travellers to be in possession of passports before they are allowed to land at the port of such country travellers are advised to obtain passports before embarkation. Members of His Majesty's Naval, Military, or Air Forces or of the Indian Marine Service travelling on duty and members of the families of such persons when travelling to the United Kingdom on military entitled passages need not have passports.

3 Passports are not required for journeys by sea from Bombay to ports in India or to Burma, nor are passports required for permanent residents of Ceylon or India being British subjects to travel between India and Ceylon. Natives of India travelling to the Federated Malay States or the Strait Settlements require passports unless they propose to continue their journey onward.

4 In order to obtain a passport an application form (showing among other things the reasons for the proposed journey) should be filled in by the applicant and the applicant's declaration certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent or Notary Public resident in India. Copies of the form can be obtained from any District Magistrate from the Commissioner of Police, Bombay by post from the Passport Officer to the Government of Bombay, by personal application at the

Passport Office or from any of the leading Banking and Shipping Agents in Bombay. Small duplicate unmounted copies of the photograph of the applicant and a fee of Rs 3 in cash should be forwarded with the application form. Fees are not accepted in stamps or by cheque.

5 The application form when filled in should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay or should be presented at the Passport Office Bombay.

6 The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 11 a.m. to 4 p.m. daily except on Saturdays when it closes at 1 p.m. and on Sundays and public holidays.

7 As a passport is valid for five years there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing and much inconvenience will be avoided by early application. A notice of at least four days should be given for the preparation of a new passport and at least two days for an endorsement, renewal or visa. The Passport Officer cannot issue passports outside office hours and as the preparations of a passport takes time, applicants who postpone application to the last moment do so at their risk.

Iraq

8 Members of His Majesty's Naval, Military or Air Forces or of the Indian Marine Service in uniform and bona fide Muhammadan pilgrims (Haj or Zair) holding individual pilgrim passes do not require passports for their journey to Iraq. If such pilgrims desire to continue their journey to Ceylon for the purpose of pilgrimage they must obtain a Persian Consular visa in India. All other travellers must be in possession of national passports and visas for Iraq. In the absence of Iraq Consular Officers in

India, visas for Iraq are granted by Passport Issuing Authorities in India on behalf of the Iraq Government subject to the conditions stated below. The Iraq visas are of two kinds—Ordinary valid for all entries into Iraq during a period of twelve months and Transit valid for a single journey only allowing for stay of not more than fifteen days in Iraq. The fee for these visas is the same as for British visas—vide paragraph 17 below. Iraq national passports are valid for return to that country without any further visa or endorsement.

Except in the case of *bona fide* tourists, business representatives and employees of well established firms and persons with definite guarantee of employment in Iraq visas for Iraq will not be granted without the previous permission of the Iraq Government. The Passport Offices will on request ask for this permission by post or if the applicant is prepared to defray the cost by cable. Applicants must state clearly the nature of their business and give one or more references in Iraq to enable the local authorities to make inquiries regarding the purpose of their journey.

With the exception of tourists who may remain for three months in Iraq without registration all persons are required to obtain a permit de séjour from the police within fifteen days of their arrival in Iraq. Travellers are also warned that before departure from Iraq even on a transit visa they must obtain a passport endorsement of departure.

Egypt

9 In the absence of Egyptian Consular Officers in India visas for Egypt are granted by Passport Issuing Authorities in India on behalf of the Egyptian Government. The fee for these visas is the same as for British visas—vide paragraph 17 below. Applicants for non transit visas for Egypt should be able to produce evidence to show that they are in possession of ample and independent means or are the agents of houses of business of good standing or have secured permanent employment in Egypt. In all other cases the previous permission of the Ministry of Foreign Affairs in Egypt is necessary for the visit. Holders of the new form Egyptian passports do not require visas to return to Egypt.

10 Restrictions also exist on travel to various parts of the British Empire and to certain foreign countries. Among these may be mentioned Australia, Canada, Mexico, Mohammedan and Abadan, New Zealand, Palestine, Southern Rhodesia, Union of South Africa, South West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

Foreign Countries

11 Passports for journeys to or through foreign countries require after issue, the visa of the Consul concerned. The addresses of the foreign consulates in Bombay will be found in the appendix below. Visas are, however, not necessary for Austria, Belgium, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxembourg, Norway, Portugal, Sarr, Spain, Sweden, Switzerland and Czechoslovakia, provided the names of these countries are entered on the passport by a British Passport Issuing Authority.

Renewal

12 A passport is valid for five years from the date of issue and is renewable for a further period of from one to five years from the date of expiry of its validity at the option of the holder, but in no case can a passport be extended beyond ten years from the original date of issue. On expiration of this period or, if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required, a new passport must be obtained. Application for renewal must be made in the prescribed form, copies of which may be had from any of the officers mentioned in paragraph 4 above. The fee for renewals is Rs. 1 for each year or portion of a year for which the passport is renewed.

Endorsements

13 A passport is valid only for the country or countries endorsed on it and fresh endorsements from a British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. Fresh endorsements may however be obtained on the passport for additional countries. Passports endorsed as valid for the British Empire are also available for travelling to territories under British protection or mandate not however including Palestine and Iraq for which countries the passport must be specifically endorsed. No fees are payable for endorsements made on British passports but a fee of Rs. 18 is payable for an additional endorsement in it for Palestine.

Marriage

14 A husband on marriage or on remarriage requires a fresh passport.

15 In the case of a joint passport issued in favour of a husband and wife, the latter cannot travel alone on it but should take out a fresh passport surrendering the joint passport for cancellation of her name from it.

B—Foreigners

16 Foreigners proceeding direct to their own country or to, or through, any other foreign country or countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom. The concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Officer. The concession does not apply to India.

Austria, Belgium, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxembourg, Norway, Portugal, Sarr, Spain, Sweden, Switzerland and Czechoslovakia.

17 Foreigners who are subjects of the countries shown in the appendix below and who are travelling to British territories for which a British visa is necessary should first obtain passports from their consular representatives and should then present them to the Passport Officer for visa together with a written statement of the reasons for the journey. British visas are of two kinds, viz. the Non transit and Transit. The fees for these are Rs. 5 0 0 and Rs. 0 0 0, respectively except in the case of nationals of states which levy higher fees, when the retaliatory scale of fees will be applied.

18 Other foreigners should apply for Identity certificates through the Commissioner of Police, Bombay or where such foreigners reside in the mofussil, through the District Magistrate of the district in which they are residing. Small duplicate copies of the applicant's photograph should accompany the application. The fee for an Identity Certificate is Rs 1-8-0.

19 The holder of a foreign passport who has obtained a visa granted by a British Passport Authority outside India for a destination which involves landing in, or passing through India does not need a further visa from the authorities in India.

20 Copies of this notice can be had free of charge on application.

The School of Oriental Studies

This School was established by Royal Charter in June 1919. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion and Customs of those peoples especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and

in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and interesting buildings in Finsbury Circus provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School provides teaching in more than seventy subjects in a considerable proportion of the spoken languages. Instruction is given by teachers belonging to the countries where the languages are spoken as it is the aim of the School to provide as far as possible both European and

Oriental Lectures in the principal languages included in the curriculum

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is now a whole time Reader in Phonetics the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff. Various Scholarships are given.

Patron, H. M. the King, Chairman of the Governing Body, Sir Harcourt Butler, C.B.E., Director, Professor Sir E. Denison Ross, C.B.E., Ph.D.

Teaching Staff.

7. University Professor of Persian and Appointed Teacher (Director).
8. University Professor of Sanskrit and Appointed Teacher

The Fisheries of India

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section has certainly expanded considerably within the last 20 years concurrently with improvement in the methods of transport and increase in demand for fish cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system however exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education the isolation caused by their work and caste and their extreme conservatism are among the most ignorant suspicious and prejudiced of the population extremely averse from amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen and except in large operations on new lines these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras which in 1905 initiated an investigation of the industry both marine and fresh water appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906 and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal and Bihar and Orissa. Bombay the remaining seaboard province has comparatively small fresh water interests compared with Madras and Bengal and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of fishermen in India there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short lived Department of Industries to which this subject was allotted.

Madras.

The Madras coast line of 1750 miles is margined by a shallow water area within the 100 fathom line of 40 000 square miles outside of the mere fringe inshore this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based and so from Ganjam to Negapatnam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best

efforts scarce compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1927-28 the fisher population on the West coast totalled 114 002. The esteemed table fish of the coast consist of the Seer (*Cybinus* or *Scomberomorus*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*), Jew fish (*Scombridae*), Whiting (*Sillago*), Thread fin (*Polyemus*), Sardines (*Clupea*) and Mackerel (*Scomber*) in economic importance however shoaling fish and fish of inferior quality such as Sardine (*Clupea*), Mackerel (*Scomber*), Cut fish (*Arius*), Ribbon fish (*Trachurus*), Goggles (*Caranx crumenophthalmus*) and Silver bolls (*Equula* and *Cassu*) take precedence of the former. Sardine and Mackerel over-shadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (*Katmagiri*) which are engaged in drift netting for bonito seer and other medium sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres the material is largely cured for export.

The Madras Department of Fisheries —

As Government attention has been given in Madras over a longer period to the improvement of fisheries and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future is due in large measure to the wise and cautious plans of Sir F. A. Nicholson who from 1906 to 1918 had the guidance of affairs entrusted to him. In 1906 he was appointed on special duty to investigate existing conditions and future potentialities. In 1907 a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr James Hornell F.L.S., as Director and, is now controlled by his successor Mr B. Sundara Raj M.A., Ph.D. The activities of the Department have greatly expanded since its inception. A Committee constituted by Government to acquire into the working of the Department and make recommendations for its future development have just published their report in two volumes. The Evidence collected by the Committee is an octavo volume of 431 pages and the Report of the Committee is another similar volume of 284 pages. The Report is a remarkable production which summarises the aims and achievements of the Department.

during the last quarter of a century and contains detailed proposals for the expansion of the Department activities in different directions. The whole work of the Department has received a great impetus as a result of the report of this Committee. The Committee have emphasised the true purpose and aim of a technical Department of Fisheries to be essentially the material amelioration of the lot of the sea-going fishermen. The activities of the past 25 years were largely concerned with curing and canning manufacture of oil and guano and safe guarding of Government revenue. Remarkably successful as they were under the able guidance of Sir Frederick Nicholson they seemed somewhat to obscure what should be the primary object and policy of the Department. Technological improvements in curing and canning and allied industries should follow ultimately in the wake of improved catches. Socio economic and humanitarian endeavours however necessary and important in view of the caste system of India could not directly add one fish to the actual catch of the fisherman. The Committee have therefore urged that efforts to improve the professional knowledge of the sea-going fishermen and the catching powers of his craft and tackle which were inaugurated with the question of the trawler in 1926 must necessarily occupy the first place of the departmental programme. The higher staff now consists of five Assistant Directors and an Assistant Biologist. These are respectively in charge of (1) the chank and beche-de-mer fisheries, (2) the Co-operative and educational work and the West Coast fish curing yards, (3) inland pisciculture, (4) deep sea fishing, (5) propaganda for rural pisciculture and (6) biological investigations and fishery research. Other officers have charge respectively sections dealing with technological research, trout fisheries and the fisheries of the Northern Circars. A special staff of officers trained in co-operation have been appointed for intensive work among fishermen. The miscellaneous institutions controlled by the Department consist of a small demonstration cannery, a research station for curing canning and allied industries, a Fisheries Training Institute at Calicut for imparting special training to teachers selected to teach in schools for fisher children of which there were 43 with a total of 3,637 pupils in 1930. All the public fish curing yards which were under the control of the Salt and Abkari Department till 1924 have passed into the charge of the Fisheries Department. It is now possible to introduce the better methods of cure and improved hygiene which the Department has been striving to popularise in all the yards. Due to the transfer of the yards, the Fisheries Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and Peons) in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing the Department sets itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and

quantity of sea fish caught and landed. Statistics have been published since 1925-26 regularly every year in the bulletins.

The activities of the Department are so varied and so far reaching that it is difficult even to enumerate them in the space available much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. (For details see the bulletins of the Department issued from the Government Press Madras). Twenty-four volumes have been issued to date and the twenty-fifth volume is in Press. All this work has been carried on under serious handicaps for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing canning and oil manufacture in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant Fisheries Station Linnur Madras at moderate prices.

Fish Curing—Fish curing is practised extensively everywhere on the Madras coasts. Its present success is due primarily to Dr Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India pressed for the grant to fishermen of duty free salt for curing purposes within fenced enclosures. He advocated much else but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 113 of such yards are scattered along the coast and over 5,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1929-30 was Rs 360,574 and expenditure Rs 389,654.

Pearl and Chank Fisheries—In the absence of the pearl fishery during the year the chank fisheries prospered. An unprecedented number of 412,362 chanks were landed yielding a gross revenue of Rs 250,867 3 2.

The Inland Fisheries—The inland fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as

they are full of water only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel notable for its virtue of living for a considerable period out of water, and various carps including Labeo Catla and the well known favourite of sportsman in India the Mahseer. Cut-fishes and Hilsa. In the Nilgiris the Rainbow Trout has been acclimated and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department the results so far have shown a profit on the operations. To breed the necessary fry 7 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java and Etroplus suratensis which has the excellent attribute of thriving and breeding as well in brackish as in fresh water both protect their eggs while developing, a useful habit. Both the Gourami and Etroplus are largely vegetarian in diet. A further activity is represented by the breeding of small fishes especially adapted to feed upon the aquatic larvae of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito haunted sheets of water, these antimalarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent Government Museum Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia it has been immensely popular with the Public.

Four tanks were added during the course of the year and the construction of a turtle tank is in progress.

Deep Sea Fishing and Research—The fishermen have a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

- (1) what kinds and quantities of fish are available beyond 7 fathoms, and,
- (2) how to exploit these deep sea fisheries economically.

The department's trawler Lady Goschen has been exploring the off shore belt of the sea up to 100 fathoms from Point Calimere to

Madras on the East Coast and Calicut to Pigeon Islands on the West Coast with a view to ascertain the kinds and quantities of fish available there. An Assistant Biologist and staff to work on board the trawler and additional equipment for the Fisheries Research Stations at West Hill and Krusadal Islands were sanctioned by Government during the year. On remarkable discovery made by this systematic survey is that fish of better quality and in larger quantity are available in deeper waters on the East coast from Point Calimere to Madras than on the West coast from Calicut to Pigeon Islands, during the months of the survey. Whether it is the case throughout the year is yet to be ascertained. However it has helped to revise the general belief that fish are much more abundant on the West coast than on the East coast and opens up possibilities for large fishery developments on the East Coast which will ultimately increase the supply of fish food and fish manure.

Rural Pisciculture—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds which number over 106,050 in the Presidency. The work though begun in July 1930 has already completed a survey of ponds in 63 villages suitable for the introduction of quick growing varieties of fish fry. As a demonstration measure two irrigation wells and a big municipal well at Chingleput were stocked with the famous North Indian Carp, Catla.

Welfare Work—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and cooperation. The work has been especially successful on the West Coast. The number of fishermen's cooperative societies in 1929-30 was 60.

An important event of the year was the appointment of 3 cooperative inspectors to assist the Assistant Director of Fisheries (Coast) in intensive work among fishermen. The need for special efforts to promote cooperation among fisherfolk and to renew and stimulate cooperative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all cooperative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Cooperative societies should work under the Fisheries Department. The Cooperative supplying trained inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 3

Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

The new industrial societies were started one at Bilagad and the other at Palapaty on the West Coast in 1927 with the object of weaning the fishermen gradually from the influence of middlemen capitalists. The Government sanctioned a loan of Rs 1,00 each to the two societies for purchasing boats, nets and other accessories for fishing purposes. They are working since 1927 with varying degrees of success.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fishermen. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tanur and Chuliyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Department. In other places schools were opened by the Department at the request of the fishermen. Local men are appointed as honorary managers of schools.

Bengal & Bihar & Orissa

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Raj Shahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea hilsa*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the kalia (*Catla catla*) mrigala (*Cirrhilabrus mrigala*) prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bicki (*Labeo bicolor*) and the mullets are the most esteemed, apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polydora*) pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save sampans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl possibilities of the head of the Bay of Bengal was undertaken the trawler Golden Crown being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam trawling are now much more promising. Trawling companies being floated in the immediate future. The trade is a difficult one to organise and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1912 after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Government has ordered that the Bengal Fisheries Department be reconstituted on an improved basis as soon as funds permit. A Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish by-products apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middlemen) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but the old Department made a beginning and once a few societies can be made successful, the news of the benefits conferred on the members will constitute the best possible form of propaganda. The temporary abolition of the Bengal Fisheries Department was regretted by many and it is hoped that it will soon be revived. The fishery wealth of Bengal is enormous and nothing but good can come of intensive investigation and propaganda.

Fresh water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The

Bamra bangla factories carry on an important local industry of very ancient standing their material is almost entirely obtained from the South Indian and Ceylon shark fisheries already alluded to

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters those of Bombay are concerned save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning, and in the development of minor marine industries particularly those connected with the utilization of by-products. With this end in view the Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922 and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores and for unloading catches. More than this a change is needed in the medieval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish such as kareel, palin, tambura and particularly the ray or skate which formed on the average 25 per cent of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs for a rupee.

Owing to retrenchment the appointments of Fisheries officers have been abolished.

The more important sea-fish are pomfrets, soles and sea-perches among which are included the valuable Jew-fishes (*Scomus* spp.) often attaining a very large size and notable as the chief source of "fish-maw" or "sunda," largely exported from Bombay for oriental manufacture into bismillah. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the month of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours

and hauled at the turn of the tide. The chief catches are bombil (Bombay duck), pomfrets and Jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnastri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hams of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, as shark, ray and Jew-fishes. The edible oyster trade of Karachi was once extensive, the creeks of the Indus producing a species of oyster superior to that found in Bombay and Madras backwaters and estuaries. Unrestricted exploitation of beds of limited extent inflicted great harm, and now, when various salutary restrictions are imposed the beds are slow to respond. Occasionally large deposits of the window pane oyster (*Pincta pinnata*) are found in the Indus creeks and as these produce seed pearls in abundance, Government leased the beds to the highest bidder. The pearls are largely exported to China for use in medicine. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr J. Hornell formerly Director of Fisheries in Madras for the purpose of examining the marine possibilities of the Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl bearing window pane oysters until then unknown, of late years these beds have produced annually from Rs. 15,000 to Rs. 25,000 in revenue perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government continuing their enlightened interest in the fishery developments have had two officers trained in the Madras Fisheries Department and now employ them in development work on the Baroda coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Kathiawar coast and already promise considerable success particularly with regard to pomfrets.

In 1910 Mr W. H. Lucas, Collector of Salt Revenue, drew up a report on the improvement of the sea fisheries in the Bombay Presidency.

The main conclusions at which he arrived were that the Indian consumer is so conservative that new methods of curing, canning etc. have no chance of succeeding without the help of patient demonstration by Government as an initial step towards the investment of Indian capital in a new enterprise, and that therefore the establishment of a Government demonstration fishing station at some large fishing centre on the Ratanagiri or Kanara coast may be found advisable after the results of the Madras Government fishing station have been studied.

In 1930 the Bombay Government asked the present Collector of Salt Revenue to make a fresh survey of the fishing industry in order to bring up-to-date the report by Mr. Lucas which is referred to above.

Burma

The exclusive right of fishing throughout the province of Burma belongs by custom of the country to Government and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish. The work of the fisherfolk, involving as it does the taking of life is generally viewed with disfavour by the Burman Buddhists. In certain tracts this attitude is intensified where the proportion of the fisherfolk is not only small but their economic conditions are more or less demoralised. Though fishing is generally denounced by Burman Buddhists, yet they consume the fish. The usual argument of the consumers is that they have not taken the life of the fish and therefore have committed no sin. Where fishing is the principal means of livelihood of the majority as in some Delta Districts, religious scruples tend to disappear.

Revenue.—The economic value of any industry or tract of country can to some extent be gauged by the revenue it yields. The fisheries yield a substantial revenue (about one-eighth of the total land revenue), and therefore they are one of the most important sources of national wealth. There are two methods of catching fish, namely by nets in the rivers and seas and by traps in leased fisheries. The fishery revenue demand from net licensees amounts to over four lakhs while that from the leased fisheries amounts to more than 41 lakhs. Of the net licensees the greatest revenue comes from Mergal District where not only is the Pearl net industry carried on, but leases for collecting green snails and sea algae are issued. Open lakes, pools of water and small rivers are classed as leased fisheries and are leased by Government to the highest and best bidders at public auction. Here the Irrawaddy Division equals in importance the rest of the province and of the five districts in the Irrawaddy Division Maubin District alone yields as much as half of the whole division. Maubin District therefore stands easily first in respect of fishery revenue, and out of the total collected in any year from the whole province, this district alone contributes about a quarter.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the north,

east and west in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down-country from Upper Burma.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabang and (3) Kathamyoyn. These are generally made into salt fish which fetch Rs. 2 to Rs. 3 per viss. The creek and fresh water fish from fisheries are generally ngakhu, ngayan and ngagyi. Most of them are sold fresh, but some are converted into salt fish. The fish caught in the rivers are generally ngathalauk. Ngagyin and ngamyoynin the predaceous fish.

Fees for net licenses are charged according to the size of the nets. Fisheries which consist of lakes, pools and streams are put up to auction but as no Burman fisherman has ever been known to keep a proper system of accounts, he seldom or never can gauge the real worth of the fisheries. This coupled with his impulsive nature frequently results in his bids at auction exceeding the value of the fisheries. Several fishermen have thus not only brought ruin on themselves but also on their sureties who have not infrequently been sold up. Until these fisheries are brought under some settlement system for revenue assessment, *bona fide* fishermen must suffer from time to time. Moreover, the local authorities demand adequate securities and the furnishing as well as the verifying of these securities invariably mean much expenditure of time and money, both to the fisherfolk and to the Government staff. With a view to ameliorate uneconomic conditions by rendering the provisions of security easier as well as to facilitate collection Government introduced what is known as the group system whereby the value of the fisheries is fixed at a reasonable rental and instead of an individual system of furnishing security, the groups hold themselves severally responsible. It was thought that in order to enable the poorest of the actual workers to reap the benefit of their labours nothing short of a co-operative system would be of any avail. This co-operative system was tried in the Thariawaddy District. In spite of large sacrifices of revenue in allotment of group fisheries on unjustifiably low rents they have not been popular with fishermen have not prevented defaults and have tended to collapse by dispute among the group members and civil suits over their liability for each others defaults.

Another system known as Fair Rent and Tender System was introduced in Maubin as an experimental measure. Under this system the lease is fixed at a fair rent and tenders of premium invited and the lease is given on a consideration of the premium offered, plus the character of the person tendering and his previous connection with the fishing industry. The system, it is reported is unpopular with lessees in spite of the favourable rents and the long-term leases. The Government has now stopped this system altogether. The Fishery Settlement Enquiry which was set on foot in 1923 will, it is

hoped, lead to improvement of the Fishery Revenue Administration. The final report of the Enquiry is not yet out.

The principal articles of manufacture are angui (fish-paste) and salt-fish the manufacturing methods are primitive and with more industrial education and capital, these could be considerably improved.

The Punjab.

The years 1928-29 and 1929-30 were both somewhat hard on the fish and fisheries as well as on the fishermen of the Punjab. The abnormal autumn floods of 1928 and 1929 did considerable damage in the riverain tracts and complaints were received from many districts that fish were very scarce, especially in those through which the Chenab and Sutlej Rivers flow. A large number of fishermen found work at the Head Works at Islam and Basul which took them away from their usual occupation of fishing and hence there was a small drop in the licences issued on the Sutlej and Chenab.

In July 1929 the Carp again spawned in very large numbers in the Government Fish Farm at Chennawan and enabled the Research Officer to make a number of observations but in the summer of 1930 no spawning took place and the department is still at a loss to account for the omission. For five years the fish refused to spawn. In the following two years (1928 and 1929) they spawned in considerable numbers, and again in 1930 showed no activity in this line whatever. Experiments are necessary in a number of places far apart, and a good deal of patient research, to elucidate this problem.

These two years started auspiciously as a pretensions 5 year programme had been presented to Government, and most of it had been approved by a special Committee which sat in Simla to consider it and had received the administrative approval of Government, but had to

be abandoned owing to the prevailing financial stringency.

Trout culture in the Kangra Hills continues to flourish. Another stream was opened to trout fishing during the year and provided fair sport.

The Uhl River in Mandi State (which was stocked by the department) provided excellent sport. One angler caught 18 fish weighing 72 lb his biggest being 84 lb. Another later in the season was fortunate in getting a 14½ lb trout and a number varying between 3 lb and 9 lb.

The Beas and its tributaries in Kulu suffered heavily from a very severe hailstorm in September 1929 when several thousand trout were picked up dead on the banks and an epidemic among the rainbow trout in the Hatcheries very nearly wiped out the stock.

Licences fell from 8,355 in 1928-29, to 5,504 in 1929-30. The Kangra District alone accounted for 2,508 of this deficit, owing primarily to this district being brought into line with the plain districts and during the period of 1928-29 licences extended from 1st January to 1st April.

Travancore

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. Special Schools have been opened for the education of fisher lads.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy but whether or not our earlier administrators realised the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organisation was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commence-

ment, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to over-estimate.

Types of Forest.—More than one fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated, in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated, while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenues.

until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1927 was 231,755 square miles or 22.8 of the total area. This was classed as follows: Reserved 105,285 Protected 8,026, Unclassed State, 117,944.

Throughout this vast forest area scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid Juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking the following main types of forest may be distinguished—

(1) Arid country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kika (*Acacia arabica*) which however in the driest regions exists only by the aid of river inundations.

(2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important comprising as they do the greater part of the oak and sal forests.

(3) Evergreen forests.—These occur in regions of very heavy rainfall such as the west coast of the Peninsula, the eastern sub-Himalayan tract and the moister parts of Burma and are characterised by the great variety and luxuriance of their vegetation.

(4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterised by various oaks, magnolias and laurels while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Deodar deodara*), which occurs most commonly at elevations of 3,000 to 8,000 feet and in association with oaks or blue pine (*Pinus roxburghii*), towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long needled pine (*Pinus longifolia*) which is tapped for resin.

(5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoraceae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the 'sundri' (*Heritiera foetida*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1904 by the classification of the areas under the control of the Department into four broad classes, namely—

(a) Forests the preservation of which is essential on climatic or physical grounds. These

are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosions and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example as the teak forests of Burma, the sal forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(c) Minor forests containing somewhat inferior kinds of timber, and managed for the production of wood fodder, grazing and other produce for local consumption, these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term, but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education Health and Lands. The Inspector General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma where they had long been administered by the Provincial Governments and in 1924 the Reforms Inquiry Committee presided over by the Hon. Sir Alexander Macdonald, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer to its own province.

Territorial charges.—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests, provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service, these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers, heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service. The Forest Service comprises three branches—

(1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 399 officers (com-

sisting of the Inspector General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 263 are to be recruited direct to the service and the balance obtained by promotion from the Provincial Forest Service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules 1928 —

- (a) by nomination in England in accordance with these rules and such supplementary regulations as may be prescribed by the Secretary of State in Council
- (b) by competitive examination in India in accordance with these rules and such supplementary regulations as may be prescribed by the Governor-General in Council,
- (c) by direct appointment in accordance with these rules of person selected in India otherwise than by competitive examination,
- (d) by the promotion in accordance with these rules on the recommendation of local Governments of members of the Provincial Forest Services,
- (e) by the transfer of promotion in accordance with these rules of an officer belonging to a branch of Government Service in India other than a Provincial Forest Service

The Rules provide that all appointments in the Indian Forests Service shall be made by the Secretary of State for India in Council, that no appointment shall be made to the Indian Forest Service by any method other than the five just quoted and that subject to this last mentioned condition, the method or methods of recruitment to be employed for the purpose of filling any particular vacancies in the Indian Forest Service or such vacancies therein as may be required to be filled during any particular period and the number of candidates to be recruited by each method, shall be determined by the Secretary of State in Council.

(2) **The Indian Forest Engineering Service**—This service was created in 1919 and at present consists of 17 Forest Engineers.

(3) **The Provincial Service**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Imperial Forest Service in 1920. Except for five unpromoted officers the class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion to 12½ per cent of the posts in the Indian Forest Service, such promotion being made by the Secretary of State for India. These officers are recruited and trained in India, their

recruitment being a matter for the local Governments. A certain number of posts in the service are filled by the promotion of specially promising Rangers. Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1924, the Provincial Service course ceased to exist from 1928.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras), the Burma Forest School at Pyin Oan (for Burma) and the Madras Forest College at Coimbatore (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912, respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Hardley Wilnot then Inspector-General of Forests of a Forest Research Institute at Dehra Dun. The Forest Research Institute which is under the administrative control of the Inspector General of Forests, is in the charge of a President. There are five main branches of research, namely Silviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. In addition specialists are appointed temporarily when necessary and are attached to the Institute to carry out investigations in subjects of particular economic importance. Thus a paper pulp expert has been employed for some time to investigate possible new sources of paper making materials of which the forests of India contain abundant supplies. Besides this there are the Seasoning and the Timber Testing, and the Wood Preservation experts engaged temporarily on short term contracts. Indian Assistants have been appointed under them to receive the necessary technical training and experience in these subjects, with the object of eventually taking the place of experts if and when properly qualified.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings are being built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this and the employment of specialists in Seasoning, Timber Testing and Wood Preservation steady progress is being made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboo, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products etc. The average annual outturn of timber and fuel from all sources during the quinquennium ended 31st March 1924, the latest date for which statistics are available was 38,06,40,000 cubic feet against an average of 30,72,00,000 cubic feet per annum attained in the preceding quinquennium. The highest figure ever attained under this head occurred in 1921-22, when a total of 38,18,83,000 c ft was reached the year 1923-24 coming next with 35,86,90,000 c ft. The figures for 1921-22 and 1923-24 represent respectively 2.3 and 2.4 c ft per acre of all classes of forests. For reserved forests only the yield in 1923-24 was 3.7 c ft per acre as compared with 3.3 c ft per acre in 1918-19 the last year of the last preceding quinquennium. The year 1921-22 was marked by a phenomenal output of teak in Burma viz., 600,000 tons (30,000,000 cubic feet), which was more than 74 per cent above the average annual output of the preceding quinquennium. With the output of teak for the year the revenue in Burma soared to Rs 2,21,16,788 and the surplus to Rs 1,30,83,992. The total outturn for the five years amounted to 2,478,849 tons, an increase of 751,000 tons, or 44 per cent over the output in the preceding quinquennium.

The figures for the last quinquennium for which a report has been issued show that in 1923-24 the ratio of timber extracted by Government agency to that removed by purchasers was 5 to 29 compared with a ratio of 5 to 27 in 1919-20. During the period the outturn removed by Government agency rose by 41 per cent, whilst that removed by purchasers increased by 19 per cent. Timber and fuel to the value of Rs 11,140 lakhs and minor products, including bamboos and grass valued at Rs 375 lakhs were removed by purchasers during the period. For the quinquennium 1918-19 the figures were Rs 10,190 lakhs and Rs 355 lakhs respectively.

Financial Results of Forest Administration in British India from 1864-65 to 1923-24 (in lakhs of rupees)

Quinquennial period	(Gross revenue average per annum)	(Expenditure average per annum)	Surplus (average per annum)	Percentage of surplus to gross revenue
	Lakhs	Lakhs	Lakhs	Lakhs
1864-65 to 1868-69	27.4	23.8	13.6	36.4
1869-70 to 1873-74	56.3	39.3	17.0	30.2
1874-75 to 1878-79	66.6	45.8	20.8	31.2
1879-80 to 1883-84	88.2	56.1	32.1	36.4
1884-85 to 1888-89	116.7	74.3	42.4	36.2
1889-90 to 1893-94	159.5	86.0	73.5	46.1
1894-95 to 1898-99	177.2	93.0	79.2	44.7
1899-1900 to 1903-04	196.6	112.7	83.9	42.7
1904-05 to 1908-09	237.0	141.0	116.0	45.1
1909-10 to 1913-14	296.0	168.7	132.3	44.7
1914-15 to 1918-19	371.3	211.1	160.2	43.1
1919-20 to 1923-24	551.7	367.1	184.6	33.5

Reviewing the figures of outturn Government in a report issued in October 1925, says: "The results on the whole, considering the general trade depression, are most satisfactory and point to more intensive working of the forests and to better exploitation."

Forest Industries.—The important rôle which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons while 3,000,000 persons, earning 250,000,000 a year were employed in working up the raw material yielded by the forests. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood cutters, sawyers, carters, carriers, raftmen and others working in and near them, employment on an extensive scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope makers, lac-manufacturers, basket-makers and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Native States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 50 years is shown in the following statement, which gives annual averages for quinquennial periods:—

The gross revenue and surplus were Rs 466 2 lakhs and Rs 179.4 lakhs in 1918-19 and Rs 544 9 lakhs and Rs 195.6 lakhs in 1923-24 respectively. The surplus rose from Rs 1,79,42,726 in 1918-19 to Rs 2,19,12,540 in 1919-20, but during the next three years it steadily decreased, rising again to Rs 1,84,80,547 during the last year of the quinquennium. The surplus in 1923-24 represents an average of 2.1 annas per acre of all classes of forest against 1.8 annas in 1918-19. The total surplus rose from Rs 1,79,42,726 in 1918-19 to Rs 1,95,60,945 in 1923-24. Government, reviewing the figures, state. Financially, the Forest Department has had during the quinquennium to undergo a severe strain, even since the slump set in following on the short lived post-war boom in trade. But development solely with a view to increase the resources and earning capacity of the forests has never been lost sight of. Judging by the perceptible improvement in the general financial results all round, it is confidently expected that the improvements initiated in this quinquennial period will produce much better results when the slump ends.

Prospects.—The past work of the Forest Department has already borne fruit, not only in a steady rise of revenue but also in the improved condition of the forests resulting from careful protection and tending. Much has been done in the way of opening up the forests to regular exploitation, but there is still room for enormous development in this respect for there are extensive areas of valuable forest as yet almost untouched, and these represent a vast capital locked up and not only lying idle but even deteriorating. Perhaps the two most pressing needs at present are the introduction of improved silvicultural systems and the extension of roads and other export works to facilitate and cheapen extraction. These two must proceed simultaneously since they are inter-dependent, for it is obvious that timber and other produce can be extracted far more economically if it is available in large quantities within a limited radius than if it is scattered in small quantities over large tracts of country. Indeed this question must often decide whether extraction is possible or not. Silviculture teaches us how to effect this concentration and is therefore the bed rock on which future results, financial and otherwise, must rest. It is of little avail to seek and develop new markets for timbers and other products if these cannot be produced in regular and sufficient quantities and extracted at a reasonable cost.

Forest Products Exploitation.—The exploitation by the Forest Department as a Commercial Department on business lines, of

the great timber forests which are among the most valuable natural assets of the country, continues to attract the special attention of the various local Governments. In Madras, for instance, the working of the Forest panchayat system, whereby the increased knowledge of the difficulties of forest administration which the villager obtains when he has a voice in forest management is bringing home to him an understanding of the necessity for that administration. A further important step taken in regard to forest exploitation was the recruitment of a Chief Forest Engineer and a Logging Engineer from America in Burma the work under way in the Government Timber Depot at Mangoon proves to be of great value to Government from the point of view of revenue and of considerable importance to the public from the point of view of industrial development. Research work on the seasoning of timbers has been started and results which promise to be of great value have already been obtained. Experimental work on the manufacture of furniture and in other similar directions are expected to give a value to a number of different timbers which are at present more or less unknown. The Myittha River Training Works started in 1905, which have since then been continued for the sale of Government teak timber, are of more than departmental interest. These works have also proved of great value to local people inasmuch as they have led to the reclamation of a very considerable amount of land which was previously too low lying and swampy to be fit for cultivation. In the United Provinces, the institution of the Government Sawmill and Turnery the Government Central Wood Working Institute and the Resin Distillery have led to important results. These and many other examples which could be quoted go to show that local Governments are fully alive to the importance of exploiting their forest resources to the fullest possible extent for the benefit of the country.

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber and it is at present held by Messrs Martin & Co. Calcutta. The agency held in England by Messrs W. W. Howard Brothers terminated in December 1926 and the work of marketing Indian timbers in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the Superintendent, Government Printing, India, Calcutta.

AREA OF FOREST LANDS, OUTPUTS OF PRODUCE AND REVENUE AND EXPENDITURE OF FOREST DEPARTMENT

* Includes all forests and public forest lands, as they are now called, included in many provinces all unoccupied waste, often entirely devoid of trees. In the statistics do not necessarily represent the wooded area.

(a) Includes 60,614 square miles for Forests in Shan States.

(b) Excluding figures for Shan States and Karenni.

(c) Including expenditure under the head Imperial Forest College.

(d) Including expenditure under the following heads of the sums stated against them—Imperial (Rs. 59,861), Imperial Forest College (Rs. 9,41,727). Expenditure under the head of the sums stated against them—Imperial (Rs. 59,861), Imperial Forest College (Rs. 9,41,727).

(e) After taking into account deficits under the following heads of the sums stated against them—Imperial (Rs. 59,861), Imperial Forest College (Rs. 9,41,727).

WIRELESS TELEGRAPHY AND TELEPHONY

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co. which operates the cable from Europe to India has become merged in the New Imperial and International Communications Ltd.

For reasons of economy most of the inland wireless stations in India were practically closed down and placed in charge of Care and Maintenance parties which carry out tests twice a month the exceptions being Peshawar Radio which always maintained official communication with Kabul in Afghanistan and Aashgar in China and Jotogh Radio which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuters Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. New wireless stations for aeronautical purposes have been erected at Jodhpur in Bikaner and Gaya. The wireless installations at Karachi and Okhutta have been modified so as to meet all the Wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes are under construction at Chitragong, Akyl, Bandoway and Bassein.

The coast stations however have been maintained in a state of high efficiency and many improvements effected. The application of the Bandot system to the high speed continuous wave wireless stations at Madras Port and Mingalod (Bangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route via Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay stations known as Bombay Radio was located on Butcher Island in the Harbour but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number and now total about 30 000 per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) via Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula via Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In the early hours of March 19 telephonic communication between Bombay and London was established for the first time. The conversations were initiated from the s.s. *Belgenland* a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company.

Safety at Sea.—A noticeable feature of wireless development during the past two years has been the provision of direction finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. Tide beacon is an experiment and is likely to be the first of many others along the coast of India. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta, the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of three kilowatts the same as that of the 21.0 stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 857 metres, and Calcutta on 870 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries which is no inconsiderable item when sets containing five or six valves are employed. Partly with a view to overcoming this problem and to render broadcasting available on two-valve sets in any part of India, the Broadcasting Company investigated the possibility of transmitting simultaneously on long and short waves. It took no action on the results of such investigations.

The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India in the Industries and Labour Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee representative of the non-official public in association with the Departmental officials to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the Subject (now the Hon. Sir Joseph Bhoré) and upon it sit at the present time Messrs V. B. Macbeth and N. M. Dumasia M.L.A. Bombay, H. H. Revell and K. C. Neogi M.L.A. Calcutta, M. B. Colburn M.L.A. and an Adviser to Government in the Posts and Telegraphs Department and B. Rama Rao, Joint

Secretary to Government in the Industries and Labour Dept. It is now proposed to establish a series of additional broadcasting stations in different parts of India so as to spread broadcasting service on low powered sets throughout the land. Important proposals with this purpose in view were discussed by the Advisory Committee in Calcutta in December 1930.

Licenses.—Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licenses for fixed stations for transmitting and experimental purposes are much sought after and despite a careful scrutiny of the applicants more than 300 have been issued. The number of traders in wireless apparatus who are required to take out special Import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Prospects.—The Government of India have always encouraged the development of wireless in India by private enterprise and to this source that India may look in the future for considerably increased internal radio communication. There are two most promising lines of development viz.—

(a) Erection of small sets either for speech or morse in districts where no land lines exist and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either morse or speech at will and if used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(b) The use of radio as a substitute for land line to form the trunk telephone route between two cities which already have telephone facilities.

These would if it is thought open up a new industry which if properly fostered would very soon extend its sales outside the limits of India. It is believed that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and such an industry would find the right kind of skilled labour already in India.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-General and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785, but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on suzerainty before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Herald*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780 and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stockholder in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and

rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Sir Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free though there existed certain regulations which were not enforced, though Lord Clare who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835 which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first news paper in any Indian language was the *Samachar Darpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengal, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Censoring Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858 an era of prosperity and progress opened for the whole country in which the press participated. There were 16 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation but the rise in

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussil*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussil*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act and except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1858 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910 was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to reduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication, (ii) control over publishers of newspapers, (iii) control over the importation into British India and the transmission by the post of objectionable matter, (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found

Repeal of Press Legislation—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending—

- (1) The Press Act should be repealed.
- (2) The Newspapers Incitements to Offences Act should be repealed.
- (3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below:—
 - (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities.
 - (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act.
 - (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained.
 - (d) Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts.
 - (e) any person challenging the orders of Government should do so in the local High Court.
 - (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months.
 - (g) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India.—At the end of 1915 this Association was formed in Bombay. According to the articles of constitution "its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities

to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1838, and was the subject of a minute by Mr James Wilson when Finance Member, in 1859. Again, in 1867 Mr Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a rapprochement on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1842 the Presidency Banks had the right of note issue but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1842 to 1876. In 1842 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. Put very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank—Under the Imperial Bank of India Act (XLVII of 1920), the control of the Bank is entrusted to a Central Board of Governors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board with the previous sanction of the Governor-General in Council may determine. The Central Board of Governors consists of—

- (a) Managing Governors not exceeding two in number, appointed by the Governor-General in Council on recommendation by the Central Board,
- (b) the Presidents, Vice-Presidents and Secretaries of the Local Boards,
- (c) the Controller of the Currency, or other officer nominated by the Governor-General in Council and
- (d) not more than four non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted may be added at the discretion of the Central Board.

The Controller of the Currency and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not to vote under the agreement with Government. The Governor-General in Council is entitled to issue instructions to the Bank in respect of any matter which in his opinion vitally affects his financial policy or the safety of the Government balances, and if the Controller of the Currency or such other officer of Government as may be nominated by the Governor-General in Council to be a Governor of the Central Board shall give notice in writing to the Managing Governors that he considers that any action proposed to be taken by the Bank will be detrimental to the Government as affecting the matters aforesaid such action shall not be taken without the approval in writing of the Governor-General in Council. Under the Imperial Bank of India Act provision was made for the increase of the capital of the Bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11½ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,37,50,000 and the Balance Sheet of 30th June 1930 showed the Government balance at Rs. 13,91,45,199, other deposits at Rs. 70,03,57,913 and Cash Rs. 10,96,74,750 with a percentage of Cash to liabilities of 20.001.

Class of Business—The Imperial Bank of India Act follows the Presidency Banks Act of 1876 in defining absolutely the class of business

in which the Bank may engage, though the older limitations are modified in some minor points. It permits for the first time the constitution of a London Office and the borrowing of money in England for the purpose of the Bank's business upon the security of assets of the Bank, but not the opening of cash credits, keeping cash accounts or receiving deposits in London except from former customers of the Presidency Banks. The Act provides for an agreement between the Bank and the Secretary of State, and this agreement, which was signed on the 27th January 1921 and is for a period of ten years determinable thereafter by either party with one year's notice, provides, *inter alia*, for the following important matters—

- (1) All the general banking business of the Government of India is to be carried out by the Imperial Bank

- (2) The Bank will hold all the Treasury Balances at Headquarters and at its branches. This involves the abolition of the Reserve Treasury system.
- (3) Within five years the Bank undertakes to open 100 new branches of which the Government of India may determine the location of one in four. The branches and agencies of the three Presidency Banks prior to the date of amalgamation numbered 69, including the Colombo branch of the Bank of Madras. The Bank of Bengal had no branches prior to the proposal to transfer Government business to the Bank in 1901-02 but no less than 18 branches were established before 1868.
- (4) The management of the Public Debt will continue to be conducted by the Bank for specified remuneration.

In Schedule 1, Part 1, of the Act the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1

Briefly stated, the main classes of business sanctioned are —

- (1) Advancing money upon the security of —
 - (a) Stocks, &c., in which a trustee is authorised by Act to invest trust moneys
 - (b) Securities issued by State aided Railways, notified by the Governor General in-Council
 - (c) Debentures, or other securities issued under Act, by, or on behalf of, a District Board
 - (d) Goods, or documents of title thereto deposited with, or assigned to the Bank
 - (e) Accepted Bills of Exchange or Promissory Notes.
 - (f) Fully paid shares and debentures of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in a, b, c, d and, if authorised by the Central Board in e

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge

(3) Drawing, accepting, discounting, buying and selling bills of exchange and other negotiable

securities payable in India and Ceylon and, subject to the directions of the Governor-General in Council the discounting, buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved

- (4) Investing the Bank's funds in the securities referred to in (1) a, b, c
- (5) Making Bank Post Bills and Letters of Credit payable in India and Ceylon
- (6) Buying and selling gold and silver
- (7) Receiving deposits
- (8) Receiving securities for safe custody
- (9) Selling such properties as may come into the Bank's possession in satisfaction of claims
- (10) Transacting agency business on commission.
- (11) Acting as Administrator, for winding up estates
- (12) Drawing bills of exchange and creating letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for *bona fide* personal needs
- (13) Buying, for the purpose of meeting such bills, &c., bills of exchange payable out of India at any time not exceeding six months
- (14) Borrowing money in India
- (15) Borrowing money in England upon security of assets of the Bank, but not otherwise

The principal restrictions placed on the business of the Bank in Part 2 are as follows —

- (1) It shall not make any loan or advance —
 - (a) For a longer period than six months,
 - (b) upon the security of stock or shares of the Bank
 - (c) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property

party or documents of title thereof
(2) The amount which may be advanced to any individual or partnership is limited

(3) Discounts cannot be made or advances on personal security given unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership

The Balance Sheet of the Bank as at 30th June 1930 was as follows —

LIABILITIES	Rs a p	ASSETS	Rs a p
Subscribed Capital	11 25 00,000 0 0	Government Securities	26 98 02,707 7 0
Capital paid up	5 02 50 000 0 0	Other authorised Securities under the Act	27 171 353 1 11

THE EXCHANGE BANKS

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the Continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India, but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their opera-

tions in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India.

No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years

**TOTAL DEPOSITS OF ALL EXCHANGE BANKS

Exchange Banks Investments.

Turning now to the question of the investment of the Banks resources so far as it concerns India this to a great extent consists of the purchase of bill drawn against imports and exports to and from India

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawers of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1929 of the undermentioned Banks will give some idea of this

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT

	£
Chartered Bank of India, Australia and China, Ltd	8,696,000
Eastern Bank, Ltd.	1,136,000
Hongkong and Shanghai Banking Corporation	8,985,000
Mercantile Bank of India, Ltd	2,304,000
National Bank of India, Ltd	4,974,000
P & O Banking Corporation, Ltd	3,787,000
	29,862,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal —

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail

An interesting event in Indian Banking history is the recent entry in the Banking field here of one of the English "Big Five". This has been brought about by the acquisition of the business of Cox & Co by Lloyds Bank

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1920—

In Thousands of £

JOINT STOCK BANKS

Previous to 1906 there were few Banks of this description operating in India and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new formations and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events of ten years ago confidence has been largely restored. But in April 1923 the Alliance Bank of India suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets—

In Lakhs of Rupees

INDIAN PRIVATE BANKERS AND SHROFFS

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in some thing after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawer. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz., (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shown that this class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking however a charge of two annas per cent, per mensem above the Bank rate of discount, or 1½%, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur respectively the business elsewhere than at the Head Offices being carried on by Mooolims who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE

Formerly each Presidency Bank fixed its own Bank Rate and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted at

The following statement shows the average constituted —

a rate at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

Bank Rate since the Imperial Bank was

Year	1st Half year	2nd Half year	Yearly average
1921	5 0.35	5 1.00	5 57.1
1922	7 1.32	4 6.10	5 82.1
1923	7 4.10	4 5	5 95.0
1924	5 0.16	5 2.15	5 68.2
1925	5 5.85	4 7.0	5 64.3
1926	5 5.51	4	4 82.5
1927	5 5.08	4 9.56	5 73.2
1928	5 9.45	5 4.5	5 2
1929	5 5.78	5 7.88	5 33.3
1930	5 5.08		

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day, at the time fixed to deliver all cheques he may have negotiated on other members

and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agree with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below —

Total Amount of Cheques Cleared Annually

In lakhs of Rupees

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles) the East Indian Railway, Bombay to Ahyon (33 miles) Great Indian Peninsula Railway, and Madras to Arkonam (39 miles) Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great tribute of 1853, wherein after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1858 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian, (2) the Great Indian Peninsula, (3) the Madras, (4) the Bombay, Baroda and Central India, (5) the Eastern Bengal, (6) the Indian Branch, later the Oudh and Rohilkhand State Railway and now part of the East Indian Railway, (7) the Sind Punjab and Delhi now merged in the North Western State Railway, (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital for this was the only condition on which investors would come forward. This guarantee was five per cent coupled with the free grant of all the land required, in return the companies were required to share the surplus profits with the Government after the guaranteed interest had been met. The interest charges were calculated at 2½% to the rupee. The Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. While the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the enormous ignorance of local conditions, the result was that by 1869 the deficit on the Railway budget was Rs 166 lakhs. Seeking for some more economical

method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1862-65), since absorbed by the Great Indian Peninsula, the Bengal Nagpur (1868-87), the Southern Maratha (1882) and the Assam Bengal (1891) were constructed under guarantee but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1870, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted—the Nilgiri, the Delhi Umballa, Kalka, the Bengal Central, and the Bengal North Western. The first became bankrupt, the second and third received guarantee, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad-gauge, during the next ten years there were opened 4,289, making the total 8,494 (on the broad gauge 6,562, the metre 1,865, and narrow 87). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Kharal and Bolan Passes were enormously costly. It is said that they might have been ballasted with rupees, the long tunnel under the Khojak Pass added largely to this necessary but unprofitable outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line so that the dividend might rise to four per cent but the rebate was limited to 20 per cent of the gross earnings. Under these conditions, there were promoted the Ahmedabad Prantel, the South Behar and the Southern Punjab although only in the case of the last were the terms strictly adhered to. The Barni Light Railway on the two feet six inches gauge entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks, they were revised in 1896 to provide for an

absolute guarantee of 3 per cent with a share of surplus profits, or rebates up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent with equal division of surplus profits over 5 per cent in both cases. At last, the requirements of the market were met and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Government in Madras, Punjab, Burma and Bombay.

Railway Profits Commence

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The

falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chonab and Jhelum Canals, the North Western became one of the great grain lines of the world choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon 22 millions a year. In the following year there was a relapse. Bad harvests in India accompanied by the monetary panic caused by the American financial crisis led to a great falling off in receipts. Just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,340,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,673,000. Although in a country like India where the finances are mainly dependent upon the character of the monsoon the railway revenue must fluctuate there was no reason to anticipate a further deficit but the net railway gain decreased to £3,767,000 in 1920-21 and there was an actual loss of £4,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921 this loss was changed into a gain of £813,000 in 1922-23.

The results in succeeding years showed further improvements as will be seen from the following statements—

	Contribution to General Revenue	Railway Revenue Fund	Total Gain
	£	£	£
1921-24			4 477 712
1924-25	4 941 787	4 625 985	9 577 772
1925-26	4 135 644	2 854 946	6 990 590
1926-27	4 480 045	1 108 433	5 594 478
1927-28	4 707 239	3 440 000	8 167 239
1928-29	3 933 832	1 977 892	5 871 729
1929-30	4 388 040	1 581 650	5 967 690

Receipts have been converted into £ at the average rate of exchange for the year.

There was however a definite set back during 1929-30 due to the general world depression which was accentuated in India by the activities of the Congress Party which interfered with the normal flow of trade with disastrous results to the finances of India as well as to those of Indian Railways. The net gain to the Central Government from the works of its railways in the year amounted to £3,027,300 which was £2,829,750 less than those of 1928-29 and as the

contribution payable to general revenues amounted to Rs. 48,900 lakhs. It was necessary to draw Rs. 100 lakhs from the Railway Reserve fund to meet this charge. The results of 1930-31 have shown no improvement and up to 14th February 1931 the gross earnings of Indian Railways were about Rs. 227 lakhs less than those of the similar period of 1929-30. The revised estimate for 1931-32 presented with the Railway Budget estimate for 1931-32 allows for total receipts of Rs. 90 lakhs, a reduction of Rs. 12 lakhs compared with the original estimate, while the total charges, although Rs. 15 crores below the original estimate, were estimated to amount to nearly Rs. 102 crores. Railways were therefore faced with a loss of Rs. 12 crores in addition to which Rs. 74 crores have to be found as a contribution to General Revenue. It will accordingly be necessary to draw Rs. 10 lakhs from the Reserve fund. The budget estimate for 1931-32 allows for total receipts of Rs. 102 crores and total charges of Rs. 101.25 crores and as the contribution to General Revenue will be 1.25 crores, it will be necessary to draw a further Rs. 1.75 crores from the Reserve fund.

Contracts Revised

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five most important guaranteed lines made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fail was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed the Government exercised their right of purchasing the line paying the purchase money in the form of terminable annuities derived from revenue currying with them a sinking fund for the redemption of capital. The rail was thus became a State line, but it was reassigned to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expired, the Government will come into receipt of a clear yearly income of upwards of £2,700,000 equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian because, in addition to serving a rich country by an easy line, it possesses its own collieries and mines cheap coal. But with allowances for these factors all the other guaranteed companies which have been assigned under similar conditions as their contracts expired, have proportionally swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges.

According to one estimate it should be £50 millions. But even if that figure be taken Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagla Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Delhi was needed, but the poor commercial prospects of the line and the opposition of the Raj of Cutch to any through line in his territories, has for some time kept this scheme in the background. The possibilities, however, of this construction being undertaken have improved considerably, and a detailed survey is being carried out. There does not exist any through rail connection between India and Burma, although several routes have been surveyed. The momentous character of the region to be traversed and the easy means of communication with Burma by sea, ruin this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed by the shortest route the Manipur route and the Huking valley route. The Manipur route, systems of Northern and Southern India will also probably one day be completed and a direct broad-gauge connection with Delhi a project that has been investigated more than once but cannot at present be financially justified. These works are however subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with loaders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose and a small Committee sat in London under the chairmanship of Lord Curzon to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year, even this reduced sum could not always be provided.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. At

traffic developed the Indian Railways out grew this dry nursing, and when the original contracts expired and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organisation and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1906 to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy, he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies an informal mission was undertaken by Lord Inchausti to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was however revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organisation was further fully examined by the Aeworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1922.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the State-worked systems aggregating 18,494 miles in on the 31st March 1922,

(b) the representative of the predominant owning partner in systems aggregating 29,461 miles,

(c) the guarantor of many of the smaller companies, and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The statement of the varied responsibilities of the Government of India in regard to railways might be extended almost indefinitely. It will perhaps be sufficient to mention only the complications that may and do arise owing to the very considerable railway mileage in Indian States. In the exercise of all these functions the Railway Department is a Department of the Government of India. Its policy must be in accord with the policy of the Government as a whole and every decision must be made with that consideration in mind. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Aeworth who expressed the unanimous opinion that material changes were necessary in the constitution of the Railway Board. Amongst their recommendations they advised the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not as was the President, subject to be out voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1924. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from

November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board

The reorganization carried out in 1924 had for one of its principal objects the relief of the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past. This object was effected by placing a responsible Director at the head of each of the main branches of the Board's work namely, Civil Engineering, Mechanical Engineering, Traffic and Establishment. The former Chief Engineer and the Chief Mechanical Engineer, who had been employed mainly in executive work, became Directors and together with the Directors of Traffic and Establishment have been made responsible for the direct disposal of the work of their branches under the general orders of the Railway Board.

The posts of Joint Secretary and 4 Assistant Secretaries were replaced by 6 Deputy Directors working under the Directors and in charge of branches dealing with Establishment Works, Projects, Stores, Statistics and Traffic. One Assistant Director was also added to supervise the Technical Branch and the Drawing Office. The disposal of the general work of the Railway Board was provided for by the continuance of the post of Secretary.

The position of the Board as a Department of the Government of India has been maintained and it works under the Member for Commerce and Railway. As already stated the Chief Commissioner is the Secretary to the Government of India in the Railway Department and orders issued by the Board over the signature of the Secretary are orders of the Government of India.

Experience of the working of this organization during 1924-25 and the decision agreed to by the Legislative Assembly in September 1924 to separate railway finances from the general finances of the country made it necessary to appoint a Deputy Director and an Assistant Director of Finance. An Assistant Director of Statistics was also added during that year. Later a Director of Finance was added to the establishment occupying, as regards disposal of work, the same position as the Directors referred to above.

Further experience of the reduction of work resulting from the large delegation of powers and responsibility to the Agents of State-managed Railways and the Board of Directors of Company-managed railways enabled a rearrangement of work to be made during 1925-26 accompanied by a reduction in the staff. Under this rearrangement the posts of 3 Deputy Directors, an Assistant Director and the Assistant Secretary were held in abeyance. The personal work was transferred from the Directors of Establishment to the Secretary and a temporary post of Deputy Secretary was created. Further a separate technical office was established to take charge of the technical

work of the engineering branches. The Technical Officer also acted as *ex-officio* Secretary to the permanent Standardisation Committees which had been appointed to deal progressively with all questions of standards of equipment.

The necessity of some central organisation to co-ordinate the publicity work carried out on railways and to undertake on its own the many forms of railways publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st, 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular. The temporary appointment of a Deputy Director to assist the member in dealing with Labour questions has been approved and the question of making this appointment permanent is now under consideration. The appointment of a third member has relieved the Member General of some of his duties and enabled him to concentrate more on transportation and commercial questions. He is now called Member Traffic while the remaining member who is responsible for civil and mechanical engineering questions is known as Member Engineering.

Under the Railway Board's policy of progressive standardisation it is proposed to standardise all classes of materials, plant and rolling stock commonly in use on the railways and as a Central Standardisation Office has been established under a Chief Controller of Standardisation to provide the means whereby such standardisation will be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board has now been transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board therefore consists of 5 Directors, 6 Deputy Directors, 1 Assistant Director, a Secretary and a Deputy Secretary in addition to the Controller of Railway Accounts and his officers to the Chief Publicity Officer and the Officers in the Central Publicity Bureau and to the Chief Controller and the officers in the Central Standardisation Office. The Assistant Director of Statistics has been transferred to the office of the Controller of Railway Accounts.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted by the Legislative Assembly in September 1925 a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from

Accounts led to greater efficiency a similar organisation was introduced on other State managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railways Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of the Company managed railways are still on a departmental basis with a Traffic Manager, Chief Engineer Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation. State managed lines have generally adopted the divisional organisation with a Chief Operating Superintendent, Chief Commercial Manager, Chief Engineer, Chief Mechanical Engineer, Controller of Stores and Chief Accounts Officer.

Clearing Accounts Office

A Clearing Accounts Office with a Statutory Audit Office attached thereto was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office. On the 1st January 1927 the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern

Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Accounts Office and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate systems and of decentralisation of traffic accounts work no definite decision has yet been arrived at.

The Railway Conference

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways. It elects a President from amongst the members, and has done much useful work.

The Indian Gauge.

The standard gauge for India is five feet six inches. When construction was started the broad gauge school was strong, and it was thought advisable to have a broad gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre gauge lines provisional; they were to be converted into broad gauge as soon as the traffic justified it. Consequently they were built very light. But the traffic expanded with surprising rapidity and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So except in the Indus Valley where the strategic situation demanded an unbroken gauge the metre gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. There are not yet connected but the necessary link from Khandwa by way of the Nizam's Hyderabad Gollavari Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2-6 and 2-0 gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2-6 gauge there has been a tendency to construct feeder lines on this rather than on the metre gauge.

The following statement brings out the more important features of the operation of Indian railways during the year 1929-30 together with similar information for the year 1928-29—

Mileage open on the 31st March—

	1928-29	1929-30
1 Single line	37,882 ½	38,149 74
2 Double line or more	3,586 75	3,573 99
3 Total route mileage	40,469 70	41,723 73
4 Total track mileage	58,456 96	56,474 74

Capital and Revenue Earnings and Expenditure—

5	Total capital at charge including ferries and expense on open line	Rs	8,31,39,30,000	4,56,74,62,000
6	Gross earnings	"	1,18,86,82,000	1,16,06,14,000
7	Gross earnings per train mile	"	6 38	6 08
8	Working expenses	"	78,59,35,000	76,43,72,000
9	Working expenses per train mile	"	3 95	3 94
10	Net earnings		45 24 11 000	39,70,57,000
11	Percentage of working expenses to gross earnings		62 77	
12	Percentage of net earnings on total capital outlay		5 32	

Equipment—

13	Locomotives		9,442	9 474
14	Passenger carriages		20,220	20,412
15	Other passenger vehicles		5,504	5,644
16	Goods stock		2,35,553	225 922
	Rail motors		32	36
	Steam coaches		27	83*
	Electric motor coaches and trailers		307	367

Passenger Traffic—

17	Number of passengers carried		620 110 100	634,297,400
18	Passenger miles		2,097,136,000	23,053,000 000
19	Average journey	Miles	35 6	36 3
20	Earnings from passengers carried	Rs	38,24,89,000	38,08 93 000
21	Average rate charged per passenger per mile	Pies	3 32	3 21
22	Total coaching earnings	Rs	44,49,89,000	44,67,18,000

Goods Traffic—

23	Number of tons carried		90,835,000	87,376,000
24	Net ton miles		21 889,177,000	21,524,687,000
25	Average haul		241 0	210 4
26	Earnings from tonnage carried	Rs	71 10,55,000	68,82 76,000
27	Average rate charged for carrying a ton of goods one mile	Pies	6 24	6 14
28	Total goods earnings		71,46,41,000	68,09,44 000

Number of employees

808,433† 819,058

* Includes 10 steam trailer coaches

† Revised figures

At the close of the year 1929-30, the total capital invested in railways was Rupees 8,31,39,30,000 represented by a property which in terms of route mileage amounted to 41,724 miles of railway. This property brought in to the owners a return of 4 74 per cent on the capital at charge. Similar figures for the railways owned by the State are —

	Rs
Total capital at charge	7 65,12 25,000
Total route mileage	31,218
Return on capital outlay	4 38

State versus Company Management —
The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they

manage and the headquarters of their boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unani-

mostly in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 42 million pounds to General Revenue during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1½ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will however need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere where State ownership has been the rule, has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsula Railway followed suit. The Nadi Jubulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st 1929 the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs. 702 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances has been under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921 the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Macmurchison Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council, — that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways —

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent on the capital at charge surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in

(a) forming reserves for

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation,

(iii) writing down and writing off capital

(b) the improvement of services rendered to the public,

(c) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be prescribed by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will as at present be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways.

When introducing this resolution the Hon ble Member for Commerce stated that it had been represented to him that there was a general feeling in the House that before the House was asked to commit itself to those proposals it should be allowed to refer them to a committee of the House. He further stated that he had no objection to this course provided that the committee met rapidly. This was agreed to and members were appointed.

The committee met twice and considered the resolution but was not able within the time allowed to satisfy itself fully as to the effect of the proposals in the resolution on the control of the Assembly over railway finance and policy and as to the amount and form of contribution to be paid by the railways to general revenues. In the circumstances, the committee recommended that the consideration of the resolution be adjourned till the autumn session to allow the committee further time for examination. Government raised no objection to this proposal and it was agreed to by the Assembly.

The resolution was further examined by the Standing Finance Committee in September and as a result of the views expressed by the committee and in the Assembly certain modifications were introduced. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/8th per cent on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 1/2 of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 1/2 was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a deprecia-

tion fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodical revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

Re organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23 and entailed—

(a) the separation of the commercial and operative duties of the Traffic Department,

(b) the separation of the mechanical and running duties of the Locomotive Department,

(c) the fusion of the operative duties of the Traffic Department with the running duties of the Locomotive Department.

Under the new organisation there is now—

(1) a Chief Transportation Superintendent in charge of all operating functions,

(2) a Chief Traffic Manager in charge of the commercial side of the railway,

(3) a Chief Mechanical Engineer in charge of the design and construction of rolling stock and of all repairs and renewals of rolling stock carried out in the central workshops.

This organisation is more or less similar to the divisional organisation found on most American Railways with the exception that the engineering Department works on a departmental basis. This, however has been changed and the maintenance of Way and Works has been brought into the divisional organisation while new construction remains outside.

A somewhat similar organisation was introduced on the North Western Railway from 1st October 1924, except that it follows rather the organisation in force on the South African Railways where the railways are divided into a number of areas or divisions each under one

chief officer and all reporting to the General Manager who is assisted by a number of principal officers in charge of definite phases of the working. A similar organisation was also introduced on the East Indian and Oudh and Rohilkhand Railways early in 1925.

Investigation into the present form of Railway Accounts—The investigation by Sir Arthur Dickinson into the system of accounts followed on Indian railways, was completed in March 1927 and his report submitted in August 1927. It has been found possible to adopt certain of his proposals and further investigations are being carried out concerning some of the others.

Standing Finance Committee for Railways—The Committee met 12 times in 1929-30 and besides scrutinising the capital programmes of railways and discussing the budget proposals for 1930-31 they considered various proposals affecting railway staff including the revision of rates for the reorganisation of certain departments and the creation of a number of superior appointments. They devoted considerable attention to the proposed improvements in the conditions of service of railway servants with special reference to the Hours of work (Washington) and Weekly Rest (Geneva) conventions and numerous other questions were also considered.

Central Advisory Council for Railways—During the year 1929-30 one meeting of the Central Advisory Council was held at Sholoi on the 21st September 1929.

The subjects discussed were—

- (1) Railway Supply Committee report of June 1929
- (2) Publicity of the proceedings of the Central Advisory Council for Railways
- (3) Assistance from railway funds to railway employees for the education of their children
- (4) Improvement in the standard of comfort for passengers

Imperial Indian Mail—A new standard of travel in India was instituted in November 1926 by a weekly service between Bombay and Calcutta in connection with the English Mail steamers.

The Imperial Indian Mail as the train is called is the joint service of the East Indian and Great Indian Peninsula Railways. The popularity of the train has been firmly established and during the seasonal months the accommodation has been filled to capacity. The special features of this train are the provision of a parlour car a compartment for luggage wanted on journey bedding the services of an experienced conductor and staff and high class catering. The train is staffed throughout giving passengers access to all parts without the necessity of waiting for station halts. Accommodation is provided for 32 passengers in 14 two-berth and 4 single berth compartments. Seven of the two-berth compartments have two lower berths and the remainder a lower and an upper berth. The additional floor space in the latter compartments enables two easy chairs to be provided. The interior of the Imperial Indian Mail is finished in cream and gold and the service as a whole compares favourably with the finest luxury train service provided by any railway in the world.

There are in addition many other good services on Indian Railways among which the Frontier Mail on the B & C and N & W Railways is probably the best known. This train runs between Bombay and Peshawar and has reduced the time of the journey between Bombay and Delhi by over 4 hours. Generally speaking the Mail train on railways have been speeded up and the service given now compares favourably with that found in other countries taking into consideration the difficult conditions with which railways in India have to contend.

Earnings—Of the total earnings on all Railways of Rs 110.08 crores Rs 68.83 crores of 19.3 per cent were from goods traffic Rs 38.58 crores or 33.2 per cent from passenger traffic and Rs 8.67 crores or 7.9 per cent from parcels traffic and miscellaneous earnings.

Passenger Earnings—Passenger earnings showed an increase of approximately one per cent from Rs 34.24 to Rs 35.68 crores. The following table shows the numbers of passengers from passengers separately, for each class for the 4 years previous to the War and for the 5 latest years.

Year	Number of passengers carried (in thousands)				
	1st Class	2nd Class	Inter	3rd Class	Season & Vendor's tickets
1910	685	2 784	10 702	315 539	24 341
1911	703	2,947	11 408	331 055	25 687
1912	700	3 030	10 508	3,38,789	26 810
1913-14	715	3 253	12 000	390 412	30,111
1925-26 †	1 033	9,901	18,602	574 808	
1926-27 †	1 012	10 006	14 945	578 409

† The number of season and vendor tickets and their earnings have been included under the respective classes the former at the rate of 50 single journeys per month

Rates Advisory Committee

The Rates Advisory Committee was constituted in 1926 to investigate and make recommendations to Government on the following subjects —

- (1) Complaints of undue preference,
- (2) Complaints that rates are unreasonable in themselves
- (3) Complaints or disputes in respect of terminals
- (4) The reasonableness or otherwise of any conditions as to the packing of articles specially liable to damage in transit or liable to cause damage to other merchandise
- (5) Complaints in respect of conditions as to packing attached to a rate
- (6) Complaints that Railways do not fulfil their obligations to provide reasonable facilities under Section 42 (3) of the Indian Railways Act

The Committee reported on the following nine cases that had been referred to them during 1929-30 —

- (i) Complaint from Messrs Chaturvedi Jamma Prasad & Co Jaunpur in regard to the rates charged for biddy leaves over the Bengal Nagpur Great Indian Peninsula and East Indian Railways from Birjampur to Jaunpur
- (ii) Complaint from Messrs Sheo Dayal Ramji Dasa, Jaunpur against the East Indian Railway in connection with the rates for salt from via Larn pore to certain stations which it was alleged, were on a higher basis than the corresponding rates on another line

- (iii) Complaint from the Sri Ranga Vilas Ginning Weaving and Spinning Mills (Bombay) regarding the rate charged for yarn from Calcutta to Shalimar over the South Indian Madras and Southern Mahratta and Bengal Nagpur Railways which it was alleged constituted preferential treatment owing to a lower rate being charged for similar traffic from Madras to Shalimar
- (iv) Complaint from the proprietors of a rice mill at Chakula regarding the alleged high rates charged over the Bengal Nagpur Railway for rice and paddy to and from Chakula
- (v) Complaint from the Calcutta Chamber of Commerce against the Madras and Southern Mahratta Railway for not allowing for raw materials for the manufacture of manure the same rates as were being allowed on the South Indian Railway
- (vi) Complaint from the Kalyanpur Line Works Calcutta regarding the alleged unreasonableness of rates over the East Indian Railway for lime from Delhi-on Sonu to Howrah and certain stations on the Bengal and North Western Railway as compared with the corresponding rates from certain competing centres on the Naini Jubbulpore section of the Great Indian Peninsula Railway
- (vii) Complaint from certain sugar factory proprietors at Sawanore regarding the rates for jagree over the Bengal and North Western Railway when consigned to stations on other railways via Sawanore the allegation being that the rates were unduly high

(viii) Complaint from certain fruit dealers in Calcutta regarding the minimum weight condition applicable for a rate quoted by the East Indian Railway for mangoes from via Mokameh Ghat to Howrah being too high to enable them to take advantage of the rate

Of these eight cases the last mentioned was compromised when it came up for hearing before the committee. The first five were reported on by the committee during the year under review and the recommendations made by them, which were all in favour of the railway administrations concerned, were accepted by Government. The committee also reported on two other cases which had been referred to them during the previous year. These were —

(a) Complaint from a dealer in marble regarding the high rates charged from Bombay to stations on the South Indian Railway over the Great Indian Peninsula, Madras and Southern Mahratta and South Indian Railways

(ii) Complaint from the Burhanpur Tapi Mill regarding the rate for piecegoods from Burhanpur to Calcutta being higher than from Bombay to Calcutta which it was alleged constituted preferential treatment

The recommendations of the Committee in both these cases in the first in favour of the complainant and in the second in favour of the railways concerned were accepted by Government

At the close of the year the committee had under investigation two out of the eight cases referred to them during the year and one dealing with the question of the levy by the Assam Bengal Railway of terminal charges on loose jute which had been referred to them in October 1928. The enquiry in this latter case has been prolonged owing to the necessity for compiling detailed statistics showing the earnings from terminal charges and the expenditure on terminal facilities

Inauguration of the Main Line Electric Service, G. I. P. Railway

The inauguration of the newly electrified main line section of the G. I. P. Railway from Kalyan to Poona which was performed by H. P. Sir Frederick Sykes, Governor of Bombay on Tuesday 5th November 1929, constituted the first railway main line length of track to be electrified in India and connected with the electrification scheme is that of the elimination of the Dhore Ghat Reversing Station. The problem of eliminating the Reversing Station has been seriously considered on several occasions in the past but it was not until 1923 when electrification had been definitely decided upon, that final survey operations became imperative

Apart from the location of the realignment which called for the adoption of methods not usual in ordinary survey practice, the works involved in the construction of this double line broad gauge section of railway were of considerable magnitude chiefly in the form of heavy tunnel construction

There are three tunnels in all aggregating 4,598 feet or 87 of a mile. The longest of these is 3,100 feet built throughout on a curve of the sharpest radius which occurs in these ghats. Allowing for curvature and the considerably increased spacing of tracks necessitated by the adoption of the latest standard dimensions, a tunnel section of 34 feet 6 inches wide and 24 feet 6 inches high was decided upon. This is considered to be the largest tunnel section in the world

The steam trains to Poona took approximately 6 hours for the journey and it is anticipated that with electric traction this timing will be now reduced to approximately 3 hours

With the opening of the electrified section between Kalyan and Igatpuri in October 1930 it is believed that the G. I. P. Railway has the greatest length of electrified main line in the British Empire and the entire scheme will be one of the most important main line electrifications in the world

Publicity.

The year 1929-30 marked a very considerable advance in the publicity activities of the Indian railways. The Central Publicity Bureau of the Railway Board was inaugurated on 1st April 1927 a Chief Publicity Officer was appointed and provided with an Assistant and a small clerical staff. The office was located in Victoria Terminus Bombay it being felt that to commence with, Bombay's position as the main port of arrival in India, closer touch could be kept with travellers and further more Bombay presented certain distinct advantages from the point of view of printing facilities, etc.

The first three months were spent in organising and in working out schemes for the development of existing Publicity business and in formulating a programme for progress in new fields. Among some of the principal lines upon which it was decided to concentrate attention are —

- Cinema film production and display
- Poster production and display
- Pamphlet production and display
- Publication of an *Indian State Railways Magazine*,
- Demonstration Trains
- Upper and Lower class special excursion trains,
- Press propaganda in India
- Press propaganda in Europe America and other parts of the world
- Reciprocal publicity with the leading rail ways of the world

One of the most important of these activities is undoubtedly the cinema film production and display as much of this is directed towards encouraging primary industries and the welfare of agriculturists and villagers. It must be remembered in this connection that owing to the very large proportion of illiterates in India the cinema is the outstanding method of conveying information to the masses. Each State Railway is provided with a travelling cinema projection outfit which moves continuously from place to place over the different systems and by this means the propaganda films issued from the Central Publicity Bureau are widely circulated. That these displays which are free are fully appreciated

is proved by the patronage accorded to them. The work in this branch of the Publicity work has so increased that it was found necessary to appoint two officers specially for the work and in order to improve the standard a specialist film officer was recruited from England on a three years contract at the end of 1929. It is proposed to train suitable Indians in this work.

The necessity for economy however due to the decrease in earnings on railways during 1930-31 has necessitated the carrying on of film production with one officer only from November 1930 and the temporary closing down of the running of cinema was on State Managed Railways from February 1931.

A large number of posters by leading artists has been prepared for display in India and in the principal countries of the world focussing attention on the attraction which India has to offer to travellers and tourists.

Following up these posters many attractive pamphlets have been written by first class journalists and are now available in the leading Information and Travel Bureaux in India, Europe, America and other countries.

The production of the *Indian State Railways Magazine* commenced in the month of October 1927, and from the outset proved extremely popular. This publication is intended to be partly a publicity medium and partly to encourage the railwaymen of India to take a wider outlook on railway and general affairs. It contains a variety of articles on travel, archaeology, shikhar, transportation, welfare, fiction and natural history.

Upper and third class conducted tours and bazar specials have been run by several of the railways with considerable success and the extension of these is contemplated in the near future.

Shortly after the inauguration of the Central Publicity Bureau, the need was felt for a representative in England to give information and advice to potential travellers and to handle enquiries arising out of the advertising campaign which it was decided to carry out. A Publicity Officer was appointed and temporary offices secured in London in which an Indian State Railways Bureau was opened. It was soon found that separate permanent offices were required and these have now been obtained in 67 Haymarket, London, where sufficient accommodation is available to deal adequately with the many visitors who come there. With the opening of India House a Branch Office has also been provided there and this will deal more particularly with enquiries concerning Goods rates but general enquiries can also be answered there. In order to obtain an adequate share of the American tourist traffic, an Office has also been opened in New York and a Resident Manager appointed there. This office was at first temporarily in accommodation kindly provided by the Canadian Pacific Railway in their General Offices at 342, Madison Avenue, New York but now has its own commodious office in an excellent site at Delhi House, 38 East 57th Street, New York.

An intensive Advertising campaign in England and America every year is part of the normal

programme as it is realised that tourists bring money into the country and benefit not only the railways, but also hotel keepers, transport agencies, manufacturers of Indian silks, silver ware, curio dealers etc. and many other persons who cater for the tourist. During 1930 owing to decreased earnings and political conditions in India the advertising campaign was very considerably reduced. The decrease in the number of tourists to India during 1930-31 is one of the many ways in which India has suffered from the civil disobedience campaign organised by the Congress.

Capital Expenditure—The outlay during the year 1928-29 was Rs. 27.53 crores of which Rs. 25.41 crores represented expenditure incurred on State-owned lines.

Considerable progress has been made with the programme of new construction. Close on 1,300 miles of new railway were opened for traffic during 1928-29 and at the close of the year there were some 2,100 miles under construction.

Trade Review—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade.

Exports—The total value of exports recorded was Rs. 311 crores which means a decline of 6 per cent on the corresponding figure for 1928-29. The outstanding feature was a decline in the exports of jute raw and manufactured. Shipments of raw jute declined from 898,000 tons (Rs. 32.35 crores) to 807,000 tons (Rs. 27.17 crores). Exports of jute manufactures also went down in value from Rs. 56.90 crores to Rs. 51.93 crores the quantity however showing an increase of 46,000 tons over 1928-29. Although the cotton crop of the year was 9 per cent below the previous crop shipments of raw cotton sprang up from 683,000 tons to 727,000 tons under the stimulus of lower prices the value of the exports falling from Rs. 65.25 crores to Rs. 65.08 crores. Exports of cotton manufactures also declined by Rs. 61 lakhs. Piecegoods exported during the year amounted to 153 million yards valued at Rs. 4.67 crores, a decline of 16 million yards in quantity and of Rs. 70 lakhs in value in comparison with the figures for 1928-29. Shipments of oils and seeds also declined from 1,928,000 tons (Rs. 29.68 crores) to 1,190,000 tons (Rs. 26.47 crores). The principal item responsible for the decline under this head was groundnuts, exports of which decreased from 788,400 tons to 714,200 tons owing to a reduction of 25 per cent in the yield of the year's harvest. Instead however, recorded an increase of 91,400 tons. Exports of grains, pulses and flour showed a gain of 210,000 tons owing mainly to an improvement in the trade in rice exports of which recovered from 1.8 million tons valued at Rs. 26.47 crores to 2.3 million tons valued at Rs. 31.51 crores. Shipments of wheat further receded during the year from 116,000 tons to 13,000 tons notwithstanding an increase of 9 per cent in the crop output of 1928-29 over that of 1927-28. Exports of iron were also on the lower side having been returned at 668,900 cwt (Rs. 6.97 crores) against 743,400 cwt (Rs. 8.64 crores) recorded in 1928-29.

Imports—The total value of imports of foreign merchandise during 1929-30 amounted to Rs 241 crores a decrease of 5 per cent on the figure for 1928-29. The chief decrease of the year were recorded under yarns and textile fabrics (Rs 6 crores) metals and manufactures thereof (Rs 3½ crores) and grain pulse and flour (Rs 5½ crores).

2 The gross revenue receipts of State owned railways decreased from Rs. 104.34 crores in 1928-29 to Rs 102.70 crores in 1929-30, while the net receipts were less by nearly Rs 3

crores, being Rs 24.524 crores against Rs.37.518 crores in the previous year.

3 The number of passengers carried on all railways increased by about 14 millions, the average distance each passenger travelled also increasing from 85.6 miles in 1928-29 to 86.3 miles in 1929-30. The earnings from passenger traffic accordingly showed an increase of approximately one per cent or about Rs. 34 lakhs. Goods traffic however showed a decrease of about 3½ million tons while the earnings decreased by Rs. 2.33 crores chiefly under wheat, grain, pulse and other grains, rice, oil seeds and jute.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below—

Commodity	1928-29		1929-30		Increase + or Decrease in Earnings (lakhs)
	No of tons originating in millions	Rs in crores	No of tons originating in millions	Rs in crores	
(1) Fuel for public and Foreign Railways	20 10	10 10	21 46	10 22	+7
(2) Materials and Stores on Revenue account	15 47	3 17	17 94	3 12	-5

	86 99	60 12	85 96	66 68	-244

Open Mileage—The total route mileage on March 31st, 1930 was made up of—

Broad-gauge	20,508 81 miles
Metro-gauge	17 176 20 "
Narrow-gauge	4,038 72 "

Under the classification adopted for statistical purposes this mileage is divided between the three classes of railways as follows —

Class I	37,535 38
Class II	3,168 71
Class III	1 019 68

Class I includes all the 5-6" gauge mileage, 14,869 miles or 87 per cent. of the metro gauge, and 2 158 or 53 per cent of the narrow gauge.

The State owned 31,218 miles or about 75 per cent and directly managed 18,689 miles or about 45 per cent of the total mileage open at the end of the year

During the year 1929-30 812 miles of new lines were opened for public traffic. Of this mileage 797 miles belong to Class I and 15 miles to Class II Railways.

Additions to Equipment—During 1929-30 a considerable number of old carriages were replaced during the year by new carriages of larger seating capacity with the result that

there was an increase in third class accommodation of 51 813 on the broad gauge and 3 571 in the metro gauge making a total increase of 54 884. There was a decrease in goods wagons of 888 on the broad-gauge but an increase of 1,119 on the metro-gauge.

The following table shows total figures of seating accommodation under the four classes —

Class I Railways	Number of seats in passenger carriages.			
	1st	2nd	Inter	Third
5-6"	23,312	38,130	65,697	676,872
3-3½"	10,498	13,961	11,682	368,237

Financial Results of Working—The total gross earnings of all railways in India during the year 1929-30 amounted to Rs 116 08 crores as compared with 118 87 crores in 1928-29. These figures, however include railways owned by Indian States and companies for which the Government of India has no direct financial responsibility. The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows —

	(Omitting 000)
	1929-30
	Rs.
Traffic receipts from Government Railways	1 02,63 33
Interest on Depreciation and Reserve Fund balances, etc.	88,03
Surplus profits from Subsidized Companies railways	35,60
Total	1 03,86,96
	Rs
Working expenses including depreciation	63,29,20
Surplus profits paid to Companies	1 07,14
Interest on Government debt	25,93,00
Land and subsidy to Companies	5,32
Miscellaneous	48,12
Contribution at 1% on Capital charge—Commercial Lines	6 02,33
Net gain	97 93,66
Contribution at 1% on Capital charge—Surplus	5,91 31
Contribution of one-fifth of Surplus	1 18,26
Total contribution from Railway Revenues	7,80,59
Deduct loss on strategic lines	1,68,78
Net payment due from Railway to General Revenues in 1929-30	6 11 86

Financial Results of Working.

729

After meeting all interest and annuity charges Government therefore received a net profit of 4 04 crores on the capital at charge of the State minus the net receipts that is the gross receipts minus the working expenses, have in recent years given the following returns —

	Per cent
1913-14	5 01
1923-24	5 24
1924-25	5 85
1925-26	5 31
1926-27	4 96
1927-28	5 30
1928-29	5 22
1929-30	4 06

Up to-date figures of the results of working of other countries are not available, but the following table compares the latest available figures of average receipts per ton mile of those countries which have published statistics of working later than 1919 —

	Receipts * per ton mile Pia
United States of America 1929	5 70
United Kingdom 1929	15 15
Japan 1927-28	7 20
Switzerland 1928	20 20

United States of America	
France	
English Railways	
South African Railways	
Argentine Railways	
Canadian Railways	

India

	Receipts * per ton mile Pia.
South Australia 1928-29	17 25
Canadian Railways 1929	5 75
India 1929-30	6 14

In the case of receipts per passenger mile the figures for United States of America and India are as follows —

United States of America 1929	14 78 pias
India 1929-30	3 28 "

while in England the present standard fare charged per mile third class is 18 pias.

From the above it will be seen that railway transportation of freight in India is one of the cheapest in the world and still more so for passenger traffic.

An examination of the latest available figures of operating ratios of foreign countries brings out results not unfavourable to Indian Railways.

Year	Operating Ratio %
1930	74 per cent
1929	84 15 "
1928	79 40 "
1928-29	77 80 "
1927	71 05 "
1926	81 21 "
1913-14	51 79 "
1925-26	62 89 "
1926-27	62 04 "
1927-28	61 30 "
1928-29	62 77 "
1929-30	65 02 "

Value of Railway Materials Purchased — The value of stores purchased by the principal Indian Railways in 1929-30 shows an increase from Rs 20 83 crores to Rs 30 06 crores. The principal increase was under Rolling Stock (Rs 366 lakhs). The value of indigenous material shows an increase from Rs 12 91 crores in 1928-29 to Rs 13 83 crores in 1929-30.

	Value of imported materials			Value of indigenous materials	Total purchases 1929-30	Total purchases 1928-29
	Purchased direct	Purchased through Agents in India	Total imported materials			
	Rs crores.	Rs crores	Rs crores.	Rs crores	Rs crores	Rs crores.
Rolling Stock	6 05	1 23	7 28	1 63	8 91	5 25
Tools and stores	0 55	3 52	4 07	3 07	7 14	6 33
Permanent-way	1 47	0 19	0 66	4 89	5 55	7 00
Electric plant	1 22	0 00	2 12	0 04	2 16	3 64
Buildings and station materials and fencing	0 11	0 20	0 40	0 17	0 57	0 72
Bridge work	0 28	0 10	0 44	0 09	0 53	0 06
Workshop machinery	0 40	0 26	0 66	0 05	0 66	0 71
Engineer's plant	0 28	0 16	0 39	3 89	4 40	0 39
Other materials†		0 21	0 21			4 43
Total	9 51	6 92	16 23	13 83	30 06	29 69

* Converted at 4 875 = £ 1 and at Re 1 = 15 62

† Other materials consist of coal and coke, stone, bricks, lime and ballast etc.

Output of Railway owned Collieries—The output of railway owned collieries during 1929-30 was 5,184,206 tons out of a total of 4,773,559 tons consumed on state I. Railways.

Number of Staff—The total number of employees on Indian Railways at the end of the

year 1929-30 was 819,058 as compared with 808,433 at the end of 1928-29. The increase in route mileage during the same period was 812 miles. The following table shows the number of employees by communities on 31st March 1929 and 1930—

	Europeans	Statutory Indians				Grand Total
		Hindus	Muham- madans	Anglo- Indians	Other (Classes)	
31st March 1929	4 998	576 843	178,440	14 459	33 088	808,433
31st March 1930	4 975	580 282	182,847	14 692	36,762	819,058

Indianisation—The various Railway Companies managing State and other Railway lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the extension of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as practicable up to 75 per cent of the total number of vacancies in the Superior Services of the Railway concerned.

Schemes of recruitment—The Secretary of State's approval to the schemes of recruitment and training of superior officers of the State Railways in the main branches of service—(1) Civil Engineering (2) Transportation (3) Commercial and (4) Mechanical Engineering—were received and the Regulations for the recruitment of these services issued under Railway Department Resolution No 2508-E of 10th July 1926. The Regulations were revised in form and republished during 1927-28. Regulations for the recruitment and training in India of Officers for the Electrical Engineering and Signal Engineering Departments were incorporated in the Regulations for the Mechanical Engineering and Transportation (Power) Departments.

The Board have under preparation a scheme for the recruitment and training in India of Officers for the State Railway Coal Department and also regulations for the recruitment in India of Medical Officers for State Managed Railways.

During 1929-30 there were 41 permanent appointments made in the gazetted ranks on State Managed railways of which 12 went to Europeans and 29 to Indians of whom 19 were Hindus 4 Muslims 3 Anglo-Indians and 3 of other communities. Since 1925 the Indian element in the gazetted ranks has increased from 28.02 per cent on State-managed and 17.74 per cent on Company managed railways to 37.01 per cent on State-managed and 29.87 per cent on Company managed railways in 1930.

Public interest in the question has been maintained during the year, finding voice in the press and by interpellations in the Legislature. Considerable progress has been made with the scheme for the training of junior railway officers and of the senior subordinate staff on Indian railways. In this connection a Transportation

School was opened at Chandauli on March 2nd, 1925 as a temporary measure, as suitable buildings were available which could be adapted at small cost. Micro Officers courses were held and the school also acted as an Arms school for the L. I. Railway.

The foundation upon which the training scheme of Indian State Railways has been based is the Area School whose functions are—

- The training of probationers who have not yet commenced their railway service and
- The provision of periodical refresher courses for those already in the railway service certificates being granted on the results of each course.

Training will be provided for probationers in three groups—

- The Station Group, comprising telegraph signallers Assistant Station Masters and Station Masters
- The Commercial Group comprising Coaching and Goods Clerks
- The Train Staff Group comprising Guards

The courses will vary from 3 to 10 months depending on the group. The second function of the Area Schools the provision of refresher courses is intended to provide course of training for the staff at intervals of 5 years certificates being granted at the completion of the courses. It is hoped in time to ensure that no railway servant will be considered eligible for promotion to a higher post unless he holds the corresponding school certificate. The men selected for training as probationers are chosen on some railways by committees of officers on the various divisions and a central committee under the Personnel Officer at headquarters.

Above this comes the central school to carry out the same functions for Officers. The site selected for this central school, the **Railway Staff College**, was Dehra Dun, and the College opened for its first course in January 1930. Other services like the Army, the Navy and the Air Force have their Staff colleges but Indian Railways can claim the credit for being the first to open a staff college at which Junior and Senior Officers will undergo courses of instruction in Transportation and Commercial subjects and probationer officers will receive theoretical

training sandwiched in with practical work on railways. The College is situated in an estate of some 155 acres near the Forest Research Institute at Dehra Dun. The surroundings are well wooded and picturesque. The College building itself has a handsome facade 360 ft long, and is surrounded by a clock tower 90 ft high. The main feature in the building is the Transportation Hall which is 120 ft long by 49 ft wide and has a height of 45 ft from the floor to its arched roof. All around the floor runs a bench carrying a model railway of 2½" gauge used for demonstration purposes. This is worked electrically and has 13 stations with 19 cabs fully equipped with signals and block instruments. There are sections of double and single track and in the West half of the room the lines converge into a terminal station worked by a 50 k.v. cabin. Around the hall runs a gallery with alcoves sufficiently wide to house book cases and museum exhibits. Next in size to the Transportation Hall but none the less important on that account is the Locomotive Model Room. It contains a full sized wagon showing the working of the Vacuum Brake, a full sized train lighting set, a model footplate showing the driver's controls, trolleys fitted with automatic couplers, models illustrating superheating, steam distribution and lubrication and many other items of equipment too numerous to catalogue.

The rest of the building contains the College graph Demonstration Rooms, examination and lecture rooms, a library and meeting rooms, rooms for the instructional staff, the principals and clerks' Offices and last but by no means

least a useful little workshop where are being undertaken not only the repairs to College equipment, but also model work for State Railways Area Schools.

Behind the College building are the hostels arranged in four buildings. Each of these contains 16 units, each unit consisting of a bed sitting room and a bathroom provided with modern sanitary fittings. These four buildings are connected by pillared cloisters with a central building, which contains six mess rooms for the various communities, kitchens, two reading rooms, two billiard rooms, and a lounge.

Nor is outside recreation to be forgotten. A large area has been levelled to form a playing field, on the west side of which a pavilion is being erected. There are, in addition, six tennis courts, and, at an early date it is intended to lay out a golf course.

The Area School for the North Western Railway was temporarily opened at Lyallpur but it has now moved into permanent quarters near Lahore. A temporary training school for the G. I. Railway has been established at Bina pending the provision of a permanent school at Dhond and the scheme for forming a similar school at Gomoh for the E. I. and E. B. Railways is under consideration.

Fatalities and Injuries.—During 1929-30 there was an increase of 7 in the number of persons killed and an increase of 867 in the number of persons injured as compared with the figures of 1928-29. The number of passengers killed however shows a decrease of 60 and the number of passengers injured a decrease of 242.

The following table shows the numbers killed and injured separately under passengers, railway servants and others for 1929-30 as compared with 1928-29:—

	Killed		Injured	
	1928-29	1929-30	1928-29	1929-30
A Passengers—				
(1) Accidents to trains, rolling stock, permanent-way, etc.	24	6	207	69
(2) Accidents caused by the movement of vehicles used exclusively on railways	390	349	1,191	1,040
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	4	3	80	17
B Servants—				
(1) Accidents to trains, rolling stock, permanent-way, etc.	21	33	192	174
(2) Accidents caused by the movement of vehicles used exclusively on railways	341	343	1,492	1,706
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	49	62	3,180	4,014
C Others—				
(1) Accidents to trains, rolling-stock, permanent-way, etc.	55	67	94	171
(2) Accidents caused by the movement of vehicles used exclusively on railways	2,448	2,481	775	774
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	26	21	86	87
Total	3,368	3,365	7,187	8,054

Of the total number of 336 persons killed 2,010 were trespassers on the line and 375 committed suicide

Local Advisory Committees.—In the Annual Reports by the Railway Board on the working of Indian Railways references are made each year to the work that is being done by Local Advisory Committees on railways in bringing to the notice of their respective railways administrations matters affecting the general public in their capacity as users of the railway. These committees have been established and are functioning on all Class I Railways except His Exalted Highness the Nizam's State Railways and the Jodhpur Railway. During 1929-30 the Baral Light Railway constituted an Advisory Committee for that line.

These committees constitute a valuable link between railways and their clientele. The interest taken in their work and the value attached to their influence have been reflected in the requests received from trade associations and other organisations for representation on the committees. It has not always been possible to accede to these requests as it is felt that the usefulness of the committees is likely to be impaired if their constitution becomes unwieldy. A demand for the publication of a summary showing the work done by these committees found expression particularly during the debate on the Railway Budget in February 1928 and was repeated on a similar occasion in February 1929. To meet this demand a pamphlet showing in tabulated form the subjects discussed, the recommendations of the committees accepted by the railway administration concerned with or without modifications and the recommendations which for various reasons could not be accepted in connection with meetings held during the half year ending September 1929 was published and copies distributed to members of the Imperial Legislature before the Railway Budget debate in February 1930. Since then similar pamphlets for succeeding quarters have been published and copies made available for sale at the Government of India Central Publication Branch Calcutta.

The number of meetings of these committees held at each centre during the year was 122 as follows:—

Assam Bengal Railway	2
Baral Light Railway	1
Bengal Nagpur Railway—	
Calcutta (Bengal)	9
Patna (Bihar and Orissa)	3
Nagpur (Central Provinces)	3
Bengal and North Western Railway—	
Gorakhpur (United Provinces)	3
Muzaffarpur (Bihar and Orissa)	4
Bombay Baroda and Central India Railway	10
Burma Railways	11

Eastern Bengal Railway	8
East Indian Railway—	
Calcutta (Bengal)	10
Cawnpore and Lucknow alternatively (United Provinces)	6
Great Indian Peninsula Railway—	
Bombay	10
Nagpur (Central Provinces)	4
Cawnpore (United Provinces)	3
Madras and Southern Mahratta Railway—	
Madras	5
Mumbai (Deccan and Southern Mahratta)	8
North Western Railway—	
Lahore (Punjab)	12
Karachi (Sind)	4
Rohilkhand and Kumaon Railway	2
South Indian Railway	4

A perusal of the index of the pamphlets referred to above which are now being published quarterly indicates the wide variety of subjects dealt with by Local Advisory Committees, some of which may be specially mentioned supplementing the list given in the reports for previous years:—

Advertising railway facilities in the vernacular press
Prevention of the beggar nuisance at stations
Opening of book stalls
Detention of traffic on level crossings
Accommodation for trunk passengers
Facilities for unloading goods traffic
Provision of train indicators
Arrangements for the Kumbh Mela in January 1930
Fighting road bridges over bridges and wading halls
Arrangements for weighing of passenger-luggage
Improvement in over bridges
Opening of out-stations
Display of porters' tariffs
Provision of warning bells in Indian refreshment rooms
Retiring rooms at stations
Provision of servants' compartments in upper class stock
Changes in names of stations
Stoppage of fast trains at small stations
Issue of platform tickets
Improvement in design of coaching stock
Shortage of wagons
Provision of special coaches for vendors of fruit and vegetables

THE CHIEF RAILWAYS IN INDIA

The Assam Bengal Railway, which is constructed on the metre gauge, starts from Chittagong and runs through Burma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company

Mileage open	1,270
Capital at charge	Rs 25,03,93,000
Net earnings	Rs. 79,59,000
Earnings per cent	3.18

Bengal and North Western.

The Bengal and North-Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tichut State Railway. In 1880 this line was leased by Government to the Bengal and North Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatiba and the East Indian Railway at Benares and Mokameh Ghāt.

Mileage open	3,077
Capital at charge	Rs 20,91,97,000
Net earnings	Rs 2,05,46,000
Earnings per cent	9.52

Bengal Nagpur

The Bengal Nagpur Railway was commenced as a metre gauge from Nagpur to Chhatia garh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad gauge and extended it to Howrah Cuttack and Kāni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal fields and for a connection with the Branch of the East Indian Railway at Barilharpur.

Mileage open	3,256
Capital at charge	Rs. 74,61,70,000
Net earnings	Rs. 1,50,10,000
Earnings per cent.	2.01

Bombay Baroda

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905 and then renewed under revised conditions. In 1885 the Rajputana Malwa metre gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda Mutia, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Mileage open	3,898
Capital at charge	Rs. 76,82,54,000
Net earnings	Rs. 4,88,32,000
Earnings per cent	6.34

Burma Railways

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919 Sir Arthur Anderson said:—During 1914 15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1898 to a Company under a guarantee. From January 1st 1920, its working has been taken over by the State.

Mileage open	2,046
Capital at charge	Rs 34,75,53,000
Net earnings	Rs. 1,80,39,000
Earnings per cent	5.18

Eastern Bengal

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre gauge of the Northern Bengal State Railway which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Mileage open	1,895
Capital at charge	Rs 51,08,51,000
Net earnings	Rs. 2,13,94,000
Earnings per cent	4.19

East Indian

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Ranganj. It gives the only direct access to the port of Calcutta from North India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholders by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st 1925, when the State took over the management. From July 1st, 1925 the Oudh & Rohilkhand railway was amalgamated with it.

Mileage open	4,290
Capital at charge	Rs. 1,44,38,04,000
Net earnings	Rs. 7,32,86,000
Earnings per cent	5.08

Great Indian Peninsula

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent, and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Ratnagur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 184 miles on the Bhor Ghat and 91 miles on the Thul Ghat which rise 1,131 and 975 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th 1925 when the State took over the management.

Mileage open	3,701
Capital at charge	Rs. 1,10,02,62,000
Net earnings	Rs. 4,43,78,000
Earnings per cent.	3.78

Madras and Southern Mahratta Railway

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south westerly direction to Calcutta. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

Mileage open	3,329
Capital at charge	Rs. 61,19,43,000
Net earnings	Rs. 4,42,60,000
Earnings per cent.	7.28

The North-Western

The North-Western State Railway began its existence at the Sind-Punjab Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Larachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1873

72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind Punjab Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North Western State Railway. It is the longest railway in India under one administration.

Mileage open	6,827
Capital at charge	Rs. 1,50,16,77,000
Net earnings	Rs. 4,18,66,000
Earnings per cent	2.79

Oudh and Rohilkhand

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges a third rail was laid between Bhurwal and Cawnpore. The company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from its July 1925.

The South Indian

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line, but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India south of the south west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	2,347
Capital at charge	Rs. 40,41,63,000
Net earnings	Rs. 2,70,36,000
Earnings per cent	6.69

The Indian States.

The principal Indian State Railways are the Nizam's constructed by a company under a guarantee from the Hyderabad State the Kathiawar system of railways, constructed by subscriptions among the several Chiefs in Kathiawar the Jodhpur and Bikaner Railways constructed by the Jodhpur and Bikaner Chiefs, the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla and Kashmir Chiefs, and the railways in Mysore, constructed by the Mysore State.

PROGRAMME OF FUTURE CONSTRUCTION

At the end of the financial year 1929-30 a total of 1257·07 miles of new lines was under construction, distributed as follows —

	Miles
5' 6" gauge	730 77
3' 4" gauge	457 51
2' 6" gauge	60 29

During 1929-30 sanction was accorded to the construction of new lines totalling 237·77 miles

	Miles
5' 6" gauge	93 00
3' 4" gauge	115 17
2' 6" gauge	19 00

Lanes under Construction

Of the total of 1257½ miles of lines of various gauges under construction at the end of the year a brief account of some of the more important is given below. Owing to lack of funds however much of the work has had to be held in abeyance or slowed down.

Raipur Vizianagram Railway

This trunk line on the 5' 6" gauge 261 miles in length passes through a large undeveloped area and will provide direct communication between the Central Provinces and the new Harbour now under construction at Vizianagram on the east coast. The section of the line from Vizianagram to Parvatipuram 48 miles long was completed and opened to traffic in 1924 and another section of 62 miles from Raipur end in November 1929.

Work at the northern and southern ends is progressing well but on the middle portion sickness and delay in obtaining possession of land have impeded progress. The line will be opened by sections as they are ready, but it is not expected that the whole line will be opened throughout till 1938.

The following lengths were opened during 1929-30 —

	Miles
Parvatipuram Jemadepeta	19 75
Raipur Jhok	4 47
Jhok Harishankar	2 51

Good progress was made on the Vizianagram Harbour construction during the year. The suction dredger Vizianagram worked in the turning basin and at the entrance of the channel into the turning basin. The dredging of the whole of this area was completed to a depth of 30 feet below low water and that of a portion in the middle of the turning basin to a depth of 40 feet below low water. The dipper dredger was employed in dredging hard material and breaking rock in the entrance channel. The

Mudlark and 3 shore cranes dredged along the quay wall. The drag line excavator started work on the 7th November 1929 and the total amount of excavation was satisfactory. The quay wall for the three berths has been completed. Transit sheds Nos II and III are in hand. The dry dock was completed by the end of the year. All subordinate quarters have been completed. The railway lines behind the transit shed have been laid and are in use.

In connection with the anti-malarial work the usual protective measures were taken in hand. These works were inspected on the 4th December 1929 by the delegates of the League of Nations on tour in India who expressed their satisfaction with the manner in which they are being carried out.

A revised development plan of the harbour has been approved by the Government of India and the work on the scheme is being vigorously pushed on. It is expected that the harbour will be ready to berth ships by the end of 1932.

Lucknow-Sultanpur Jaunpur (E I Railway)

The question of constructing a railway between Jaunpur and Lucknow via Sultanpur has been long under consideration. The object of the scheme is to open out the country along the Goomti river between the Oudh and Rohilkhand main and loop lines. The railway will run more or less along the watershed between the Goomti and Sai Rivers and will cross a well cultivated fertile tract of country. The construction of the line which is about 142 miles long on the 5' 6" gauge was sanctioned in August 1927 and was expected to be ready by October 1931, but owing to the necessity for decreased capital expenditure the allotment for 1931-32 will only enable this line to be opened up to Sultanpur.

Kartal Kamaon (G I P Railway)

The construction of this broad-gauge branch on the Great Indian Peninsula Railway 59 miles long, was sanctioned in February 1928. It is intended to serve a fertile and well irrigated area in the Banda District of the United Provinces, and will open out the Ken Baghain Doab commanded by the Ken Canal. Construction has been temporarily deferred.

Lyallpur Chananwala (V W Ry)

The construction of the Lyallpur-Chananwala Railway on the 5' 6" gauge, was sanctioned in February 1928, and with the Chak Jhumra-Khushab line will provide a cross connection from Kundian to Chananwala which will probably be extended to Bhatinda. The line which is about 110 miles in length, will connect up the important towns of Sarogdha, Chilot, Lyallpur, Samandri, Tandlianwala, Okara, Dyalpur and Fazilka. Work however, has been temporarily suspended.

Batala-Bas (N W Railway)

The construction of this railway about 42 miles in length was sanctioned in January 1928. It will form a loop connecting Batala on the Amritsar Pathankot branch with Butari on the Amritsar-Jullundur section of the main line of the North Western Railway.

Besides touching three important places of pilgrimage it will traverse one of the most fertile tracts in the Punjab. The Batala Qadian section of twelve miles has been opened but the remainder of the work is being held in abeyance.

Decca Archa Railway

The construction of the Decca Archa Railway 41 miles long has been under consideration for some time as it will form an important link. The submission of the detailed is awaiting the result of an investigation by the Bengal Government in connection with waterways and flooding of the area in which this railway will run.

Tangla Belauri Rangapara Railway

The construction by the Eastern Bengal Railway administration of a metre gauge line 24 miles in length from Tangla via Belauri to Rangapara was sanctioned during the year under review. The line will serve the country lying between the Brahmaputra River and the outer ranges of the Himalayas the full development of which has been retarded for want of railway communication. At present communications in this area are so poor that during the monsoon great difficulty is experienced in maintaining a proper food supply for the population. The line will provide an outlet for the produce from the large areas of Government reserved forests and from a number of tea gardens. The country is also suitable for the production of sugar cane and rice. It is anticipated that the construction of the railway will give the necessary impetus for the rapid development of the areas thrown open to settlement by immigrants from the overpopulated areas around Dacca and Mymensingh.

Fort Abbas Rohatwak Hotwala Section of the Bahawalpur (Pothohar) Railway

Sanction to the construction of this line on the North Western Railway was accorded at an estimated cost of Rs 45,09,909 in December 1924. The length of the line is 88.26 miles and the gauge 5' 6". It is expected to be opened for public traffic in March 1931. This line is in continuation of the existing Bahawalpur Fort Abbas Railway. When finally completed it will run to Khanpur with a chord from Rohatwak to Hotwala. The project will be financed by the Bahawalpur Durbar from the Sukki Valley Project Loan Fund. The line is being constructed and will be worked by the North Western Railway. It passes through land which at present is a desert but which is to be irrigated by the perennial canal of the Sukki Valley Project. It has no special features being similar to other lines in the plains of the Punjab.

Bilari to Jaitara

The construction of this branch a length of 15.38 miles on the 3-3 gauge was sanctioned in November 1929 at an estimated cost of Rs 2,98,491. The line lies entirely in Jodhpur territory and its object is the development of grass farms of the State Military Department in the vicinity of Jaitara. The line is also intended to serve local purposes and to facilitate the administrative work of the State.

The line has been financed, is being constructed and will be worked by the Jodhpur Durbar as part of the Jodhpur Railway system. The Government of India have no financial interest in this Railway.

Piplod Dewgad Barin Railway to Tambora

The construction of this extension of the Piplod Dewgad Barin Railway was sanctioned at an estimated cost of Rs 1,26,880 in November 1929. This line which is an extension of the feeder to the main line of the Bombay Baroda and Central India Railway lies entirely in the Baria State territory and its object is the development of State forests. The line is financed and is being constructed by the Baria Durbar and after construction the Durbar is prepared to hand it over for working to the Bombay Baroda and Central India Railway Company which manages the existing line from Piplod to Dewgad Barin provided that the Railway Company are agreeable to work it on reasonable terms. The Government of India have no financial interest in the Railway.

Talala-Visavadar Dharu Railway

The construction of this branch in two sections, viz., Talala Visavadar and Visavadar Dharu a total length of 47.27 miles on the 3' 3 1/2" gauge was sanctioned in October 1929 at an estimated cost of Rs 97,93,500. The line traverses Baroda territory and Ughlis and Jecpur taluqa, the section from Talala to Visavadar lying entirely in Junagadh State. The entire line has been financed and is being constructed by the Junagadh Durbar and the Government of India have no financial interest in it.

Salem-Vridhachalam (S I Railway)

This railway is the outcome of several proposals some dating as far back as 1909, for lines to serve the Salem and South Arcot districts. The line which is to be on the metre gauge, will be about 83 miles long and together with the Vridhachalam Cuddalore Railway now under construction will form a cross feeder connecting Salem Junction on the broad-gauge with Cuddalore on the metre-gauge. It will also pass through fairly populous country and busy trade centres and will afford facilities for the general development of trade besides developing the well irrigated country to be traversed. It is expected to be ready about June 1931.

Minbu-Pakokku (Burma Railways)

The construction of this important metre gauge line about 312 miles in length, as part of the Burma Railways system, was sanctioned in

December 1927. It involves a wagon ferry over the Irrawaddy river connecting Patanago and Malun. The line is designed to open out a large area at present lacking in means of transportation. No work is, however, in progress at present.

Bridge over the Irrawaddy at Sanganj

The construction of a bridge over the Irrawaddy at Sanganj has been sanctioned at an estimated cost of Rs. 188 lakhs. Considerable progress with the approaches and ordering the steelwork etc. has been made during 1930.

Electrification of the Madras Suburban Section, South Indian Railways

A scheme for the electrification of the suburban lines of the South Indian Railway from Madras Beach to Tamburam was sanctioned during the year 1927-1928 at an estimated cost of Rs. 42 lakhs approximately. It is anticipated that the introduction of electric traction on this section will not only enable the railway administration to cope with the normal increase in traffic, but will also considerably encourage the development of suburban passenger traffic in the area.

Madras Hydro-Electric Schemes

Similarly further investigations had also to be made of the Madras Hydro-Electric projects and of the schemes for the electrification of the Madras-Trichinopoly and certain other sections of the South Indian Railway for which it is intended to obtain power from hydro-electric sources. The results of these further investigations are understood to show that the electrification of the Nilgiri Railway can only be justified at present but this question is still under consideration.

Electrification of Suburban Lines near Calcutta

With regard to the Calcutta suburban electrification schemes it was found necessary in view of the heavy expenditure involved to carry out

further investigations both as to the probable development of traffic in the suburban area and the estimated cost of the project, in order to ascertain to what extent the introduction of electric traction on the section would be justified financially.

Terminal Facilities for Passenger Traffic of the Bombay, Baroda and Central India Railway at Bombay

The Railway Board with the approval of the Secretary of State for India have sanctioned the construction of the Bombay Baroda and Central India Railway terminal station at Bellairs Road, Bombay for dealing with the long distance passenger traffic at an estimated cost of Rs. 152 lakhs (1930). Bombay Central as the new station is called was opened for traffic on December 18th 1930 by H. L. The Governor of Bombay. Calcutta Station was closed from January 1931 and will be dismantled.

Calcutta Chord Railway

This line starts from a point near Dankher station on the Bardwan Howrah Chord of the East Indian Railway and joins the Eastern Bengal Railway near Dutt Dam Junction.

It is about 8 miles in length and includes a bridge over the Hooghly river at Bally. This connection is primarily intended for export of coal from the East Indian Railway. But it is likely in the near future to be used also for coal from the Jengal Nagpur Railway Coalfields and with the developments anticipated in the terminal arrangements at Calcutta and the electrification of the lower portion of the Eastern Bengal Railway a large proportion of the Suburban passenger traffic will eventually pass over it.

Work on the bridge over the Hooghly made satisfactory progress during 1929-1930. Practically all well sinking and construction of piers and abutments were completed by March 31 1930 and the fabrication and erection of girders has progressed rapidly during 1930.

INDIA AND CEYLON

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time and since 1935 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait the possibility of connecting these two terminations by a railway constructed on a solid embankment raised on the sand bank known as 'Adam's Bridge' to supersede the ferry service which has been established between these two points is one of the schemes that has been investigated.

In 1913 a detailed survey was made by the South Indian Railway Company and the project contemplated the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various islands and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete tie struts and chains. Behind the pile slabs of reinforced concrete will be slipped into position the bottom slabs being sunk well into the sand of the sea bottom. Lastly the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jacks. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo Burma Connection

The raids of the Khanden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards M. Inst. C.E. to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and head-quarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo Burma frontier, 94 miles from the town of Chittagong. For about 180 miles further it chiefly runs through the fertile rice lands of Arakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 200 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaulkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab when there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. B. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,600 feet. There are less than fifty miles of very heavy work and only about 4,500 feet aggregate rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

(a) Excludes value of antimonial lead

(b) Export f.o.b. values

(c) Export values

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out in all but remote localities the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, copperas, copper lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The

high quality of the native-made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until less than forty years ago the chemical manufacturer of Europe found among his by products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

Coal

Most of the coal raised in India comes from Singareni in Hyderabad and in Central Provinces but there are a number of smaller coal fields. Outside Bengal and Bihar and Orissa the most important mines are those at another

Provincial production of Coal during the years 1928 and 1929

(a) Estimated

The export statistics for coal during 1929 show a large increase of over 100,000 tons following an increase in the previous year of some 40,000 tons. The total exports of coal and coke rising from 826,713 tons to 276,610 tons, 2,281 tons of the latter being coke. The increase in exports is due chiefly to Hongkong which absorbed some 180,000 tons. As before the major portion of the exports went to Ceylon which took nearly 1,000 tons more than during the previous year. Exports to the Straits Settlements (including Malacca) showed a slight increase. On the other hand the Philippine Islands and Guam took a considerably smaller quantity than in 1928. Other countries absorbed nearly 12,000 tons more.

Imports of coal and coke increased from 310,186 tons in 1928 to 218,393 tons in 1929, 14,631 tons of the latter consisted of coke. This increase is due to a rise of some 5,000 tons in the imports from South Africa balanced partly by a decrease of some 4,000 tons from each of the United Kingdom and Australia and of some 31,000 tons from Portuguese East Africa. The total imports are now less than half those of the pre-war quinquennium and the depression in the Indian coal industry which continued till nearly the end of 1928 can no longer be looked upon as attributable to the competitive effect of foreign imported coal. The average surplus of exports over imports during the years 1926 to 1929 was 1,000 tons, less than the surplus during the pre-war quinquennium.

Labour in the Coal Mining Industry

The average number of persons employed in the coalfields during 1929 showed a very slight decrease in spite of the substantial increase in production. The average output per person employed therefore again showed an advance on the previous years, the figure of 110 tons for 1929, rising to 111.1 tons for 1928, 122.8 tons for 1927, 120.6 tons for 1926 and 130.4 tons for 1925. The figure for the year 1929 is higher than any previously recorded and is due partly to an increased use of mechanical coal cutters and partly to concentration of work. During the past few years a large number of collieries have been shut down and the labour absorbed in the remainder, this concentration permits of a proportional reduction in the supervising staff resulting in a larger tonnage per head. There was a decrease (6) in the number of deaths by accident, these amounted to 2.12 which is an improvement on the annual average for the quinquennium 1929-1923 which was 2.74 and in line to the annual average for the quinquennium 1924-1928 which was 2.18. In addition it relates to a production which is over 3 million tons in excess of the average for 1928-1923 and nearly 1½ million tons in excess of the average for 1924-1928. The death rate was 1.2 per thousand and persons employed in 1929 against 1.3 for 1928, the average figure for the period 1919-1923 was 1.36, and for the period 1924-1928 was 1.16.

IRON ORE

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds on difficulty in obtaining sufficient supplies of ore from deposit that no European ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig iron and steel were recorded in 1830 in the South Arcot Districts. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the Barakar Iron Works was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal bearing Barakar and Raniganj stages stretches east and west from the works and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last-named district has largely replaced the supplies of ore hitherto obtained near the iron works. The Bengal Iron and Steel Company, Limited have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Koilhan Estate, Singh

bhum. Some years ago the Bengal Iron Steel Co., Ltd. secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buri and Buda Buri respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron ore, the extension of which has been traced into Keonjhar and Bonai States in Orissa, a total distance of some 40 miles in a S. & W. direction. At Panstra Buri, a portion of Notu Buri, the deposit has been opened up, and now feeds the Barakar ironworks. Panstra Buri rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite jaspers. The ore itself is high grade micaceous hematite, often lateritized at the outcrop. Cross-cut into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritization, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore bodies in the Balpur District, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly

lenticular leads or bodies of hematite, with small proportions of magnetite in close association with granite on the one hand and granitic rocks on the other.

The production of iron ore in India is still steadily on the increase. India is now in fact the second largest producer in the British Empire, and yields a place only to the United Kingdom. Her output is of course still dwarfed by the production in the United States (over 80 million tons) and France (over 40 million tons), but reserves of ore are however not much less than three quarters of the estimated total in the United States, and there is every hope that India will in the early future take a much more important place among the world's producers of iron ore. In 1929 there was an increase in the Indian output

over the previous year of 18.1 per cent amounting to 722,097 tons. The figures shown against the Koonchar and Masuribhanj States in the following statistical table represent the production by the United Steel Corporation of Asia Ltd. and the Tata Iron & Steel Co. Ltd. respectively. Of the total production of 1,390,235 tons shown against Singhbhum 461,500 tons were produced by the Tata Iron & Steel Co. Ltd. from their Noamundi mine, 327,477 tons by the Lungal lion Co. Ltd. from their Lohuri Ajai and Madella mines, and 486,602 tons by the Indian Iron & Steel Co. Ltd. from their mines at Una. The remaining 31,637 tons were produced by another firm. The output of iron ore in Burma is by the Burma Corporation Limited and is used as a flux in steel-smelting.

Quantity and value of Iron-ore produced in India during the years 1928 and 1929

In contrast to 1928 there was in 1929 a rise in the output of iron and steel by the Tata Iron & Steel Co. at Jamshedpur. The production of pig iron and steel (including steel rails) rose respectively from 510,894 tons and 289,805 tons in 1928 to 722,097 tons and 410,423 tons in 1929 and of iron-ore from 3,283 tons in 1928 to 6,640 tons in 1929. The production of pig iron by the Lungal lion Co. rose from 198,112 tons in 1928 to 196,080 tons in 1929, their output of products made from their pig iron in 1929 amounted to 11,151 tons of sleepers and chairs and 12,445 tons of pipes and other castings against 20,282 tons and 27,180 tons, respectively in 1928. The Indian Iron & Steel Co. increased their production of pig iron from 397,784 tons in 1928 to 451,060 tons in 1929. The output of pig iron by the Mysore Iron Works rose from 1,104 tons in 1928 to 21,432 tons in 1929. The total production of pig iron in India in 1929 was 1,391,541 tons against 1,01,844 tons in 1928.

The total number of underground furnaces that were at work in the Central Provinces during the year 1929 for the purpose of smelting iron-ore was 174 against 166 in the previous year, 95 furnaces were operating in the Bilaspur

district 53 in Mandla 11 in Deogarh 12 in Jaspur 3 in Raigarh and none in Jabalpur.

With the increase in the production of pig iron in India recorded above, the quantity exported rose from 428,621 tons in 1928 to 548,581 tons in 1929. In 1929 all the principal consumers of Indian pig iron over 70 per cent of the total exports having gone to that country in 1929. There was a fall in the export value per ton of pig iron from Rs. 47 0 (£3 51) in 1928 to Rs. 35 7 (£3 41).

The Steel Industry (Protection) Act 1924—Act No. XIV of 1924—authorised, to companies employing Indian bounties which were granted upon rails and shipplates wholly manufactured in British India from material wholly or mainly produced from Indian iron-ore and competing with specifications approved by the Railway Board and upon iron or steel railway wagons a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and consequently the payment of bounties ceased on the 31st March 1927 but the industry is protected to a certain extent by varying tariffs on different classes of imported steel.

Exports of Pig Iron from India during the years 1928 and 1929

	1928			1929

Depression in the industry—In 1929 the output rose slightly to 994 279 tons but the value fell heavily to 41,571 1 0 0. In 1924 first-grade ore cost £ 1 1 10 in the United Kingdom ports fetched an average price of 23 9d per unit. In 1925 this price fell to 21 5d in 1926 to 18 4d in 1927 to 18 1d in 1928 to 17 0d with a heavy fall in 1929 to an average price of 14 0d per unit. This is only 1d above the post-war lower governing price of manganese with an index figure of cost of supplies and services of 1 45. This continued fall in the price of manganese ore from 1924 to 1929 is to be correlated with the fact that from 1924 to 1927 the rate of increase of the world's production of manganese ore was much greater than the rate of increase in the world's production of pig iron and steel. The fact that the world's production of pig iron and steel in 1929 exceeded the production of 1928 whilst the production of manganese ore was probably less has not arrested the fall in view of the fact that the available supplies of manganese ore are now much in excess of requirements. Russia by non economic methods of exploitation and finance is able to place large quantities of ore on the market at a price below the critical figure of 13 0 pence referred to above. The large deposits of high grade

manganese ore discovered near Postmasburg in South Africa are also being developed, and on the completion of the railway line now under construction it may be anticipated that South Africa will secure a substantial portion of the world's market. It is not surprising therefore that in spite of the apparent prosperity of the Indian manganese industry in 1929 as judged from figures of production and export yet at the time of writing (August 1930) the industry as a whole is in a state of relative depression and many operators have ceased work.

The present chief sources of production of manganese ore are now India, Russia, the Gold Coast and Brazil whilst substantial supplies of ore are forthcoming from Egypt and Czechoslovakia.

There is a steady consumption of manganese ore at the works of the three principal Indian iron and steel companies not only for use in the steel furnaces of the Tata Iron and Steel Company and for the manufacture of ferro-manganese but also for addition to the blast furnace charge in the manufacture of pig iron. The consumption of manganese ore by the Indian iron and steel industry in the year under review amounted to 47 435 tons against 69,872 tons in 1929.

MANGANESE ORE

This industry commenced some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the

total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

Record Output in 1927—Before the year 1928 the record production of manganese in India took place in the year 1907 when 902 291 tons were raised. In 1926 the output rose to 1 014 828 tons valued at £2,590,357, f.o.b. Indian ports the rise in output was, however, accompanied by a decrease in value. In 1927 the production rose to the highest yet recorded figure of 1 129 353 tons, accompanied by a rise in value to the peak figure of £2 844,237, f.o.b. Indian ports. During the year 1928, the upward tendency of manganese was not maintained, the output falling to 978,449 tons, valued at £2,321,201, f.o.b. Indian ports.

GOLD

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1906 when 616,768 ounces were raised. In 1906 the quantity won was 565,203 ounces and this figure fell to 335,065 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Rntti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910 the amount being 2,332 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the

North Arcot district of Madras from 1893 till 1900, the highest yield (2,554 ounces) being obtained in the year 1898. The Kyankpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitthaia and 216 ounces of gold were obtained in 1904, the amount steadily increased from year to year and reached 2,146 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java, and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy valley. Yenangyang is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and to 1886, prior to the annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyang field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Since now holds the second place among the oil fields of India. Petroleum was struck at the end of 1901, and in 1908 5 million gallons were obtained. In 1907 and 1908 the production of this field was 48 million gallons, and after a fall to 31½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coast are known to contain oil deposits, but their value is uncertain. About 30,000 gallons were obtained from the eastern Barungo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpada district during 1911. Oil was struck at Mizba in 1910, the production for that year being 18,220 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makma in 1887. Nothing more,

however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered attempts to develop them have not hitherto been successful.

Output in 1928.—The world's production of petroleum in 1928 amounted to a little over 151½ million tons, of which India contributed 0.79 per cent. In 1927 the world's production jumped to some 171 million gallons, of which the Indian proportion on a practically stationary production fell to 0.72 per cent.

In 1928 there was another substantial rise in the world's production which reached the figure of over 181 million metric tons. In 1929 there was another jump to nearly 203 million metric tons. For this rise the United States and Venezuela were mostly responsible, but Russia, the Dutch East Indies, Baku, Persia, Peru, Trinidad, Canada, Columbia, Ecuador, Argentina, Persia, and smaller producers all contributed to the increase. There was a decline in the case of Mexico and India. The United States contributed 67 per cent of the world's supply in 1928 and Venezuela 9.7 per cent of the total world's production. In 1928 India contributed 0.79 per cent, which fell to 0.61 per cent in 1929, her position on the list of petroleum producing countries fell from 11th in 1928 to 12th in 1929 her place being taken by Trinidad.

Although petroleum statistics prove that it is becoming more and more difficult to make than the output of India (including Burma) at the high levels it reached in 1919 and 1921 when peak production of well over 30½ million gallons were reached the production thereafter falling to 281 113 909 gallons in 1927, yet the production during 1928 reached the figure of 306 041 711 gallons and in 1929 the figure of 306 148 093 gallons which is the highest ever recorded. This slight increase in output in

1929 was accompanied by a substantial increase in value amounting to Rs 66 623 (£386 241). The increase in output recorded in 1928 and 1929 notable as it is can only be regarded as an arrest in the decline which has set in and which with possible interruptions is likely to continue slowly and steadily during the present generation and a new field of importance is discovered. The chances of the latter receding year after year as exhaustive geological research continues to prove fruitless.

Amber Graphite and Mica—Amber is found in very small quantities in Burma, the output for 1929 being 19 cwts valued at Rs 6 (60). Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. The total output in 1921 was 26 tons India has for many years been the leading producer of mica turning out more than half of the world's supply. In 1914 owing to the war, the output was only 38,189 cwts compared with 43,450 cwts in 1913. Owing to necessary restrictions with regard to the export of mica the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years.

There was a further increase in the declared production of mica from 45,112 cwts valued at Rs 24,10,400 (£170 887) in 1928 to 53,231 cwts valued at Rs 26,50,759 (£198 489) in 1929. This is the highest production yet recorded, with the exception of that of 1918 (54,710 cwts). The output figures are incomplete, and a more accurate idea of the size of the industry is to be obtained from the export figures. In the years 1928 and 1929 the quantity exported was more than double the reported production. In both the years 1926 and 1927 also the export figure was approximately double the reported production figure. The United States of America and the United Kingdom, which are the principal importers of Indian mica, absorbed 25.1 per cent and 44.6 per cent, respectively, of the total quantity exported during 1928 and 34.6 per cent and 41.7 per cent, respectively during 1929. Germany took 16.0 per cent and 8.8 per cent, respectively, of the total quantities exported during the years 1928 and 1929. The average value of the exported mica fell from Rs 98.0 (£7.3) per cwt in 1928 to Rs 90.5 (£6.7) per cwt in 1929. The exports for 1929 (116 075 cwts) are the highest yet recorded, the previous highest being 90,690 cwts in 1925. The value

(£784 092) was, however, exceeded by the value of the exports of 1929 (76 317 cwts valued at £1 065,438). 1925 (90 690 cwts valued at £799 488) and 1926 (89 947 cwts valued at £820 901).

The difference between exports and production is generally attributed to theft from the mines. If this be the only explanation one must assume that during the past three years there has been as much mica stolen as won by honest means. Early in 1928 a bill was introduced into the Legislative Council of Bihar and Orissa the purpose of which was an attempt to reduce the losses on this account by licensing miners and dealers the bill was however, rejected. In March 1930, however a similar bill to regulate the possession and transport of and trading in mica was passed.

Tin, Copper, Silver and Lead—The only persistent attempt to mine tin is in Burma. The output was for some time insignificant but rose in 1913 to 110 tons valued at £46 000 which fell to £38,000 in 1914. In 1925 Burma yielded 2 308 tons. Copper is found in Southern India in Rajputana and at various places along the outer Himalayas, but the ore is smelted for the metal alone no attempt being made to utilize the by products. In 1924 the production of 2 935 tons of copper matter, valued at Rs 15 94 527 was reported by the Burma Corporation, Ltd. in the Northern Shan States.

Works at the Mossaboni Mine of the Indian Copper Corporation Ltd. in the Singhbhum District, was practically suspended during the year 1926 pending the raising of the capital required for the erection of the necessary concentrating smelting, refinery and power plants. Early in 1927 the Anglo-Oriental and General Investment Trust, Ltd., London assumed control, a sum of £350 000 was subscribed and the erection of the new plant commenced at once at the company's new site at Moubhandar Ghatsila together with an assisted siding from the Bengal Nagpur Railway main line at Ghatsila, and an aerial ropeway from the mine

Operations commenced on a revenue basis on January 1st 1929, and 1929 marks therefore the first full year's production. 75,830 short tons of ore were hoisted from the mine and 75,174 short tons treated in the mill and smelter with the production of 1,635 long tons of refined copper ingots and slabs. The copper was sold entirely in India at an average price of Rs 1,200 per long ton. The surface and underground ore reserves now total 788,154 short tons of 33 per cent ore representing a content of 26,546 short tons of copper. The amount of ore produced by the company in 1929 was 75,831 tons valued at Rs 14,58,746 (£108,862).

A considerable increase in the production of tin ore in Burma has to be reported for during which the output amounted to 3,784 tons valued at Rs 99,740 (£447,567) against 2,780 tons valued at Rs 45,41,201 (£338,895), in the preceding year. This increase of 1,004 tons is somewhat fictitious, as the figures for 1928 did not include 218 tons of low grade recovered from the mine dumps of Yawadi complex wolfram scheelite cassiterite ore in the Southern Shan States and purchased from tributors for £4,018. No milling operations

were performed, and the percentage composition of the mixed ore was therefore not precisely known. The figure for 1929 includes 371 tons from Mawchi calculated to be the proportion of tin-ore in 6.15 tons of concentrates derived from mixed wolfram-scheelite cassiterite-ore. These concentrates were assumed to contain 43 per cent of wolfram and 57 per cent of cassiterite. There is no reported output of block tin.

The production of lead ore at the Bawdwin mines of Burma increased slightly from 445,503 tons in 1928 to 449,972 tons in 1929, and the total amount of metal extracted increased from 78,384 tons of lead (including 1,241 tons of antimonial lead) valued at Rs 2,22,05,128 (£1,657,099) to 80,233 tons of lead (including 1,200 tons of antimonial lead) valued at Rs 2,40,63,112 (£1,845,717) in 1929. The quantity of silver extracted from the Bawdwin ore fell from 7,404,728 ozs valued at Rs 1,19,26,055 (£800,004) in 1928 to 7,260,517 ozs valued at Rs 1,07,31,482 (£800,037) in 1929. The value of lead per ton rose from Rs 283.3 (£21.1) in 1928 to Rs 311.6 (£23.2) in 1929 but the value of silver fell from Rs 1,910 (28.8sd) per oz in 1928 to Rs 1,77 (26.4sd) per oz in 1929.

Zinc—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India and no production was recorded until 1913. In 1914 the production was 8,558 tons and although the output fell to 96 tons in 1915, there is a prospect of India becoming an important producer of zinc ore in the future. Important silver-lead zinc deposits occur at Bawdwin in Tawngpying State one of the Northern Shan States in Upper Burma. The mines are connected with the Mandalay Lashio Branch of the Burma railways by a narrow gauge line 51 miles long, the lines meeting at Manaywe, which is about 644 miles from Rangoon. They were worked for many centuries by the Chinese for silver, and have long been known to contain zinc ore until recently however no serious attempt appears to have been made to market the ore for its zinc.

Gem Stones—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, agate, cornelian, jadeite and amber. The production of diamonds in

Central India rose in 1929 from 828 8 carats valued at Rs 65,491 (£4,887) in 1928 to 1 627 5 carats valued at Rs 52 045 (£4,884). Of this latter production 1 475 7 carats were produced in Panna state and the remainder in Charkhari, Ajaigarh and Bijawar. Amber has already been referred to, of the rest only the ruby, sapphire and jadeite attain any considerable value in production and the export of the latter has declined, owing to the disturbance in China which is the chief purchaser of Burmese, jadeite. The output of the ruby mines in 1924 was only 101 097 carats or less than half the average annual quantity produced during the two preceding quinquennial periods. In 1922 an exceptionally valuable ruby of nearly 23 carats was found of rare size and quality. A severe decline in the output from the Mogu ruby mines of Upper Burma in 1924, followed in 1925 by a marked drop in value, bore witness to a serious decline in the industry. The Burma Ruby Mines, Limited ultimately decided to go into liquidation and the mines were offered for sale in September 1926. The total production in 1928 was valued at Rs 1,77,012 and in 1929 at Rs 1 81 780.

SALT

There was a substantial increase in 1929 in the total output of salt amounting to 193,752 tons, the three chief contributors to the increase being Aden, Bombay and Sind and Northern India (146,130 tons). There was a small increase from Burma. Madras showed a decrease of 27 340 tons.

Quantity and value of Salt produced in India during the years 1928 and 1929

Production of Burma in 1922. Monographs on Mineral Resources published by the Imperial Institute. Quinquennial Review of the Mineral Production of India for the years 1924-1928 (Records of the Geological Survey of India Vol LXIV)

Stock Exchanges.

There are about 446 Share and Stock Brokers in Bombay. They carry on business on the Brokers' Hall bought in 1899 from the funds of the Share and Stock Brokers' Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to fix the rates in times of emergencies. The official address of the Secretary is Dalal Street, Fort Bombay.

At first the admittance fee for a broker was Rs 5 which was gradually raised to Rs 7,000. The fee for the Broker's card has increased and it was recently sold by public auction for Rs 21,800. In 1921 a number of cards were sold at Rs 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. This building was pulled down and the extension was completed last year. The present value of the card is about Rs 7,000. The rules of the Association were revised in October 1918 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller. There are two classes of Exchange Brokers: Europeans and Indians; the latter being certified for recognition by the native Stock Exchange. Business in Government Paper and all other Trustees' Authorised Securities is carried on under the rules of the Bombay Stock Exchange but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street, known as the Bombay Stock Exchange, Ltd. This separate Exchange no longer functions as the older body; it was revived in 1922. It has ceased to function again.

Committee of Enquiry.—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, government, customs, practices, rules, regulations and methods of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform, notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on the part of the public. The Association, however, adopted the minority report which leaves the constitution and practice of the Exchange very little modified.

In the middle of the year 1925 there was heavy speculation in certain mill scrips. The market

was tremendously oversold, the usual crisis ensued leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reform arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end, they submitted a draft rules under which wild speculation will be discouraged and the recurrence of such crisis as that indicated above will be unlikely.

For many years the Calcutta Share Market had its meeting place in various gullies in the business quarter and was under no control except that of established market custom. In 1908 the Calcutta Stock Exchange Association was formed; a building was leased in New China Bazaar Street now called Royal Exchange Place; a representative committee was formed and the existing trade customs were focussed into rules drawn up for the conduct of business. Admittance as a member of the Stock Exchange is by vote of the committee and the entrance fee is at present Rs 500. The market custom differs very materially from that of most other Stock Exchanges since there are no settlement days, delivery is due the second day after the contract is passed and sales of securities are effected for the most part under blank transfers. Another difference in procedure as compared with the London Stock Exchange is that there are no Jobbers in the Calcutta market. The dealers who take their place more or less are not compelled to quote a buyer's and a seller's rate and are themselves Brokers as well as dealers calling upon the Banks and other clients and competing with Brokers.

There are about 150 members, besides outside brokers, the former consisting of European Jewish Marwari and Bengalee firms. The Marwaris predominate. The volume of *bona fide* investment business is comparatively small and insufficient for the number of Brokers. The principal business transacted on the Calcutta Stock Exchange is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, Mineral and various industrial concerns (such as Paper, Flour, Sugar), Railway and Transit Companies and Debentures. The latter comprising those of industrial concerns and Trustees' Investment Securities, namely Municipal and Port Trust Debentures. The association has an honorary secretary and is not at present affiliated to the Bengal Chamber of Commerce.

The Madras Stock Exchange situated at No. 9 Broadway consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares. Business is regulated by rules drawn up by the Directors. There is a Board of arbitration. There is an admittance membership card of Rs 1,000 and an annual subscription of Rs 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs 3,000.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian, but alongside these have sprung up in recent years certain Associations such as the Bombay Indian Merchants Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realising the increasing attention demanded by the economic development of India, took steps to form an 'East India Section' of their organization. The Indian Chambers work harmoniously with this body but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organisation. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr (now the Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to

take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress —

I The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III The objects for which the Chamber is established are —

- (1) To discuss and consider questions concerning and affecting trade, commerce, manufactures and the shipping interests at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.
- (2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.
- (3) To organise Chambers of Commerce, Commercial Associations or Bodies in different trade centres of the Country.
- (4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber.

The Articles of Association provided 'There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February' or at some other time, and semi-annual or special meetings may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary.

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta. The initiative in the new activities hailing, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927 decided upon the formation of a Federation of Indian Chambers of Commerce and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following —

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.

- (b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business
- (c) To enter into any arrangement with any Government or authority supreme, municipal local or otherwise that may seem conducive to the Federation objects or any of them, and to obtain from any such Government or authority all rights, concessions and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation
- (e) To take or otherwise acquire and hold shares in any other company having

objects altogether or in part similar to those of this Federation

- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise

- (g) To draw, make, accept discount execute and issue bills of exchange, promissory notes bills of lading warrants debentures and other negotiable or transferable instruments or securities

The Rules provide for two classes of members viz numbers consisting of Chambers of Commerce (Subscription Rs 300) and others consisting of Commercial Associations (Subscription Rs 150)

The following were elected a provisional Committee of the Federation —

President—Sir Dinshaw M. Petit

Members—Messrs. G. D. Hiria Sir Purshotamdas Thakurdas, Vidyasaagar Pandya, Jamal Mahomed Lala Harikishan Lal, Adamji Haji Dawood, Jamshed N. R. Mehta, Vikramjit Singh Shri Ram W. G. Bannerjee, B. F. Madon, Kasturibhai Lalbhai D. P. Khaitan and Rai Bahadur A. C. Bannerjee, the last two being appointed Treasurers

BENGAL.

The Bengal Chamber of Commerce was founded in 1884. Its headquarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange, the Bengal Bonded Warehouse Association, the Calcutta Trades Association the Bengal National Chamber of Commerce and the Marwari Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade in particular in Calcutta. There are two classes of members Permanent (Chamber and Associated) and Honorary

Merchants bankers shipowners representatives of commercial railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture and joint stock companies or other corporations formed for any purpose or object connected with commerce, agriculture mining or manufacture and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber

President—Mr. B. B. Laird, M.L.C. (Messrs. Thomas Duff & Co. Ltd.)

Vice President—Mr. J. A. Tassie (Messrs. James Finlay & Co., Ltd.)

Committee—The Hon. Mr. P. H. Browne, C.B.E. (Messrs. Mackinnon, Mackenzie & Co.), Mr. Geo. Cook (The National Bank of India Ltd.), Mr. F. E. Cunningham (Messrs. Turner Morrison & Co. Ltd.), Mr. L. V. Heathcote (The Burmah Shell Oil Storage and Distributing Co. of India Ltd.), Mr. R. Pearce (The Eastern Bengal Railway), Mr. G. de M. Kellock (Messrs. Gillanders Arbuthnot & Co.), Mr. R. A. Towler (Messrs. McLeod & Co.)

The Secretary of the Chamber is Mr. D. K. Cunnison Assistant Secretary, Mr. A. C. Danfel

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned for the current year are —

Council of State—The Hon. Mr. P. H. Browne, C.B.E.

Bengal Legislative Council—Mr. G. B. Dain (The Calcutta Tramways Co., Ltd.) Mr. H. H. Burn (Messrs. McLeod & Co.) Mr. E. B. Laird (Messrs. Thos. Duff & Co., Ltd.) Mr. C. R. Sumner (Messrs. Kilburn & Co.) Mr. W. H. Thompson (Bengal Telephone Corporation, Ltd.) Mr. R. Smith (The Burmah Shell Oil Storage and Distributing Co. of India, Ltd.)

Calcutta Port Commission—The Hon. Mr. P. H. Browne, C.B.E. (Messrs. Mackinnon Mackenzie & Co.) Mr. T. W. Dowling (Messrs. Turner Morrison & Co., Ltd.) Mr. C. de M. Kellock (Messrs. Gillanders, Arbuthnot & Co.) Mr. J. A. Tassie (Messrs. James Finlay & Co., Ltd.) Mr. A. Mohd. Eddis (Messrs. Gladstone, Wylie & Co.) Mr. A. L. D. Tucker (Messrs. Kilburn & Co.)

Calcutta Municipal Corporation—Mr. J. Campbell Forrester M.L.C. (Messrs. Smith Forrester & Co.) Mr. Geo. Morgan, C.B.E. (Messrs. Morgan Walker & Co.) Mr. H. H. Hestling (Messrs. Stearns Ltd.) F. Rooney (The Bengal Telephone Co. Ltd.) Mr. N. R. Lake (Messrs. James Luke & Son) Mr. L. P. Mitchell (Messrs. Bird & Co.)

Bengal Boiler Commission—Messrs. John Williamson (Union Jute Mills South) H. H. Reynolds (Andrew Yule & Co.) and W. Gow (Jasraj & Co., Ltd.)

Board of Trustees of the Indian Museum — Mr I B Cunningham (Turner, Morrison & Co, Ltd)

Bengal Smoke Nuisance Commission — Messrs C A John Hendry (Burn & Co, Ltd) and J Williamson (Union Jute Coy & S. Mill)

Calcutta Improvement Trust — Mr Geo Morgan, C M A L A (Morgan, Walker & Co)

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce —

Calcutta Wheat and Seed Trade Association, Indian Jute Mills Association, Indian Tea Association Calcutta Tea Traders Association, Calcutta Fire Insurance Association Calcutta Import Trade Association, Calcutta Marine Insurance Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association Indian Engineering Association, Calcutta Jute Fabrics Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers Association, Baled Jute Shippers Association, Calcutta Jute Dealers' Association Calcutta Hides and Skins Shippers' Association Calcutta Sugar Importers' Association, Indian Lac Association for Research and Calcutta Accident Insurance Association and Salt Importers Association of Bengal

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and

adjustment of disputes and differences relating to trade business, manufactures, and to customs of trade, between parties all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burmah, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may, from time to time annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants

The Chamber also maintains a Licensed Measures Department controlled by a special committee. It includes a Superintendent (Mr B. Ellis), Deputy Superintendent (Mr A. H. Lugg), Head Office Manager (Mr O. G. Smith) and six Assistant Superintendents (Messrs J. G. Smyth, A. H. Mathews, G. O. G. Smyth and C. O. H. Bowden, J. B. F. Harefey and B. Perry, and the staff at the time of the last official returns consisted of 100 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measures Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current* and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned to aid and stimulate the development of trade commerce and industries in India with capital principally provided by or under the management of Indians to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India, to adjust controversies between members of this Chamber to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade commerce and industries in India to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a commercial exchange in Calcutta and to do all such other things as may be conducive to the development of trade, commerce and industries or incidental to attainment of the above objects or any of them

Mr Chandulal Jeypand Gurjar Paris.

Mr Anubala Bapalal Mehta Paris

Office Address 135 Canning Street, Calcutta

BOMBAY

The object and duties of the Bombay Chamber as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect the general mercantile interests of this Presidency, to collect and classify information on all matters of general commercial interest, to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body or mercantile interests in general, to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business, to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1834 under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 169 and the number of Associated members is 11. Of these numbers 19 represent banking institutions, 7 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 11 insurance companies, 16 engineers and contractors, 121 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 300 and the Associate member's subscription is Rs. 200 per annum. Gentlemen distinguished for public services, or eminent in commerce and manufactures, may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be

held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for specific purpose.

The Chamber elects representatives as follows to various public bodies —

The Council of State, one representative
Legislative Council of the Governor of Bombay, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Bombay Improvements Committee one member, elected for two years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

 The Hon ble Mr E Miller

Special Work

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows classified the number of packages of piece-goods and yarns imported by individual merchants.

The 'Weekly Return' issued by the Chamber shows clearances of a large number of important designations of merchandise.

A return of Current Quotations is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 16, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late. The certificates granted show the following details—

- (a) The date, hour and place of measurement,
- (b) the name of the shipper,
- (c) the name of the vessel,
- (d) the port of destination,
- (e) the number and description of packages
- (f) the marks
- (g) the measurement, and in the case of goods shipped by boats,
- (h) the registered number of the boat
- (i) the name of the tidal

Certificates of weight and of origin are also issued by the Chamber.

Associated Chamber of Commerce of India and Ceylon

HEAD OFFICE LOCATED IN CALCUTTA FOR 1930

Millowners Association, Bombay

The Millowners Association Bombay was established in 1875 and its objects are as follows—

- (a) To encourage friendly feeling and amity amongst Millowners and users of steam water and/or electric power on all subjects connected with their common good
- (b) To secure good relations between members of the Association
- (c) To promote and protect the trade, commerce and manufactures of India in general and of the cotton trade in particular
- (d) To consider questions connected with the trade, commerce and manufactures of its members
- (e) To collect and circulate statistics and to collect, classify and circulate information relating to the trade, commerce and manufactures of its members.

Any individual partnership or company owning one or more mill or mills or one or more press or presses or one or more spinning or other factory or factories actuated by steam, water, electric and/or other power is eligible for membership, members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs 50 paid by him as annual subscription.

Millowners Mutual Insurance Association, Ltd

The Millowners Mutual Insurance Association, Ltd, was registered on 30th June 1924 as a Company Limited by guarantee. The registered office of the Association is located in Temple Bar Building, Esplanade Road, Fort, Bombay.

The objects of the Association are —

- (a) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependents for injuries or accidents fatal or otherwise, arising out of and in the course

of their employment; (b) the insurance of members of the Company against loss or damage by or incidental to fire, lightning, etc., and (c) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counter insurances and counter-guarantees, etc., etc., etc.

The Association consisted of 61 members on 1st October, 1930

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non members are also eligible for membership of the Mutual provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors

The present Directors are —

A. Geddla, Esq., (*Chairman*), Sir Victor Sassoon Bart., Sir Ness Wadia, K.B.E., Sir Joseph Kay, Kt., The Hon.ble Sir Munmohandas Ramji, Kt., Ratansi D. Morarij, Esq., C. N. Wadia Esq., O.S., B. D. Saklatvala Esq., G. M. Roer, Esq. and B. K. Mantri Esq., B.A., Barrister-at Law, Secretary of the Association

Indian Merchants' Chamber.

The Indian Merchants Chamber was established in the year 1907. Its objects are —

- (a) To encourage friendly feeling and unanimity among business community on all subjects connected with the common good of Indian merchants
- (b) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly
- (c) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance
- (d) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber and to make efforts for the spread of commercial and economic knowledge
- (e) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies and in general to take the initiative to secure the welfare of the business community in all respects
- (f) To make representations to Local, Central or Imperial authorities, Executive or Legislative on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.

- (g) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable
- (h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes
- (i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other actions as may be conducive to the extension of trade, commerce or manufactures or incidental to the attainment of the above objects
- (j) To secure the interests and well-being of the Indian business communities abroad
- (k) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly

There are three classes of members —

- (1) Ordinary, (2) Patrons and (3) Honorary members —

(a) — Residents of Bombay and its suburbs who will have to pay Rs 75 as annual subscription, but joint stock Companies will have to pay Rs 100 per year

(b) — Motuall members who will have to pay Rs 35 as annual subscription

(c) — Associations which will have to pay Rs. 125 as annual subscription

Admission Fee — All the ordinary members and patrons pay Rs 100 as admission fee which is credited to a capital fund of the Chamber and not expended on revenue account except with the consent of the general body

- (2) Patrons — Indian firms or individual Indian merchants can join as Patrons. Firms will have to pay Rs 5,000 and individuals Rs 2,500 as donation, the proceeds of which will be credited to a capital fund which shall not be expended on revenue account but the interest whereof shall be taken to revenue account

- (3) Honorary members — Gentlemen distinguished for public services or eminent in commerce and manufactures or otherwise interested in the aims and objects of the Chamber may be elected as Honorary members by a General Meeting of the Chamber on the recommendation of the Committee and as such shall be exempted from paying subscriptions. They shall not be entitled to vote at any meeting of the Chamber nor shall they be eligible to serve on the Committee

Any Indian gentleman firm or association engaged in mercantile pursuits or interested in trade and commerce desirous of joining the Chamber shall be eligible for membership

The following bodies are connected directly and indirectly with the Chamber —

The Grain Merchants Association (which is a member)

MAHARASHTRA CHAMBER OF COMMERCE.

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory owners belonging to the City of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba,

Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and Indian States adjoining these districts.

President—Mr. Walchand Hirachand Doshi O.I.E. J.P.

Vice-Presidents—Messrs. B. B. Hanumantrao Ramnath and M. L. Dahanukar

Secretary—Mr. D. V. Kelkar M.A.

The offices of the Chamber are in the Phoenix Building, Graham Road, Ballard Estate, Bombay.

KARACHI

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon any gentlemen interested in the affairs and objects of the Chamber. All new members joining the Chamber pay Rs 7-0 entrance fee and the monthly subscription is Rs 18. The subscription to the Chamber's periodical returns is at present fixed at Rs 7-9-0 per month. The affairs of the Chamber are managed by a committee of ten members consisting of a Chairman, Vice-Chairman and eight members, elected at the annual general meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, four representatives on the Karachi Port Trust two on the Karachi Municipality and two on the North Western Railway Advisory Committee, Karachi. There were 77 members of the Chamber in December 1929. The following were the officers in 1930—

Chairman Mr R A Pearson Forbes, Forbes Campbell & Co Ltd

Vice Chairman Mr J R N Graham V C, Grahams Trading Co, Ltd

Members of Committee Mr C T Brereton, The North Western Railway Mr H G Cooper M O D C M Durmah Shell Oil Storage and Distributing Co of India, Ltd Mr A K G Hogg Mackinnon Mackenzie & Co Mr H Macfarlane Strauss & Co Ltd Mr F H Milligan Lloyd Bank Ltd, Mr G N R Morgan The Bombay Co Ltd Mr E S. Schwarz Volkart Brothers Mr W Statham, Stelmans Ltd

Representatives on the Bombay Legislative Council Mr J Humphrey OBE

Representatives on the Karachi Port Trust Messrs F A Pearson J R N Graham V C, A K G Hogg and L L Price CBE OBE

Representatives on the Karachi Municipality Mr C F Laborde and Mr E Sumner

Representatives on the North Western Railway Local Advisory Committee Karachi Messrs E A Pearson and R S Backhouse

Secretary and Public Measure Mr Alan Duguid, A.F.C.

The following are the principal ways in which the Chamber gives special assistance to members—The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or whom one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators under certain regulations. Similarly the Chamber under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure parcels, bales of cotton wool, hides and other merchandise arriving at or leaving the port.

MADRAS

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing per pro for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers of attorney as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership as by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscriptions shall not exceed Rs. 300 per annum payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is that no trademark or ticket shall be registered on behalf of an Indian firm trading under a European name.

The following publications are issued by the Chamber—Madras Price Current and Market Report, Fumage Schedule and Madras Landings, Charges and Harbour Dues Schedule.

There are 56 members and 6 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows—

Chairman Mr H. P. Pearson M.C.

Vice-Chairman Mr J. Birley

Committee Mr W. M. Browning Mr G. W.

Chambers Mr W. B. MacCallan, Mr J. W.

Mackintosh, Mr W. O. Wright

The following are Lodges to which the Chamber is entitled to elect representatives and the representatives elected for the year—

Madras Legislative Council Messrs H. F.

P. Pearson and F. Birley

Madras Port Trust Mr G. W. Chambers

R. D. Denniston, A. S. Fodd W. O. Wright

Corporation of Madras Mr E. E. James

M. O. Mr D. M. Reid, Mr A. Sinclair Rose

Federation of Chamber of Commerce of the

British Empire Sir Gordon Fraser

Secretary Mr W. Waddington

SOUTHERN INDIA

The Southern India Chamber of Commerce has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be —

To maintain a Library of books and publications of commercial interest so as to diffuse commercial information and knowledge amongst its members.

To establish Museums of commercial products or organise exhibitions either on behalf of the Chamber or in co operation with others.

There are two classes of members permanent and honorary. The usual conditions as to eligibility for election prevail.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1913. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body. Under the Madras City Municipal Act, 1910, the Chamber has the right of electing two Councillors to the Madras Corporation. Under the State Aid to Industries Act, 1923 the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Road Board, the Town Planning Trust, the Provincial Cotton Committee, Vizagapatam Harbour Works Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Government Institute of Commerce, Advisory Council, Madras the Social Hygiene Council (Madras Branch), the Anna Malai University, State Technical Scholarship Board, Government Body of the Training Ship, Dufferin, Advisory Committees of the Government Rajapouram and Ophthalmic Hospital and Madras Electric Supply and Tramway Advisory Committee, Income-tax Board and Referees and Indian Institute of Accountants.

The Chamber has 418 members on the roll and has its own building. Several Associations in the City of Madras and Chambers of Commerce Upcountry have been affiliated to this Chamber.

UPPER INDIA

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore Rs 800 a year, an individual member resident or carrying on business in Cawnpore Rs 240. Firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited, to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 69 members, one honorary member and six affiliated members.

The following are the officers:—
Upper India Chamber of Commerce Committee—*President*—Mr A. J. Carnegie (The British India Corporation, Ltd.) *Vice President*—Mr J. M. Iowrie (Messrs Begg, Sontherland & Co. Ltd.) *Members*—Mr T. Cawm Jones (Messrs D. Walbridge & Co. Ltd.) Mr B. Menzies OBE (The British India Corporation Ltd.) Mr W. R. Watt MA BSC DIC IC9 (The British India Corporation Ltd.) Mr K. J. D. Price (The Muir Mills Co. Ltd.) Mr R. Williamson (The New Victoria Mills Co. Ltd.) Mr P. J. W. Plummer (The Swadlow Cotton Mills Co. Ltd.) Mr L. C. Sandy (The East Indian Railway) Bala Ram Varan Sahai (Cawnpore) *Representatives on the United Provinces Legislative Council*—Mr J. M. Souter MLC (Messrs Ford & Macdonald Ltd.) Mr J. P. Srivastava MLC MLC Cawnpore

Secretary—Mr J. G. Ryan MBE FV
Head Clerk—Balraj B. N. Ghoshal

PUNJAB

The Punjab Chamber of Commerce has its headquarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab, the North West Frontier Province and Kashmir. The Chamber has branches at Amritsar and Lahore. Membership is by ballot and is restricted to Banks, Merchants (wholesale), Railways and proprietors of large industrial interests. The entrance fee is Rs 100 and the rate of subscription Rs 180 per year. The Chamber returns one member to a seat on the Reformed Punjab Legislative Council jointly with the Punjab Trades Association and shares representation in the Indian Legislative Assembly with other Chambers which are members of the Associated Chambers of Commerce of India and Ceylon, in the seat allotted to the Associated Chambers. The Chamber is a member of the Federation of Chambers of Commerce London. The Chamber is represented on the Municipal Corporation of Delhi as well as on the East Indian Railway Advisory Committee, Cawnpore, the Cotton Exports Duties Advisory Committee, Bombay, and the Auxiliary Forces Committee, Delhi & Lahore Military Areas.

The Managing Committee meets alternately

at Delhi and Lahore and the following are office bearers:—

Chairman—Mr P. Mukerjee (Messrs P. Mukerjee & Co. Ltd. Delhi) *Deputy Chairman*—Mr W. C. J. Gilbert (Shahdara Saharanpur Railway, Delhi) Mr E. J. Sherriff (Messrs R. V. Wood & Co. Delhi) Mr R. H. Markesier, (Burmah Shell Oil Storage and Distribution Co. of India Ltd. New Delhi) Mr W. Cole (The New Farnham Woolen Mills Co. Dharawal) Mr Khari Ram (The Delhi Cloth & General Mills Co. Ltd. Delhi) Mr A. C. Roy CIP (The Eastern News Agency Limited, Delhi) Jahan Saheb S. M. Abdullah (Messrs S. M. Hussain Pichai, Delhi) Mr D. G. W. Tisdale (Messrs Jird & Co. Lahore) Hon. Mr Rai Bahadur Lala Ram Saran Datta, C.F. (The Molaram Cotton Mills, Lahore) Mr Aftab Rai Bar-at-Law (The Ganga Ice Factory, Lahore) (ant.) Mr J. H. Chase (Chief Commercial Manager, North Western Railway, Lahore) Mr A. C. Mullen (The Amritsar Distillers Co. Ltd. Amritsar) Mr W. Robertson Taylor (The East India Carpet Co. Limited, Amritsar) Mr Tachibana Natsun, (Messrs I. D. Tachibana Natsun, Amritsar) and Mr Moti Ram Mehra (Messrs Moti Ram Mehra & Co. Amritsar)

Secretaries—Messrs A. F. Ferguson & Co., Chartered Accountants, Delhi

UNITED PROVINCES

The number of members on register is 126 (97 Local and 29 Mofussil). All the important commercial and industrial interest of the Provinces of Agra and Oudh are represented—

President—Mr W C De Noronha Proprietor of Messrs. M A De Noronha & Son Cawnpore

Vice-Presidents—Babu Sri Ram Khanna (Managing Director of Messrs. Ramchand Gurnahal Mal Cotton Mills Co Ltd Lucknow), Jala Ram Kumar Newatia of Messrs. Ram Kumar Rameshwari Das Cawnpore

Secretary—Rai Bahadur Babu Vikramajit Singh Advocate M L O, Director of British India Corporation Ltd, Cawnpore

Joint-Secretary—Babu Gur Prasad Kapoo of Messrs. Basti Ram Mata Din, Cawnpore

Members of the Committee—Jala Rameshwar Prasad Bagla, Rai Bahadur Lala Gopi Nath, Jala Dwarika Prasad Singh, Mr Hira Lal Khanna, Mr Chaman Lal Mishra, Mr Arshina Lal Gupta, Jala Nand Ram Mehrotra, Jala Pradip Lal Singhania, Babu Bhuri Lal, Mr T S Mahowati, Mr L Moti Lal, Ram Balaan Gupta, Mr J B Vardiana, J. Kalka Prasad, Rajul Ram, Mr L. K. Dhar Nath

Asst. Secretary—Mr B N Chopra

Advisory Committee constituted under the Auxiliary Force Act 1920—L. T. Morshead, Esq

COCANADA

The Cocanada Chamber of Commerce was established on 29th October 1868.

The following are the members of the Chamber which has its headquarters at Cocanada the chief port on the Comorand Coast north of Madras—

Members—The Comorand Co., Ltd. Ripley & Co. Innes & Co. Wilson & Co. Gordon Woodroffe & Co. (Madras) Ltd. J. H. Vyas & Co. Ltd. Burmah Shell Oil Storage and Distributing Co. of India Ltd. Northern Circars Development Co. (India) Edwards Ltd. The Agent Imperial Bank of India.

MEMBERS OF THE COMMITTEE

Mr S. A. Cheshman (Chairman)

C. D. T. Shoroor

G. M. Iaku

G. Gompertz (Secretary)

The rules of the Chamber provide that by the terms member be understood a mercantile firm or establishment or the permanent Agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other places in the Districts of Kistna, Godavari, Visagapatnam and Ganjam and duly elected according to the Rules of the Chamber and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee when called upon by disputing members or non members of the Chamber give their decision upon all questions of mercantile law and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 15 must accompany the reference with Rs. 5 from a non member and Rs. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members including the Chairman is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum payable quarterly and for each member whose place of business is elsewhere is Rs. 60 per annum payable in advance. Committee meetings are held on the 1st Tuesday in the month and general meetings on the 3rd Tuesday or when ordered.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

CEYLON

The Ceylon Chamber of Commerce was established on the 25th March 1880 and was incorporated in 1890, with its headquarters at Colombo. All firms and persons engaged in the general trade of Ceylon are admissible as members and every person or firm desirous of joining the Chamber must after having furnished one month's notice of their intention to apply for membership be proposed by one member, seconded by another and balloted for by the whole Chamber. The affairs of the Chamber are conducted by a Board of Directors consisting of Chairman and Vice Chairman and 10 members.

The following is the membership of the Board at the present time:

Hon. Mr. M. J. Carey (Chairman) Mr. J. A. J. J. (Vice Chairman) Mr. W. H. J. J. Mr. C. R. Brown Mr. M. D. J. J. Mr. L. W. J. J. Mr. R. M. J. J. Mr. A. J. J. J. Mr. A. J. J. J. Mr. F. J. J. J. Mr. W. J. J. J. J.

Secretary—Mr. C. J. Whitaker

Representative on the Legislative Council—Hon. Mr. M. J. Carey

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1 Council House Street, Calcutta, the headquarters of the Director General. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of all India statistics. Among the important publications for which the Director General is responsible are the following annual volumes: Review of the Trade of India, Statement of the Foreign Sea-borne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs tariff. The department also publishes a weekly journal—The Indian

Trade Journal—the principal features of which are (a) information as to tariff changes in foreign countries which affect Indian interests (b) notices of tenders called for and contracts placed by Government departments and public bodies, (c) crop reports and forecasts (d) Government orders, communications and other notifications affecting trade, (e) analysis of Indian trade statistics (f) market reports prices and trade movements of the staple exports and imports, (g) trade enquiries for securing trade introductions, (h) summaries of the leading features of consular and other trade reports and (i) abstracts of the proceedings of the various Chambers of Commerce in India.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library need for the purpose of answering enquiries, but in

1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first class technical library containing over 11,000 volumes as well as Indian and foreign statistical publications and over 400 technical and commercial journals and market reports. Ordinarily books are consulted in the Library but they are

also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India with the Indian Trade Commissioner in London, with His Majesty's Trade Commissioners in India and the Dominions and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA

The British Trade Commissioners in India are part of the world wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade in London which is the headquarters of this organisation is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the over seas trade of the United Kingdom by securing commercial information from all parts of the world, in disseminating it to British manufacturers and exporters by undertaking such special constructive activities as may be found possible and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. These overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and in the Consular Service.

Mr T. M. Ambrose, C.B.E. was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in March of that year. For five years owing to the pressing need for economy in the Public Service he was singlehanded in covering this vast territory. In 1923 however H.M. Government sanctioned the opening of an office in Bombay and the creation of an additional Trade Commissioner's post in Calcutta. Mr W. D. M. Clark holds the appointment of H.M. Trade Commissioner at Bombay and in 1930 Mr R. B. Whitton was appointed as H.M. Senior Trade Commissioner at Calcutta. The territory is now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader politico-economic problems which are becoming so important in view of the changing political conditions in India.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants both in the United Kingdom and other parts of the British Empire. It is therefore a careful study to which and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade industries and commerce of his area. His general functions are to maintain cordial relations with the governmental authorities of his area, to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers to visit the principal commercial centres to report upon foreign competition in financial and trade conditions and new legislation affecting trade to make an annual general report in the conditions and prospects of trade in his area and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area and to give all possible assistance to the representatives of British firms who may visit his territory.

Fervent efforts are made by His Majesty's Trade Commissioners to keep in touch with British representatives and Agents in India. These offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world etc. A library consisting of over 1,000 catalogues of the leading British manufacturers and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from

the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in voicing their difficulties and in meeting foreign competition. As a rule these complaints eulogized the Consuls of other countries and invited the attention of Government to their many virtues. In response to this agitation the greatest care has been taken by the British Government to select as their trade officers Overseas, men of sound commercial training and experience who have acquired some reputation in their respective spheres and a comprehensive and businesslike organization has been built up at the Department of Overseas Trade, London, to deal with the information sent home. It now rests with the British mercantile community, both at home and also Overseas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars with regard to foreign competing goods, conditions of trade etc., as they are able to afford.

THE INDIAN CENTRAL COTTON COMMITTEE

The Indian Cotton Committee of 1917 is a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922 reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton growing industry generally to advise the Government of India and Local Governments in regard to matters of cotton policy especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921 and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows—

President—The Vice Chairman, Imperial Council of Agricultural Research (*ex-officio*), Sir F. Vijayaraghavachariar, K.C.S.I.

Expert Adviser to the Imperial Council of Agricultural Research in Agricultural Matters (*ex-officio*) Mr B C Burt, M.B.E.

Representatives of Agricultural Departments—Mr D G Munir, Dy. Director of Agriculture, Madras; Mr J I Vaidya, Dy. Director of Agriculture, Bombay; Mr P V Richards, Entomologist to Govt., United Provinces,

Mr D Milne, C.I.E. Director of Agriculture, Punjab; Mr F J Plymton, C.I.F. Director of Agriculture, Central Provinces; Mr T D Stock, J.A.S., Deputy Director of Agriculture, Burma.

The Director General of Commercial Intelligence and Statistics (*ex-officio*)—Dr D B Meek, O.B.E.

Representatives of Chambers of Commerce and Associations—Major W. Ellis Jones, Last India Cotton Association; Mr S D Saklatvala, (*Vice-President*) Bombay Millowners Association; Mr Joseph A. K. J. Bombay Chamber of Commerce; Sir Parshotamdas Thakurdas, Kt. C.I.F. M.B.E., Indian Merchants Chamber, Bombay; Mr D. M. Cillum, Karachi Chamber of Commerce; 40th Kasturba Lalbhai Ahmedabad Mill owners Association; Mr J. Vonesh, Tuticorin Chamber of Commerce; Mr J. Tinker, Upper India Chamber of Commerce; Lala Virajan Prasad, Karachi Indian Merchants Association; Mr W. Roberts, Empire Cotton Growing Corporation.

Representatives of Cotton Manufacturing or Cotton Ginning Industry dominated by Local Governments—Sir S. B. Mehta, Kt. C.I.F., Rao Bahadur K. J. Deshmukh, Central Province; Mr H. J. Moore, Madras; Rao Bahadur Lala Swak Ram, M.L.C., Punjab; Mr Girija Prasanna Chakravarty, Bengal.

Co-operative Banking Representative—Sardar Sampuran Singh.

Representatives of Cotton Growing Industry—Mr R. B. Appaswami, Naidu, Garu, M.B.E.; K. Sarabha Reddi, Garu, Madras; Rao Bahadur Bhimabai Ranchodji, Nalk, M.C.; Rao Sahab Chinnappa, Shidramappa, Shirsahatti, Bombay; Rao Bahadur Amba Prasad, M.L.C.; Rao Sahab Bikkara Bhatta, M.L.C., United Provinces; Major D. Vanden, Sardar, Ujjal.

Singh, M.L.O., Punjab Rao Bahadur M. G. Deshpande, Mr. M. P. Kothre, M.L.O., Central Provinces and Berar.

Representatives of Indian States—Mr. B. A. Collins C.I.E. I.O.S., Director General of Industry and Commerce Hyderabad State; Mr. V. N. Likhite, D.S.C., Director of Agriculture, Baroda State; Mr. H. B. Pasdy, Administrative Officer, Department of Agriculture, Gwalior State; Mr. A. Howard, O.F.S., Director, Institute of Plant Industry Indore and Agricultural Adviser to the States in Central India and Rajputana.

Additional Members Nominated by the Governor General-in-Council—Mr. C. E. Falsleet, representative of the Indore State; Mr. D. N. Mehta, Economic Botanist to Government, Central Provinces; Dr. L. C. Coleman, Director of Agriculture Mysore State; Mr. W. I. Jenkins, Chief Agricultural Officers Sind; Dr. W. Burns, D.S., Principal Agricultural College, Poona; B. Karna, Prasad, A.S., Economic Botanist to U. P. Government; Mr. C. K. Hilson, Director of Agriculture Madras.

Secretary—Mr. J. H. Ritchie M.A. B.Sc. I.A.S.

Deputy Secretary—Mr. P. H. Rima Rodd M.A., B.Sc. I.A.S.

Director, Technological Laboratory—Assistant Director Dr. Aziz Ahmad M.Sc. Ph.D.

Office—Vulcan House, Nicol Road, Ballard Estate, Bombay.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee, which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes were reducing the returns of the grower and causing great economic loss to the country at large.

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and of the Baroda Rajpala Chhota Udepur and Byderabad States and with excellent results.

More recently the Cotton Ginning and Pressing Factories Act, (XII of 1925) has been passed which provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved

varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up-country and primary cotton marketing. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of about 1 staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton trade and of the cotton growing industry thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research Studentships—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian Universities to undertake research on cotton problems under the direction of experienced research workers in India. Six to eight such studentships are awarded every year.

Statistics—By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to the raw cotton received and of raw cotton consumed in the spinning mills in the British provinces and in the States of Hyderabad Mysore Baroda Gwalior and Indore the establishment of statistical returns relating to the number of bales of raw cotton pressed weekly in every Province and many of the Indian States and the revival of the rail borne trade returns of cotton for trade blocks are some of the results already achieved by the Committee in this direction.

Research—By means of the Cotton Cess the Committee has provided with funds for the promotion of research. It maintains in Bombay a fully equipped technological laboratory which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants in aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number thirteen.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED

Bombay—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association Ltd, The Bombay Cotton Exchange, Ltd, The Bombay Millowners Association, The Bombay Cotton Brokers Association, Ltd, The Marwari Chamber of Commerce, The Bombay Cotton Merchants and Mucadams' Association Ltd, and The Japanese Cotton Shippers Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr G. Wiles. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922 when the Act under which the Board worked was repealed and its functions were carried on by the newly constituted East India Cotton Association under Bombay Act No. XIV of 1922. Since then the Association, subject to its By-laws being sanctioned by Government, has been regulating transactions in cotton.

The present constitution of the Board is as follows—Sir Purshotamdas Thakurdas, Kt CIE, MBE President; Importers Panel: Haridas Madhavdas Esq., Vice President; Exporters Panel: Lalji Narani Esq., A. Geddis Esq., Ahmed K. Currimbhoy Esq., Millowners Panel: C. P. Bramble Esq., Khan Bahadur P. R. Vekharu Esq., Exporters Panel: K. H. McCormack Esq., Murlidhar S. Chokhani Esq., Importers Panel, W. G. McKee Esq., S. B. Dalal Esq., Commission Agents and Merchants Panel: Purshotam Jivandas Esq., Jannadas Ramdas Esq., Jethawallas Panel, Major W. Ellis Jones Broker, Panel.

Officers

D. Wichta Esq., N. A. Secretary, C. M. Parikh Esq., B. Com. Assistant Secretary, A. E. Meneses Esq., Acting Manager, Clearing House.

Some of the objects for which the Association is established are—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to

and prohibition of the use thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Exchange to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade to establish just and equitable principles in the said Trade to maintain uniformity of control of the said trade to fix or adopt standards of classification of cotton, to acquire preserve and disseminate useful information connected with the Cotton interest throughout all markets to decrease or insure the local risk attendant upon business and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India to improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions and to regulate admission to and prohibition of the use thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported to bring, prosecute, or defend or aid in bringing proceedings, or defending any suits, actions, proceedings, applications or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has erected a fine Exchange Building at Sewri Cotton Depot, containing 121 Buyers Rooms and 84 Sellers Rooms, and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The Inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson, Governor of Bombay, on the 1st December 1923 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 422 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 525,000 bales but during the last year of the war they averaged 975,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the

great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the 'Share Mania', and when the surrender of Leo re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton although interrupted by famine, has steadily increased. In the last season for which returns are available 1928-29 the total area in all the territories reported on was computed at 25,000,000 acres which is 1,191,000 acres the revised figures of last year. The total estimated output was 4,957,000 bales of 400 lbs. which is 28,000 bales below the yield of last year.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the output. The figures are the estimated figures for the past season, and are not exact but they indicate the distribution of the crop —

Provinces and States.	1928-29	
	Area in Thousands	Bales of 400 lbs (in thousands)
Bombay (a)	710	1,300
Central Provinces and Berar	5167	1,142

Bombay is the great centre of the cotton trade. The principal varieties are Dhollera, Broach, Comras (from the Berars), Dharwar and Coomptaa. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengala is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns Coconadas, Colmbatores and Tinnevelly. The best of these is Tinnevelly Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to lighten the

whole output, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1836, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1860. Thereafter, with occasional set backs from famine, plague and other causes its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 3 years —

	1926-27	1927-28	1928-29	1929-30

(a) Figures for Cochin are being reported from April 1928

The Textile Industry.

781

The spinning of yarn is in a large degree centred in Bombay the mills of that province producing nearly 74 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 7 per cent. and 8 per cent respectively, while Bengal and the Central Provinces produced 4.7 and 5.2 per cent. Elsewhere the production is as yet very limited.

BOMBAY ISLAND

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay Island —

	1926-27	1927-28	1928-29	1929-30
Nos 1-10	71,707,525	61,759,076	32,435,744	54,010,403

31-40	27,656,853	33,757,097	37,488,197	16,362,781
Above 40	11,531,456	11,141,821	10,027,048	15,278,339
Wastes, &c	3,976,092	6,170,243	5,720,242	6,709,881
TOTAL	807,116,133	808,940,373	648,283,327	833,409,013

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India and the Bombay Presidency produces nearly 78 per cent. of the cloth woven in India. The United Provinces produces 32 per cent, the Central Provinces 4 per cent and Madras 4 per cent. Grey and Bleached goods represent nearly 74 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States—

	1926-27	1927-28	1928-29	1929-30
Grey and Bleached piece-goods—				
Pounds	481,711,865	1,403,467,809	330,925,371	421,786,613
Yards	1,677,237,774	1,675,011,583	1,409,897,552	1,814,920,801
Coloured piece goods—				
Pounds	145,320,476	148,297,021	102,175,898	129,530,886
Yards	681,478,291	691,653,222	483,676,103	604,050,124
Grey and coloured goods other than piece goods—				
Pounds	4,151,302	4,205,147	3,330,960	4,538,020
Dozens	1,006,548	992,107	786,003	1,164,776
Hosiery—				
Pound	983,308	1,213,870	1,480,691	1,03,942
Dozens	851,910	438,237	448,809	772,404
Miscellaneous—				
Pounds	4,289,142	6,827,546	4,403,519	4,636,744
Cotton goods mixed with silk or wool—				
Pound	2,313,760	4,794,012	3,211,767	3,360,508
Total—				
Pounds	538,769,353	567,896,045	445,528,696	562,058,731

* Year ending 31st August

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy and was for some years in the East India Marine Service. He quitted this service while still a young man and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of reba, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there. This suggestion bore fruit for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-loom.—The pioneer's example was followed by Mr George Henderson of that silk firm, and in 1859 the Borneo Jute Co was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Manufacturing Co., Ltd." Four other mills followed in succession—Gouripore, Serajunge, and India Jute Mills.

"From 1868 to 1873, writes Mr David Wallace in "The Romance of Jute," the five mills excepting the Rishra mill simply coined money and brought the total of their income up to 1,250." To illustrate the pro-

perity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares, touched 68 per cent premium. The dividend for the first year, ending August 1873, was 25 per cent, for 1874, 20 per cent, and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Scorah), Giv'e, Bengal Pressing and Manufacturing Co (now the Bellaghatta Barnagore branch mill), Eastonjee (now the Central) Ganges (regis-tered in England), and Hastings owned by Messrs Birkmyre Bros of Greenock fame—in all thirteen new companies coming on all of a heap and swelling the total looms from 1,250 up to 8,500. This was too much of a strain for the new industry, and for the next few years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co and the Eastonjee—became moribund to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarbhaty, promoted by Messrs Jardine, Skinner & Co which came into being in 1877 as the result of Dr Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co from Messrs Jardine, Skinner & Co to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,160 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titagbur, Victoria and Kankarnah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,440 spindles, since merged into the Wellington branch of the Champdany Co. Between 1895 and 1900 the following new mills were started—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National Delta (which absorbed the Serajunge), and the Kinnelon. A full of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra, Nathati, Lawrence, Reliance, Belvedere, Auckland, Melvin and Northbrook.

Progress of the Industry

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows quinquennial averages from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1926-27 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1893-94 as 100 —

Average	Number of mills at work	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
			Persons employed daily (average)	Looms	Spindles
1879-80 to 1893-94	21 (100)	270.7 (100)	38.8 (100)	5.5 (100)	88 (100)
1894-95 to 1898-99	24 (114)	341.5 (126)	52.7 (136)	7 (127)	138.4 (157)
1899-00 to 1903-04	26 (124)	402.6 (149)	64.3 (166)	8.3 (151)	172.6 (196)
1904-05 to 1908-09	31 (148)	522.1 (193)	86.7 (223)	11.7 (213)	244.8 (278)
1909-10 to 1913-14	36 (171)	680 (251)	114.2 (294)	16.2 (295)	334.6 (380)
1914-15 to 1918-19	46 (219)	900 (333)	185 (476)	24.8 (451)	510.5 (580)
1919-20	60 (286)	1,209 (448)	308.4 (793)	33.5 (608)	691.8 (788)
1920-21	73 (348)	1,403.6 (519)	259.3 (668)	39.7 (722)	831.2 (938)
1921-22	70 (332)	1,428.5 (528)	266 (686)	40.6 (738)	834 (948)
1922-23	76 (362)	1,477.3 (546)	275.5 (710)	46 (737)	839.9 (954)
1923-24	74 (352)	1,568.5 (579)	280.4 (721)	41.0 (745)	854.3 (973)
1924-25	77 (367)	1,628.5 (602)	288.4 (745)	41.6 (755)	869.9 (988)
1925-26	81 (386)	2,122.4 (785)	288.4 (745)	43.0 (782)	908.3 (1,032)
1926-27	86 (409)	2,324.7 (859)	321.2 (828)	47.5 (863)	1,003.1 (1,140)
1927-28	89 (424)	2,485.8 (918)	330.4 (851)	49.0 (891)	1,043.4 (1,185)
1928-29	90 (424)	2,213.3 (818)	341.7 (881)	50.3 (914)	1,067.6 (1,214)
1929-30	90 (424)	2,134.7 (788)	331.3 (854)	50.5 (914)	1,063.7 (1,204)
1930-31	93 (443)	2,119.8 (783)	333.6 (860)	51.0 (927)	1,038.1 (1,171)

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1893-94 —

Average	Jute manufactures		
	Gunny bags in millions of number	Gunny cloths in millions of yards	Value in lakhs of Rs.
1879-80 to 1893-94	54.9 (100)	4.4 (100)	124.9 (100)
1894-95 to 1898-99	77 (140)	15.4 (350)	169.9 (136)
1899-00 to 1903-04	111.5 (203)	41 (932)	289.3 (232)
1904-05 to 1908-09	171.2 (312)	182 (4,186)	518 (416)
1909-10 to 1913-14	206.5 (376)	427.2 (9,709)	826.5 (662)
1914-15 to 1918-19	257.8 (469)	698 (15,864)	1,442.7 (1,154)
1919-20	339.1 (618)	970 (21,045)	2,024.8 (1,621)
1920-21	667.6 (1,216)	1,156 (26,273)	4,010.8 (3,218)
1921-22	342.7 (624)	1,275.1 (28,980)	5,001.5 (4,004)
1922-23	513.9 (937)	1,357.7 (30,800)	5,399.4 (4,273)
1923-24	340.7 (618)	1,120.5 (25,000)	3,999.5 (3,219)
1924-25	344.2 (637)	1,204.3 (27,350)	4,049.4 (3,265)
1925-26	413.7 (752)	1,348.7 (30,652)	4,238.3 (3,382)
1926-27	423.1 (774)	1,456.2 (33,095)	5,148.8 (4,122)
1927-28	425.0 (774)	1,461.3 (33,211)	5,752.1 (4,605)
1928-29	449.0 (818)	1,503.1 (34,161)	5,283.3 (4,222)
1929-30	463.1 (843)	1,502.7 (33,289)	5,321.8 (4,260)
1930-31	497.6 (900)	1,568.2 (35,640)	5,656.4 (4,528)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20 the exports showed an increase as compared with the average of the war quinquennium (1914-18 to 1918-19). In the following two years, the exports recorded a decrease and in 1922-23 they again made a recovery and amounted to 573,000 tons.

Jute, raw, ton	
Average 1879-80 to 1883-84	373,000 (100)
" 1884-85 to 1888-89	445,000 (119)

" 1928-29	898,000 (239)

The total quantity of jute manufactures exported by sea from Calcutta during the year 1928-29 was 868,000 tons as against 839,000 tons in the preceding year and 603,500 tons in the pre-war year 1913-14. The value of these exports amounted to Rs. 40.28 lakhs or an increase of Rs. 10.38 lakhs over the preceding year and Rs. 12.08 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs. 15.85 lakhs and of gunny cloth Rs. 24.24 lakhs as against Rs. 13.86 and Rs. 15.92 lakhs respectively in the preceding year and Rs. 12.48 and Rs. 15.58 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1904-07, the rate being Rs. 65 per bale in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10 the price having declined to Rs. 34 and Rs. 31, in 1917-18 it dropped to Rs. 38-8-0 but rose again in 1918-19 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 65 but rose again to Rs. 86.

It again declined to Rs. 64. In 1921-22 the price rose to Rs. 73 at the end of September but fell back again to Rs. 60 at the end of November and recovered at Rs. 64 at the close of the year.

Average price of jute ordinary per bale of 400 lbs.

Including Nepal

The Indian Jute Mills Association now one of the most important, if not the most important of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances.—In 1886 the existing mills, finding that, in spite of the constant opening up of new mills working results were not favourable, came to an agreement, with the late B. J. Clarke, Secretary to the Chamber of Commerce as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajganj. The first agreement, for six months dating from 15th February 1886 was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are —
Chairman—Mr B. B. Lahiri M.L.C.

Members of Committee—Mr A. N. MacKenzie, Mr D. J. Lockie, Mr J. Melin Austin and Mr G. E. Rose, M.L.C.

Working days.—With the introduction of the electric light into the mills in 1899, the working day was increased to 15 hours, Saturdays included which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr Parks came, and wrote a report which the Association promptly pigeon holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

An Association, styled the Calcutta Jute Dealers' Association, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are buyers and brokers of jute for sale to the jute mill in and around Calcutta. The present Committee—Mr Geo. Morgan, C.I.A., Chair-

man. **Members**—Mr J. A. Galloway, Mr D. King, Mr H. A. Luake, Mr G. O. Morn and Mr J. L. Rühnen.

Effects of the War.—The official review of the Trade of India in 1916-17 says—The value of the exports of raw jute increased in 1916-17 by nearly Rs 85 lakhs to Rs 1,829 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent above that of the previous year, viz. 1,490,000 tons or 8,840,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly via Dunkirk), Russia (via Vladivostok) and Brazil took greater quantities. There were of course no exports to enemy countries which took more than 27 per cent in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined and have since gone still lower.

Jute Manufacturers.—The value of the exports now approximates to Rs 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs 241 lakhs of which Rs 168 lakhs were due to higher prices and Rs 78 lakhs to an increase in the volume of exports. There were also an increase of Rs 113 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, and bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,222 looms and 863,850 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 536 million bags to 342 million bags, but the value increased from Rs 13.67 lakhs to Rs 15.21 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards—valued at Rs 17.92 lakhs and Rs 24.24 lakhs respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the Decussate hemp plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft to 12 ft long, of an exceptionally light colour, well cleaned, and of good strength.

It was valued at £18 per ton with Bimlipatam jute at £12 10s and Bengal first mark jute at £17 per ton. Decan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties. It is thought in the prepa-

ration of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held, but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent from 197,412 cwt to 269,487 cwt and the value from Rs 26 93 lakhs to Rs 36 68 lakhs.

THE WOOL INDUSTRY

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikhar, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet and in normal years from Afghanistan. Imports of raw wool in 1929-30 amounted to 17 million lbs. valued at Rs 51 7 lakhs. Exports of raw wool were valued in that year at Rs 4 42 lakhs. The increase in the supplies from Australia has been continuous during the last four years. In 1929-30 imports of wool from Australia were valued at nearly Rs 22 lakhs.

Production in India.—The production of wool in India is estimated at 60 million lbs. the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects in actual fact the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of woollen mills at work in British India in 1902 was three, with an authorised capital of Rs 88,50,000, and employing 23,800 spindles and 624 looms. The number of persons employed in the industry then was 2,559, and the quantity

of woollen goods produced 2,148,000 lbs. At the end of 1917 the number of mills had risen to five, with an authorised capital of Rs 2,00,00,000, employing 39,608 spindles and 1,158 looms. The weight of goods produced then was 9,744,204 lbs and the number of persons employed 7,824. With regard to Indian States there was one mill in Mysore in 1903 with a capital of Rs. 6,00,000, employing 1,430 spindles and 46 looms. The quantity of goods produced was 1,196,000 lbs and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs 15,00,000, the quantity of goods produced to 1,724,087 lbs. and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the matter of war requirements, and they were all employed to their fullest capacity in supplying army demands for great coat cloth, serge puttees, flannel blankets and hosiery. Their total capacity, however, was not sufficient to meet the full requirements of the army and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merino and cross breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from cashmere, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mehta, Govt Press, Calcutta, (1919).

Silk

In the early days of the East India Company the Indian Silk trade prospered greatly and various sub-tropical races of the silkworm were introduced. But the trade gradually declined for the following reasons —

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *korah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry feeding worms—Sir George Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under two sections, viz., Bombycidae, the domesticated or mulberry-feeding silkworms, and Saturniidae, the wild or non mulberry feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well known purely indigenous silkworms, the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially those of the great central tableland, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The *eri* silk, on the other hand, is so extremely

difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs 8,000 a year to the Tata firm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut. Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs 2,000 towards the expenses. Sir Dornabji Tata has also made a donation of Rs 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross breeding experiments with a view to establish a multi voltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a Bulletin (No. 48 of 1915) entitled 'First Report on the Experiments carried out at Pusa to improve the Mulberry Silk Industry'. In a short Preliminary note

Mr. Bainbridge Fletcher (Imperial Entomologist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa, in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends

largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915 by Mr. V. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stiffing and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54½ lakhs. In 1920-21 exports of raw silk amounted to Rs. 30 lakhs and of silk manufactures to nearly Rs. 2½ lakhs.

Indigo

Indigo dyes are obtained from the *Indigofera*, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wool industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however than troubles next arose in Bengal itself through

misunderstandings between the planters, their cultivators and the Government which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the al dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicesitude, meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural versus synthetic indigo (See Watt's "Commercial Products of India"). In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1916 a conference was held at Delhi when the possibility of assisting the natural indigo industry was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs. Howard of Pusa in Bulletins Nos. 51 and 54 of

the Agricultural Research Institute, Other aspects of the question were fully examined last year in the Agricultural Journal of India by Mr W. A. Davis, Indigo Research Chemist to the Government of India. An Indigo Cess Bill was passed in the Imperial Legislative Council in 1918. It provides for a cess on Indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of Indigo the proceeds of the cess being received and expended by Government.

Decline of the Industry—Since synthetic Indigo was put upon the market, in 1897 the natural indigo industry of India has declined very rapidly. Apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

The total yield in 1929-30 was estimated at 14,600 cwt. The exports which are no longer of much importance amounted only to 900 cwt.

OILS AND OIL CAKES

In 1928-29 and again in 1929-30 seeds ranked fourth in order of importance in India's export trade, the first three groups being jute and cotton raw and manufactured and footers. The total exports of oilseeds in 1928-29 amounted to 1,185,000 tons valued at Rs. 26,46 lakh and showed a decrease of 10 per cent in quantity and 11 per cent in value below the preceding years figures. Compared with the pre-war average there was a decline of 18 per cent in quantity but an increase of 9 per cent in value. The table below shows the quantities of the principal kinds of oilseeds exported during the last three years and in the pre-war quinquennium. Owing to a shortage of world supplies Indian linseed was in better demand but exports of all other varieties of oilseeds showed a decided drop. During the first half of the year prices remained at a reasonable level. Later in acute depression set in as a result of the financial crisis in the United States of America which had its repercussions in Europe and prices began to decline.

	Pre-war 1927 average	1928-29	1929-30	1925-26
	(Thousands of tons)			
Linseed	379	222	157	248
Rape seed	278	66	77	44
Groundnuts	212	613	788	714
Caster	114	122	121	106
Cotton	240	153	131	98
Sesamum	119	11	80	11
Copra	31			
Others	65	23	24	14
Total	1,453	1,210	1,328	1,195

A pamphlet on the subject recently published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oilseeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil

mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of coconut oil and linseed oil and an increase in the export of oil seeds which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil milling industry in India.

There are three difficulties with which any proposal to develop in India an oil milling industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils other than coconut oil have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Tea cultivation in India is chiefly in Assam, Bengal and Southern India, the cultivation elsewhere being comparatively unimportant.

The total production of tea in India was estimated at 133 million lbs in 1929 as compared with 404 million lbs in 1928 and 391 million

lbs in 1927. Assam contributed 60 per cent., Northern India (excluding Assam) 27 per cent and Southern India 13 per cent, as compared with 61, 25 and 14 per cent, respectively, in the preceding year. The statement below shows the development of the industry during the past years.

	1924	1925	1926	1927	1928	1929
ACREAGE	Acres	Acres	Acres	Acres	Acres	Acres
Assam	413 300	416 500	420 400	424 000	427 200	429 600
Rest of Northern India	204 400	211 200	212 700	214 200	218 700	223 000
Southern India	97,000	100 000	106,300	117 800	127,100	138 200
Total	714,700	727 700	739 400	756 000	773 000	788 800
PRODUCTION	lbs (1 000)	lbs (1,000)	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs (1 000)
Assam	297 153	22, 185	241 982	236 828	240,01	258 941
Rest of Northern India	91 301	89,017	99 804	101 923	100,475	117,028
Southern India	46,752	49,305	51 147	63 109	67 272	68 664
Total	375, 50	363 507	392 933	399 920	408,766	433 293

Exports during the same years were as follows —

Exports of tea by sea to foreign countries

	1924-25	1925-26	1926-27	1927-28	1928-29	1929-30
	lbs (1 000)	lbs (1,000)	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs (1 000)
From Northern India (Calcutta and Chittagong)	299 747	280 024	304 157	15 109	309 845	338 963
From Southern India (Madras ports)	37 717	43,945	41,172	46 142	49 302	50 179
From Bombay Sind and Burma	2 643	2,578	1,373	761	43	600
Total	340 107	326,545	350 502	362,012	359,784	377 142

During 1929-30 the exports rose by 7 per cent in quantity and fell by 2 per cent in value as compared with 1928-29 and amounted to 377 million lbs valued at Rs 26 crores against 360 million lbs valued at Rs 27 crores in the preceding year. The United Kingdom raised her demands of black tea from 208 million lbs valued at Rs 22½ crores in 1928-29 to 317 million lbs valued at Rs 22 crores in 1929-30. The exports of green tea to that country during 1929-30 amounted to 480 000 lbs as against 439 000 lbs in the previous year. The share of the United Kingdom in the total exports was about 84 per cent against 83 per cent in

1928-29. The re-exports of Indian tea from the United Kingdom increased from 52 million lbs in 1928-29 to 5½ million lbs in 1929-30 of which the Irish Free State took 19 million lbs, Russia 10 million lbs, other European Countries 12 million lbs, the United States of America 6 million lbs and Canada 3 million lbs. Exports of Indian tea to Russia, Persia, Canada and the United States of America increased from 4, 4, 11 and 8 million lbs to 6, 12 and 8½ million lbs respectively while those to Iraq, Ceylon and Australia declined from 2, 5 and 5½ million lbs to 1, 5 and 4½ million lbs respectively during 1929-30.

EXPORTS AND PRICES

The following table shows the quantity of Tea exported by sea and by land to Foreign Countries from India, Ceylon, China and Java in the years 1900-01 to 1929-30 with variations in index numbers, taking the figure of 1896-97 as 100.

	India ‡	Ceylon *	China †	Black and Green	Brick, table and dust	Java ‡
	lbs	lbs	lbs	lbs	lbs	lbs
1900-01	192,800,638 (138)	149,264,608 (138)	144,270,333 (100)	144,270,333 (100)	52,180,967 (64)	
1901-02	216,770,269 (147)	144,576,608 (131)	119,390,000 (74)	119,390,000 (74)	52,554 (64)	
1902-03	185,710,981 (122)	150,639,707 (137)	128,226,826 (79)	128,226,826 (79)	78,519,406 (100)	
1903-04	209,582,150 (139)	149,627,250 (135)	140,667,867 (85)	140,667,867 (85)	83,813,600 (107)	
1904-05	214,800,325 (142)	157,929,587 (143)	132,266,933 (83)	132,266,933 (83)	61,407,733 (78)	
1905-06	216,770,269 (147)	171,429,703 (139)	112,152,533 (69)	112,152,533 (69)	70,784,207 (91)	25,450,156 (100)
1906-07	238,091,288 (151)	171,429,703 (139)	108,984,534 (67)	108,984,534 (67)	70,508,133 (101)	27,455,019 (107)

Tea Cess Fund—In 1908 an Act known as the Indian Tea Cess Act IX of 1908 was passed at the request of the trade for promoting the sale and manufacture under this Act a duty of $\frac{1}{2}$ pie per lb was levied on all Indian tea exported upto the 30th April 1921. From 1st May, 1921, the rate was raised to $\frac{1}{2}$ pie per lb and from the 21st April 1923 to 6 annas per 100 lbs ($\frac{1}{2}$ pie per lb). The whole of the amount collected is made over to a fund known as the Tea Cess Fund which is placed at the disposal of a Committee appointed for the purpose, and Government merely acts as a revenue collecting agency. The total amount collected in 1929-30 was Rs 14,10,000 as against Rs 13,53,000 in 1928-29 and Rs 13,75,000 in 1927-28.

Quantity of Indian Tea exported by sea* (distinguished according to countries of final destination) and by land, in the years 1923-24 to 1929-30

* Including shipments from the State of Travancore

(a) Tea consigned from British India to Ceylon is almost entirely transhipped at Colombo to other countries and does not, therefore, appear in the Ceylon Customs Returns as imports into Ceylon.

† Includes Itanq

‡ These figures are not strictly comparable with the previous figures as they represent all the trade registered at selected railway stations adjacent to the land frontier, though a fair portion of them is frontier trade. The old system of registration of frontier trade by means of clerks posted on the important trade routes across the frontier has been discontinued from 1st April 1925. The figure for 1925-26 excludes exports from Burma.

Coffee.

The history of the introduction of coffee into India is very obscure. Most writers agree that it was brought to Mysore some two centuries ago by a Mohammedan pilgrim named Baba Budan, who on his return from Mecca brought seven seeds with him. This tradition is so universally believed in by the inhabitants of the greater part of South India, that there seems every chance of its being founded on fact. About the beginning of the 19th century there is no doubt coffee had found its way to India, and in 1823 a charter was granted to Fort Gloster, near Calcutta authorising it to become a cotton mill, a coffee plantation and a rum distillery. Some of the coffee trees planted in fulfilment of that charter are supposed to be still alive, and about the same time coffee was successfully grown in the Botanic Gardens, Calcutta, but the industry of coffee planting nowhere found an abiding place on the plains of India but migrated to the hills of South India, in Mysore more especially, and thus into the very region where tradition affirms it had been introduced two centuries previously.

The first systematic plantation was apparently Mr. Cannon's near Chikmagalur. This was established in 1880. It is supposed, however, that Major Bevan may have actually grown coffee on the Wynad at a slightly earlier date and that Mr.

Cockburn's Shevaroy plantation bears the same date as Mr. Cannon's. In 1840 Mr. Glesson formed a plantation at Manantoddy, and in 1844 plantations were organised on the Nilgiri hills.

The Position of the Industry.—The Indian coffee crop of 1928-29 was estimated at 28 million lbs. or nearly 8 million tons, less than in the preceding year. Exports during 1928-29 which were chiefly drawn from the 1924-29 crop declined by 7 per cent in quantity from 198,000 cwt. to 184,000 cwt. and by 14 per cent in value from Rs. 1.69 lakhs to Rs. 1.45 lakhs. With the exception of the United Kingdom and a few minor countries, all the principal customers reduced their purchases. Shipments to the United Kingdom which were comparatively low in 1928-29 recovered to 60,000 cwt. in 1929-30 as compared with 41,000 cwt. in the preceding year and 76,000 cwt. in 1927-28. France and Norway further curtailed their requirements from 50,000 and 14,000 cwt. to 44,000 and 12,000 cwt. respectively. There were also reduced shipments to Germany, the Netherlands and Belgium which together took 4,000 cwt. as against 4,000 cwt. in the preceding year. Exports to Iraq and the British Colonies fell to 1,000 cwt. each from 11,000 and 14,000 cwt. respectively in 1928-29 while Australia and New Zealand together took 5,000 cwt. as against 6,000 cwt. in 1928-29.

INDIAN TOBACCO

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated and gradually the industry became identified with three great centres, namely (1) Eastern and Northern Bengal (more especially the District of Rangpur), (2) Madras, Trichinopoly, Dindigul, Coonoor and Calicut in Southern India, and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Poona, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Poona is the production of a

good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridizing new kinds of tobacco suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called Burmese tobacco and 'Havana tobacco'. Of the Burmese tobacco there are two main varieties "Peywet-gyl," the large-leaved variety and "Seywet-gyun," a smaller leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are—(1) the Coimbatore and Dindigul tract of Madras, where the *Uni-Kayal* and *Wera Kayal* varieties are largely grown, the former supplying the Trichinopoly cigar; (2) the Godavari Delta of Madras; (3) the Rangpur tract of Bengal; (4) the Districts of Bihar and Orissa; (5) Guzerat in Bombay and (6) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and piled in heaps in stacks to ferment. They are then

ried into bundles of 25 or 80, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan shaped. In this condition they are baled the broom like ends projecting outwards. By varying the degree of fermentation of the leaves different qualities of tobacco are obtained. A black variety is used in India for cake tobacco and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

Exports.—Exports of unmanufactured tobacco recorded a substantial improvement in 1928-29 and amounted to 33 million lbs. valued at Rs. 1.23 lakhs in 1928-29 as compared with 28 million lbs. valued at Rs. 99 lakhs in the preceding year, an increase of 18 per cent in quantity

and of 24 per cent in value. In 1929-30 the exports fell to 26 million lbs. valued at Rs. 99 lakhs. The decrease was most noticeable in the shipments from Bombay, which were 4 million lbs. compared with over 8 million lbs. in the previous year. Owing to the preference accorded to Empire-grown tobacco, there has been a remarkable increase in the use of Indian tobacco in the United Kingdom although there is yet room for further improvement in the direction of curing, packing and grading of the Indian leaf. Before the war the average exports of unmanufactured tobacco from India to the United Kingdom amounted to 135,000 lbs. only while in 1928-29 the exports totalled 12 million lbs. compared with 8 million lbs. in 1927-28 and 10 million lbs. in 1926-27.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the *Erythroxylon* Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effective in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching an alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth, though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the 'Cocaine habit.' The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims, but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of

foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Varmagao and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the customs houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police Officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese Sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out. In 1922-23 the largest seizure of cocaine made by the Excise Department in the Bombay Presidency was one of 10,000 grains while in 1923-24 a seizure of 24,000 grains was effected. In October 1924 the Excise Department made a seizure of 48,500 grains in a single case.

The Review of the Customs Administration in India 1925-26 contains the following paragraph:

'Most of the cocaine seized on import into India appears to have come from the Far East. The biggest seizures during the year were—

825 oz at Rangoon
625 oz at Calcutta
25 oz at Bombay
24,193 and 149 oz at Calcutta

The total amount of cocaine seized by Customs Houses during the year was 9,453 oz.

The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any legitimate seller as it was ten years ago but scores of cases in the Police Courts show that the retail trade thrives though to a diminished extent in Bombay. High profits ensure the continuance of the trade.

The law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession and as far as 6 grains may be possessed by any person if covered by a bona fide prescription from a duly qualified Medical practitioner. The maximum punish-

ment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India as though India were the main (or perhaps the only) source of the most noxious drug on earth. But to the League of Nations, proceedings in regard to opium and again mainly under the leadership of American representatives, come India and the Government of India, held up by humanity as traffickers in opium and as therefore obstacles to making the world a better place to live in. In fact neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries centuries of inherited experience have taught the people of India discretion in the use of the drug, and its abuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries so much for the internal position.

The reason as regards exports is equally clear. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies because of the stringent regulations by which its manufacture has always under the British authorities been regulated in India in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have in recent years indeed at the instance of America been numerous international conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade.—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject but it is unnecessary to go further back into those than 1911. On 8th May of that year there was drawn up between India and China an agreement under which the Government of India assented to (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes (2) the partial closure of China to Indian opium by

provinces including not only stoppage of transit passes but also to its port towns Shanghai and Canton excepted. (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China and (4) revision of the agreement on due notice by either party. This agreement in its terms made it was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China in the agreement undertook among other things to reduce production in *China pars passim* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement the Government of India undertook in order to lessen the danger of smuggling into China and as an earnest of their desire to assist that country strictly to continue the remainder of Indian opium export to the legitimate domains of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years she progressively reduced the permissible export until in 1914 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction and eventual abolition of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China but exports to non-China countries have on the voluntary initiative of India been subjected to successive restraining agreements with the countries concerned. The Government of India introduced with effect from 1 January 1923 a certi-

float system recommended by the League of Nations whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1928 in order to fulfil the spirit of her international agreements India decided though she was in no way bound by her letter to do so to reduce her exports to Far Eastern countries for other than medicinal and scientific purposes by 10 per cent yearly so as to extinguish them altogether by December 1935 and effect has been given to that policy at considerable financial sacrifice. India is the only country that has made any considerable sacrifices of the kind.

International Aspect of the Problem —

It was only during the processes and negotiations by which the Indian opium export trade to China was being suppressed that the Opium question began to assume a widely international aspect. This happened on the initiative of the U.S.A., at whose instance an International Opium Commission met at Shanghai in 1909 and formulated a series of recommendations for the suppression of opium smoking and the regulation of the use of opium and morphia. The United States thereafter advanced a further proposal for an International Conference at the Hague. This met on 1 December 1911 and finally drew up a convention on the subject the terms of this document presented no new ideas to the Government of India. Their provisions India had long observed. As regards morphia and cocaine with which the Hague Conference concerned itself the uses of these drugs in India had long been subject to exceedingly strict regulations. But these two drugs the use of which for other than medicinal purposes invariably takes the form of dangerous vice were becoming a menace to the world. They were not included within the scope of the proposals submitted by the U.S.A. for the consideration of the Conference. It was mainly owing to pressure by the Government of India that they were included within the terms finally signed and the rigid and universal application of the articles of the Convention which apply to them would rid the world of the drug evil.

As regards prepared opium, that is to say smoking opium India does not and never has exported it and the sale of it in India is prohibited. No opium is exported from India to the United States of America. None has been exported to Great Britain by private merchants since 1916. Exports to Great Britain are strictly limited to medicinal requirements and go officially from the Government of India to the British Government. Nor is Indian opium exported to any other country in Europe.

Indian Uses of Opium.—There is a fundamental difference between the problem in India and that in foreign countries, particularly in

America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them it is never used to morbid ends but always abused and the results have no relation to the result of moderate opium eating in India. The fact appears to be that people acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India generally up to smoking seems to do little if any harm. Smoking which is the habit of the Far Eastern races rather than of the Europeans seems to do much more harm in India than eating walk on the other hand where smoking is in ordinary use competent authorities (e.g. the Royal Commission on Opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to her commitments has placed upon her in regard to home consumption. But the principal effect upon India of these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time honoured.

The Commission of 1923.—Despite all this the principles of Indian internal opium policy essentially remain, subject to certain changes of scientific opinion in regard to medicinal uses those laid down by a Royal Commission which was appointed by His Majesty's Government mainly as a result of the activities of the Society for the Suppression of the Opium Trade in 1923, to inquire into all the circumstances connected with the production and sale of Indian opium. The Society which was largely instrumental in bringing about the institution of the inquiry, recorded its opinion that the appointment of the Commission constituted the greatest and most solid forward step that the movement for the suppression of the opium trade has yet made and considered that the Royal Commission was as fair-minded and impartial a tribunal as the Society could have desired to hear its case. The results of the inquiry were published in 1926 in seven volumes.

The Royal Commissioners examined with the greatest care the problem of opium consumption in India and in brief they found that it was not only subject to careful regulation but was governed by longstanding and admirable disciplinary habits among the people. Excessive use, they found was exceptional and condemned by public opinion. As regards the legal restric-

tion of its use to medical needs they advised that Government could do no more than limit the extent of cultivation and hold a monopoly of manufacture and wholesale supply and that to draw a line in popular opinion between medical uses and those not strictly so describable would be impracticable. They agreed that the mass of Indian opinion was opposed to prohibition as an unnecessary restriction on individual liberty and interference with established customs and habits. Apart from the religious question they found Indians generally to consider the use of alcohol to be more objectionable, more injurious and more disgraceful.

The Government of Lord Hardinge, in a Despatch to His Majesty's Government in 1911 and that of Lord Reading in a despatch dated 24th March 1921 both in the same words took their stand on the conclusion of the Royal Commission that the opium habit as a vice scarcely exists in India that opium is extensively used for non medical and quasi medical purposes in some cases with benefit and for the most part without injurious consequences, that the non medical uses are so interwoven with the medical uses that it would not be practicable to draw a distinction between them in the distribution and sale of the drug and that it is not necessary that the growth of the poppy and the manufacture and sale of opium in British India should be prohibited except for medical purposes. The despatch of Lord Hardinge's Government was approvingly quoted by Lord Reading's Government a few years ago. It has long been recognised that any attempt to eradicate by law the use of opium would be open to all the objections involved in bureaucratic interference with popular custom. Making it is largely quasi medical it is used for the prevention, cure and alleviation of disease as a prophylactic, as an anodyne and as the commonest and most treasured household medicine of the people, to whom qualified medical assistance is inaccessible. It is also taken as a sedative, as a tonic and as a restorative to lessen or avert fatigue and in other ways in which, when moderately used it is relatively innocuous.

Present Policy—The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is and has been one of non interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the strongest universal desire of human beings, particularly those whose occupations involve exposure or severe bodily exertion for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to express.

Opium is under the current Indian constitution a Provincial transferred subject. Nevertheless owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All India Conference, which was opened at Simla by Lord Irwin on 5 May, 1920, to consider the question of certain areas where opium consump-

tion was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The conference after an exhaustive discussion of the phenomena presented by the various areas selected for investigation and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Porozone District of the Punjab might be held to provide cases for further inquiry. In other cases the conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were, staple exportations showing harmful causes for what appeared to be excessive consumption in many places.

While speaking at the Second Geneva Opium Conference on 10 January 1925 Lord Curzon stated that he had seen figures apparently taken from a report made by the United States Treasury to the effect that consumption was greater in America than in India. The estimate framed by the Advisory Committee of the League of the annual requirements of opium for strictly medicinal and scientific purposes is 600 milligrammes or 0.25 grains per capita which is roughly equivalent to 6 Indian rupees per 10,000. The Health Committee of the League opined that this could be reduced to 550 milligrammes or 0.94 grains in countries possessing a well developed medical service. The consumption per capita in British India during 1924-5, worked out at 17.2 grains per head. The rate of consumption has certainly fallen since the compilation of this published figure. The amount includes veterinary uses and these are extensive though to recur statistics of the quantity of opium given to animals is impossible. Allowance also has to be made for the poor morphine content of Indian opium which is about 9 per cent at 90 deg. concentration and the limited number of medical practitioners trained on Western lines to administer strictly measured doses. Lord Curzon's statement at the League of Nations was received with extreme criticism by Mr Porter of the American delegation. Mr Porter said the American statistics cited had been distorted and that Lord Curzon's observations were a vile slander upon the people of the United States. Lord Curzon apologised and withdrew his statement. But Mr Frederick Wallis Commissioner of Correction, New York writing in the current *History Magazine* for February 1925 showed the annual per capita consumption in Italy to be one grain in Germany 2 grains, in England 3 grains in France 4 grains and in the United States 36 grains. In current *History* for March 1925 Mr Wallis defended this last figure and said that in view of the smuggling into the United States it would appear to me that the consumption would be much larger than the Government officially gave as 36 grains.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord.

GLASS AND GLASSWARE

The imports of glass and glassware in 1920-21 registered a considerable improvement the value having risen from Rs. 2.77 lakhs to Rs. 2.52 lakhs. A remarkable recovery was made by Czechoslovakia which bute fair to challenge Japan's supremacy in this trade. Under cover of price reduction Japan pushed ahead her sales which were valued at Rs. 74 lakhs as compared with Rs. 70 lakhs in 1928-29 and Rs. 69 lakhs in 1927-28, the share of Czechoslovakia was also better by Rs. 14 lakhs and amounted to Rs. 714 lakhs. The United Kingdom and Italy recorded small increases supplies from these countries being valued at Rs. 22 lakhs and Rs. 6 lakhs respectively. Germany's contribution on the other hand showed a steady decline from Rs. 48 lakhs in 1927-28 to Rs. 40 lakhs in 1928-29 and Rs. 34 lakhs in 1929-30.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Elphinstone mentions it in Indian Glass as being of superior quality. As a result of recent archaeological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the industry. But no further trace of ancient Indian Glass Industry as such survive yet it is certain that by the sixteenth century, it was an established industry producing mainly bangles and small bottles. The quality of the material was inferior, and the articles turned out were rough. Beyond this stage the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been started a number of them have failed while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well defined classes of the industry in its present stage: (1) Indigenous Cottage Industry and (2) the modern Factory Industry.

(1) The Indigenous Cottage Industry which is represented in all parts of the country but has its chief centres in Ferozabad District of U. P. and Belgaum District in the South is mainly concerned with the manufacture of cheap bangles made from glass cakes or blocks made in larger factories. The industry is at present in a flourishing state and supplies nearly one third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose silky bangles are ousting the old type Indian ones.

(2) The modern Factory type of organization of this industry is just in its infancy at present. The existing factories either stop at producing glass cakes for bangles as in Ferozabad or simple kind of lampwares and bottles. With the existing state of knowledge and machinery in

India they can neither produce sheet and flat glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them new factories were started and old revived which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 factories engaged in the production of lampware of which two or three only produce bottles and cellophane also. The chief centres for the former kind are Bombay, Subulpoore, Allahabad and Bijnor and Ambala while bottles are only manufactured at Naini and Lahore and recently at Calcutta.

During the later years of the war period a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventable causes prominent among which were (1) Lack of enlightened management, (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to, (3) Bad selection of site. An ideal site for a Glass Factory would be determined by (a) nearness of quartz and fire clay, (b) nearness of fuel, and (c) by the nearness of market. At least two must be present. In some concerns two were absent. (4) Specialisation was lacking some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles etc. (5) Lack of sufficient fixed capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Lack of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and inefficient. They, therefore, master the situation and are unamenable to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal fields. (5) To a certain extent, competition from Japan and other European countries.

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98-99% in a powdered form. This Alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Banglo manufactures as the latter cannot be used in the manufacture of glass which is to compete with the imported article. These points must be carefully noted for future guidance.

The Industry developed considerably under war conditions but in peace times, in this transition stage immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix B) viz "The Glass Industry, even in its simplest form is highly technical and can be effec-

tly carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

HIDES, SKINS AND LEATHER

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good, there was a large demand for hides, and prices ruled high. While in the continental markets stocks were high owing to overtrading in the previous year the United States had a shortage which was estimated at approximately two million pieces. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries especially to the great emporium of Indian hides Hamburg were stopped and exporters had to find new markets for the raw material. The raw hide business of India, it is well known, has hitherto been largely if not quite entirely, in the hands of German firms or firms of German origin. Germany has had the largest share of India's raw hides. In the four months before the outbreak of war she took 89 per cent of the total exports. In 1912-13 she took 32 per cent and in 1913-14, 85 per cent. Raw hides were exported to Trieste in considerable quantities whence they were taken to Germany or Austria. In the four months before the outbreak of war 15 per cent of India's exports passed through Trieste. In 1913-14 the percentage was 21.

The Trade experienced a severe depression in 1929-30 the total value registered having declined from Rs. 18.87 lakhs to Rs. 16.03 lakhs. This rather heavy set back was due mainly to reduced consumption in the principal importing countries viz the United Kingdom, Germany and the United States of America. The average declared value for the exports showed a slight decline from Rs. 112.4 to Rs. 111.1 per lb in the case of tanned hides and skins although in the case of the raw stuff there was a nominal improvement from Rs. 0.10-4 to Rs. 0.10-9 per lb.

Conditions of the Trade—The trade in hides and skins and the craft in leather manufacture are in the hands of other than Mohammedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of

obtaining capital and by the religious objection which assigns it to a position of degradation and neglect. It has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Hides—The fifteenth report of the Imperial Economic Committee states that Indian hides both raw and partially tanned are largely used for the upper leather of boots, partially tanned skins are used for fancy leather articles bookbinding and for covering the small rollers used in cotton mills for drawing the thread. Raw sheepskins are used on similar articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of placoid of which commodity the United States is the chief producer. Lightly tanned goat skins are sent direct to the United States. The consumption of placoid in the United Kingdom has remained stationary during the last five years while the raw production up to 1924 increased somewhat and exports have slightly grown.

The chief markets for Indian raw hides are in Central and Southern Europe Hamburg, being an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta before the war largely the result of the work of German firms established there had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes among which may be cited several changes the entry into the trade of new and at first inexperienced firms. The increased cost of arranging for supervision at up country points. It has however been recovering its reputation.

Protecting the Industry—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919 when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose

an export duty of 15 per cent on hides and skins with a rebate of 10 per cent on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and falling this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." (George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements. If some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I

have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate.

Indigenous methods.—India possesses a large selection of excellent tanning materials such as *Acacia* pods and bark, Indian *sunnah*, the *Tanner's* *cassia*, *Mangrove*, and *Myrsin*. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense though purely local demand.

INDIAN INVENTIONS AND DESIGNS

A handbook to the Patent Office in India which is published by the Government Press Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers, and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English Statute of Monopolies which was enacted in 1523 the 21st year of King James the First. In part this Act has been repealed, but the extant portion of the more important section 9 is as follows:—

Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made, and of none other."

The existing Indian Patent Law is contained in the Indian Patents and Designs Act, 1911, supplemented by the Indian Patents

and Designs (Temporary Rules) Act, 1916 and by the Rules made under those Acts. The Patent Office does not deal with trade mark or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs as they always have done in matters of major interest. One main difference exists, however as owing to the absence of provision of law for the registration of trade marks, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patents and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Farganas. This of course includes Burma, but it does not embrace the Native

States Of the latter three viz (1) Hyderabad (Deccan), (2) Mysore, (3) Gwalior have ordinances of their own for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. The object of the Act of 1911 was to provide a simpler more direct and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They gave further protection both to the inventor by providing that his application should be kept secret until acceptance and to the public by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established with power to dispose of many matters previously referred to the Governor General in Council and provision was made for the grant of a sealed patent instead of for the mere recognition of an exclusive privilege. The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

Important amendments have been made in the Indian Patents and Designs Act since 1911, the most important being the priority given to Indian inventors over others to apply for British patents within 12 months from the date of the Indian application. Similarly an applicant for a British patent has priority over other applicants in India for 12 months from the date of his British application.

Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following.

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years instead of 14 years.

Patent of Addition will be granted on the original patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent.

Fresh provisions are made for the use of an invention by Government.

Government will grant licences to the public on application if the inventor refuses to do so on reasonable terms.

Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

Printed Specification of applications for patents, which have been accepted (8 annas per copy), may be seen free of charge, together with other publications of the Patent Office at the following places —

Note.—The unrounded average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual averages and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 is the sum of the yearly figures in item 8.

(a) Excludes gold imported and exported on behalf of the Bank of England.

() Figures are for calendar year ending 31st December.

The Indian Tariff Board, 1930.

Four Reports of the Indian Tariff Board have been published since its work was last reviewed in the Indian Year Book. These are—

- (1) On the salt industry
- (2) On the gold thread industry
- (3) On additional protection for galvanised sheets and
- (4) On certain railway materials made of steel

Salt—This subject was referred to the Board as the result of a decision in the Legislative Assembly in the budget session of 1928. The Board was requested to consider whether it was desirable in the national interest that steps should be taken to encourage the production of salt in India suitable for consumption in those markets which are at present largely supplied from abroad. Its conclusions may be summarised under the following heads:

The Market for salt—The market for imported salt in India proper to which the Board confined itself reserving Burma for a later report is approximately 500,000 tons and is confined to areas normally served from Calcutta and Chittalong. In this market the primary considerations by which the quality of any particular class of salt is judged are whiteness, evenness of grain and absence of moisture. On these (a) Imported salt falls into two main classes (a) Brine salt such as Liverpool and Hamburg salt and (b) Solar salt such as Port Said, Aden and other Red Sea salts. The tendency in the last few years has been for the cheaper solar salts to replace brine salts. As the result of this tendency the proportion of the market held by Liverpool salt has declined from 7 to 15 per cent. The price of salt in Calcutta fluctuates violently mainly owing to the operations of Combines and dealers. The latest of such combines was the Salt Importers Association of Bengal which was formed in 1927 and artificially maintained prices at a high level during 1927 and 1928.

Production in India—The annual production of salt in India is about 1,400,000 tons of which however a very large proportion is dirty and unsuitable for crushing. Except in the salt mines of the Punjab and the North West Frontier Province where rock salt is mined or quarried the methods of manufacturing are in essence the same throughout India namely solar evaporation. The Board after careful examination of these methods found that salt of a quality suitable for consumption in the Bengal market could be manufactured by solar evaporation in any part of India where a brine supply is available either from the sea or from sub-soil sources, the cost of manufacture necessarily varying according to local conditions. They held that Karachi and Port Okha in the Baroda State enjoy certain natural advantages which *prima facie* indicate them as the most suitable centres for the manufacture by solar evaporation of fine white salt not inferior to Aden salt and that from the Khewra salt mines in the Punjab salt could be obtained which

when crushed compares favourably with Liverpool salt. But although salt of the required quality can be produced in India the present production is only about 15,000 tons. The Board was however satisfied that the output of existing works at Okha and Karachi could be increased to 150,000 tons of salt and that the output of rail borne salt—that is salt from the Khewra mines and from Samlhar and Ischledra in Rajasthan could be increased by 1,000,000 tons which if crushed would be suitable for the Bengal market. On the assumption that Calcutta continued to import 500,000 tons of salt from Aden this would mean that practically the whole demand of the Bengal market (500,000 tons) could be supplied by India and Aden.

Cost of sea borne and Rail borne sale—The Board's investigations have led to the conclusion that the price at which the consumer may normally expect to obtain sea borne salt is 13 annas 11 pies per maund or approximately Rs. 86 per 100 maunds for Calcutta. At existing rates Khewra salt could be landed at Calcutta at 13 annas 10 pies per maund and Samlhar salt at 13 annas 1 pie per maund. If allowance be made for the fact that Khewra salt approximates in quality to Liverpool salt and that the latter fetches about Rs. 7.80 per 100 maunds more than solar salt it appears that rail borne salt can be landed in Calcutta at a price not more than that at which the consumer on an average may expect to obtain sea borne salt.

Case for assisting the salt industry and possible methods Before considering the extent to which national interests would be served by assisting the manufacture in India of salt suitable for the Bengal Market the Board examined the position of Aden in relation to India's salt supply. Their conclusion under this head was that there was no ground for discrimination between Aden and Karachi or Okha. As regards sea borne salt that is salt from these three sources of supply they held that if the whole Bengal market were supplied from them the total labour force required would not amount to more than 4,000 and the additional employment afforded to Indian labour would not be large. If profit were taken at the rate of 10 per cent per annum the additional profit retained in the country would not exceed Rs. 12 lakhs. Since salt is normally transported by sea from Aden, Okha and Karachi the existence of adequate supplies at these sources would not necessarily guarantee Bengal against a shortage of white salt in war time. Their conclusion therefore was that whilst the increased supply of sea borne salt from these sources was to some extent in the national interest the advantage was not so great as to justify any drastic action. The case in regard to rail borne salt was very different. The development of the supply of such salt to the Bengal market offered the advantages that it would be a guarantee against war time shortage that it would provide additional traffic for the railways and that it would bring about a reduction in the price of salt as the

result of increased production especially at Khewra. The Board's conclusion therefore was that in the national interest the Bengal market should be supplied as far as possible by rail borne salt but that as far as this source of supply is insufficient, Indian sea borne salt should be encouraged provided that no heavy burden were thereby imposed on the country or the consumer. They recommended that Government should undertake a thorough survey of these sources of supply with a view to their development and that the question of railway rates should be fully investigated with a view to reduce the rates for salt to the lowest possible figure. They held however that no development of Indian sources of supply was possible until prices in the Calcutta market were stabilised but that no stabilisation of prices was possible as long as the import of salt remained in private hands. They therefore held that the first step was for Government to introduce control of the import of salt into Bengal.

Advantages of control.—The control of imported salt would secure for the Indian manufacturer a fair price sufficient to give a reasonable return on investment where manufacture is carried out in reasonable lines. This price would be no higher than that at which salt may be expected to be obtained over a series of years and would be considerably below that which the consumer has had to pay on an average during the past five years. No burden will thereby be thrown on the consumer who will on the contrary be protected from exploitation by combinations of foreign manufacturers. By stabilising prices and standardising quality, speculation would be minimised and prices further reduced. Further by securing an additional source of supply Government might be in a position to make good shortages in Upper India which from time to time in the past have given rise to speculation and high prices in the markets normally served by the Rajputana works.

Agency of control.—The Board held that the Government would not be the best agency for the sale and distribution of imported salt. Distribution is alien to its functions and such intricate operations as the adjustment of prices in different localities and the administration of an equalisation fund to stabilise prices could not be safely entrusted to a Government Department. Were it to assume control of distribution it would be difficult to continue its present cost price policy, since to ensure stability of price profits should be built up by the sale of salt in certain areas at a cost price. For these and other reasons the Board suggested that Government should retain its present policy by selling its output to a marketing Board which would be free to adjust its prices so as to secure a more equitable distribution. This Board would be constituted as a public utility company, the rate of profit being limited. There would be permanent Government representation on the Board of Directors with a Government right of veto either general or in prescribed circumstances. The Board will be in charge of the import and sale of salt in the Calcutta market and of the sale of salt in Northern India. It would replace the present system of cost price ex works by a system of quotations for sale

at destination, the method adopted in all modern systems of distribution. It would follow from this that the Board would appoint its own agents in the main distributing centres. Although no attempt would be made to control retail sale in course of time it should be possible to stabilise prices at the principal distributing centres throughout the country. In purchasing its requirements, the Board would give preference to Indian salt of the required quality. Salt from Aden, Karachi and Okha would be purchased at the fair selling price fixed by the Tariff Board either *c.i.f.* or *f.o.b.* as the Marketing Board might decide. Salt from the Northern Indian sources would be purchased at Government cost price. Foreign salt would be purchased only to the extent to which the demand could not be supplied at the prices already indicated from Indian sources. Surplus profits would be funded and utilised either for stabilising or reducing the price of salt. Safeguards would have to be provided against profiteering or inefficiency on the part of the Marketing Board. The Tariff Board did not suggest that such a Board should be constituted immediately or if constituted, its machinery could be organised *ad hoc* after a lapse of considerable time. The full advantage of such control might not be realised for some years. In the meantime the Board was impressed by the fact that before such a Board could be constituted the salt works at Karachi, Okha and perhaps even the smaller works at Aden might be crushed out of existence by the pressure of foreign competition. They proposed therefore that as an interim measure, as much in the interests of the consumer as of the Indian industry that Government should assume control immediately of the import of salt into Bengal. Indian sea borne salt should be purchased at a fair selling price and efforts should be made to popularise the use of rail borne crushed salt from Khewra and Sambhar by the reduction of railway freights and if possible by the quotation of a lower rate for crushed than for uncrushed salt. The business of the requirements of the market should be purchased by Government from foreign manufacturers. Salt should be graded into two grades. A standard price for each of these should be fixed which in the first instance might be the average price of the last five years. After deducting the cost of administration any surplus profits should be funded in the purpose of stabilising the price of salt. This price should not be changed save at lengthy intervals. The present system of supply on indent should remain unchanged and no attempt should be made so long as control remains with Government to interfere with the existing system of distribution through wholesale and retail traders.

Decision of the Government of India.—In the Press Communiqué issued on the 13th of September 1930 Government stated that in order to follow up the suggestion in the Report that a full investigation should be made of the possibilities of the Northern India sources of salt supply they had decided to entrust the enquiry into the possibility of expanding existing sources of supply in India and the effect of such an expansion on price to Sir Chundil Mehta, K.C.S.I. and Mr. O. H. Pitt, the General Manager of the Northern India Salt Range.

Division. They further stated that before coming to a definite conclusion on the Tariff Board's proposals for the control of imported salt and for the marketing of salt in the North of India, they were anxious to have the benefit of public opinion on these and other aspects of the Report.

At the commencement of the session of the Legislative Assembly in January, 1931 the Report was referred to a Committee of 10 of its members. Shortly afterwards, the report of Sir Chunilal Mehta's Committee was received. That Committee held that the amount of salt that Northern India (Karachi, Khewra, Morvi, Okha and Pachbada) can produce within the next five years to displace foreign salt is 270 000 tons or 30 000 tons more than are actually required. This may subsequently increase to 550 000 tons and ultimately 635 000 tons. Prices should be established as the Tariff Board suggested for a period of at least 10 years. India even continental India taken by itself can be made independent of foreign salt but foreign salt cannot be eliminated for 3 or 4 years or possibly even more. After consideration of the Tariff Board's report and that of the Salt Survey Committee the Committee of the Assembly in a report which was presented to the Assembly on March 15th recommended the immediate imposition of an additional duty of 4½ annas per maund on all salt, Indian or foreign imported by sea into British India.

They also recommended that the Government should have power to increase this duty from time to time by amounts up to a total of 1 anna per maund if at any time the price of foreign imported salt should fall below its present level, the object being to adjust the price of such salt plus duty as nearly as possible to the level of the fair selling price as defined by the Tariff Board. A rebate equal to the additional duty should be granted on imported Indian salt on the producers undertaking to deliver a stipulated quantity of salt to the Government (or such smaller quantity as might be requisitioned) at any time at the fair selling price fixed by the Tariff Board. The Committee urged that in the meantime steps should be taken to explore and encourage the development of Indian sources of supply and to study the Tariff Board's final scheme for the establishment of a Marketing Board. The Committee suggested that the proceeds of the additional duty should not go to benefit the general Central revenues but should be earmarked for the development of certain sources of supply in India and any further measures that might be found necessary in the light of experience to secure the stabilisation of prices such as the establishment of a Marketing Board and the provision of working capital and reserves for such a Board. Subject to this, consideration should be given to the distribution of any balance between those Provinces that consume imported salt and would thereby be bearing the burden imposed by the extra duty.

The Gold Thread Industry.—Under the Finance Act of 1930 a duty of four annas an ounce was imposed on silver bullion and in order to maintain the advantage enjoyed by the Indian manufacturers using silver as a raw material under the revenue duty of 30 per cent

ad valorem on silver manufactures the latter duty was raised to 38 per cent. The increase in the duty on silver manufactures was, however, only imposed until March 31st 1931 subject to an undertaking that the question of extending protection to silver manufactures would be referred to the Tariff Board. In accordance with this undertaking the Tariff Board was directed to enquire into the question of extending protection to the manufacture in India of silver plate, silver thread and wire (including so-called gold thread and wire made mainly of silver, silver loaf and other silver manufactures).

The Board in their report dated August 8th 1930 made no recommendation in regard to silver plate and silver manufactures of all sorts not otherwise specified as they had received no application for protection from manufacturers in India. For real gold thread, lametta, manufactures from silver wire such as spirals, spangles, etc. and all colourable imitations the Board recommended an *ad valorem* duty of 50 per cent. They held that this duty should be levied for ten years on the ground that it would take at least this period before the Indian industry could reach the European standard of quality. They urged that special efforts should be made by the Provincial Industries Departments to enable the Indian industry to capture the South Indian market and added that the institution of a training centre or technical institute at the chief centres of manufacture would lead to satisfactory results.

Decision of the Government of India.—The recommendations of the Tariff Board as to the rate and period of the duty were accepted by the Government of India and embodied in a Bill which was passed by the Central Legislature in March 1931.

Galvanised sheets.—The question of increasing the duty leviable on galvanised iron and steel sheets, not fabricated was referred by the Government of India to the Tariff Board in September 1930 on an application from the Tata Iron and Steel Company, Ltd. The Board was asked to report whether galvanised sheets of British manufacture were being imported into India at such a price as was likely to render the protection afforded by the existing duty of Rs. 30 per ton ineffective. If so it was asked to consider in what form and for what period the additional protection required should be given. Its reply was that the fair selling price of galvanised sheets manufactured in India was Rs. 236 per ton whereas the landed duty free price of imported British sheet was Rs. 169 per ton so that protection was required for the Indian article to the extent of Rs. 67 per ton the difference between these two prices. It therefore recommended that the additional protection required should be given in the form of an additional duty of Rs. 37 per ton & c. a duty of Rs. 47 per ton in all. This duty to remain in force until March 31st, 1934. It was also asked to consider, if an increase in the duty on galvanised sheets was recommended what increase would be necessary in the duty on other articles made from galvanised sheet. Its recommendation was that the duty on imported iron or steel pipes and tubes and fittings therefor, if riveted or otherwise built up of

plates or sheets galvanized and also on imports of iron or steel sheets (including cuttings, discs and circles) under one eighth inch thick fabric at 1 galvanized should be increased from Rs. 53 per ton or 17 per cent *ad valorem* to Rs. 73 per ton or 17 per cent *ad valorem* whichever is higher. The Board further recommended that the higher duty they proposed should remain in force for the remainder of the period covered by the Steel Industry (Protection) Act of 1927 i.e. up to the 31st March 1934.

Decision of the Government of India— In a Resolution dated December 30th 1930 the Government of India accepted the recommendations of the Tariff Board in respect to the amount of the duty. They pointed out that the arguments for proceeding by way of bounty were stronger than the Tariff Board believed but that the existing financial condition precluded the adoption of that method. Even after the increase in the duty the price of galvanized sheet would be lower by Rs. 32 per ton than the fair selling price as determined by the Board in 1923. As regards the period of the duty, the Government of India held the view that the higher duty will be required until the 31st of March 1934, and add that it was not their intention to mitigate the duty and circumstances changed so radically as to make its retention clearly unnecessary and undesirable. They added that in the notification issued the duty was being increased for the period ending on the 31st March 1931 but that a Resolution would be placed before the Legislative Assembly in the coming session recommending its continuance beyond that date. A resolution on these lines was moved by the Hon. Mr. D. N. Mahtani in the Assembly on the 28th of January 1931 but after a usual lengthy discussion was amended to provide that the increased duty should be continued up to the 31st of March

1932 only and that before that date Government should make enquiries in order to ascertain whether a system of bounties might not be substituted wholly or in part for the increased duty. A Resolution in similar terms was adopted by the Council of State on the 25th February 1931.

Railway Materials made of Steel.—This question was referred by the Government of India to the Tariff Board in May 1930 on a representation from Messrs. Henry Williams (India) Limited stating that the manufacture in India of chrome steel points and crossings, bearing plates, fish bolts, rivets, bolts and nuts, dog spikes, stretcher bars and gibs and cutters was hampered by the fact that the import duties on the manufactured articles were lower than equal to or insufficiently above the protective duties level on the materials required for their manufacture and asking that the Tariff Board might be directed to inquire into the question whether higher duties should be imposed on all or any of the articles mentioned. The Tariff Board in a report dated the 17th of October 1930 recommended on grounds of tariff equality that the specific duty of Rs. 240 per cwt. should be imposed on fish bolts and nuts, ordinary bolts and nuts and dog spikes and of Rs. 2 per cwt. on rivets, gibs, cutters and keys. It also recommended that chrome steel switches and crossings should be brought under the protective tariff and that stretcher bars which form part of switches and crossings should be liable to the same duty as switches and crossings which are imported with the latter or separately.

Decision of the Government of India— The recommendations of the Tariff Board were accepted by the Government of India and embodied in a Bill which was passed by the Central Legislature in March 1931.

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries. But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials etc. are assessed at 3½ per cent and iron and steel railway material and ships at 10 per cent. High duties are imposed on tobacco, liquors and matches.

Re Imports.—Articles of foreign production on which import duty has been once paid if subsequently exported are on re import exempted from duty on the following conditions—

The Collector of Customs must be satisfied—

- (1) of the identity of the articles,
- (2) that no drawback of duty was paid on their export,
- (3) that the ownership has not changed between the time of re export and subsequent re import
- (4) that they are private personal property re-imported for personal use, not merchandise for sale
- (5) that not more than three years have passed since they were re-exported.

Duty is, however, charged on the cost of repairs done to the articles while abroad which should be declared by the person re importing the articles in a form which will be supplied to him at the time of re importation.

To facilitate identification on re importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks.—When any goods capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation are re exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven eighths of such duties shall, except as otherwise hereinafter provided be repaid as drawback.

Provided that, in every such case the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re export be made within two years from the date of importation, as shown by the records of the Customs House or within such extended

term as the Chief Customs Authority or Chief Customs Officer on sufficient cause being shown in any case determines provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods, having been charged with import duty at one Customs port and thence exported to another are re exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re exported from the former port.

Provided that, in every such case the goods be identified to the satisfaction of the Officer in Charge of the Customs House at the port of final exportation and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for ship duty.

Every person, or his duly authorised agent, claiming drawback on any goods duly exported, shall make and subscribe a declaration that such goods have been actually exported, and have not been re landed and are not intended to be re landed at any Customs port, and that such person was at the time of entry outwards and shipment, and continues to be, entitled to drawback thereon.

Merchandise Marks.—Imports into India especially from countries other than the United Kingdom, would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act, 1889, and connected Acts and the notifications issued there under. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offences may be classified conveniently under four heads—

- 1 Counterfeit trade marks,
- 2 Trade descriptions that are false in respect of the country of origin,
- 3 Trade descriptions that are false in other respects, and
- 4 Lengths not properly stamped on piece-goods.

Schedule II—(Import Tariff)

NOTE 1.—In the expression "*ad valorem*" used in these Schedules the reference is to "real value" as defined in Section 30 of the Sea Customs Act, 1878 (VIII of 1878) unless an article has a tariff value assigned to it.

NOTE 2.—Tariff valued heads are based on the ordinary trade description of each article and cover all reduced grades and mixtures unless they are separately provided for

96	MACHINERY namely such of the following articles as are not otherwise specified —			Free
	(1) prime-movers, boilers, locomotive engines and tenders for the same, portable engines (including power driven road rollers, fire engines and tractors) and other machines in which the prime-mover is not separable from the operative parts			
	(2) machines and sets of machines to be worked by electric steam, water, fire or other power, not being manual or animal labour or which before being brought into use require to be fixed with reference to other moving parts			
	(3) apparatus and appliances not to be operated by manual or animal labour which are designed for use in an industrial system as parts indispensable for its operation and have been given for that purpose some special shape or quality which would not be essential for their use for any other purpose			
	(4) control gear, self-acting or otherwise and transmission gear designed for use with any machinery above specified, including belting of all materials (other than cotton, hair and canvas ply) and driving chains but excluding driving ropes not made of cotton			
	(5) bare hand-drawn electrolytic copper wires and cables and other electrical wires and cables insulated or not and poles, troughs, conduits and insulators designed as parts of a transmission system and the fittings thereof			
	NOTE —The term industrial system used in sub-clause (3) means an installation designed to be employed directly in the performance of any process or series of processes necessary for the manufacture, production or extraction of any commodity

* Under Government of India Finance Department (Central Revenue) Notification No 19 dated the 17th May 1930 bagging for raw cotton made from jute rope weighing not less than 1 lb per square yard and having a total of not more than 250 warp and weft threads per square yard is liable to duty at Rs 5.80 per ton.

† Under Government of India Finance Department Notification No. 1428, dated the 17th November 1928 Jute Rays such as are used for papermaking, are exempt from payment of export duty provided that the Customs Collector is satisfied that they are useless for any purpose to which cloth or rope is ordinarily put.

§ Under Government of India, Finance Department (Central Revenue) Notification No 35 dated the 25th September 1928, hide and skin cuttings and fleasings such as are used for glue-making, are exempt from payment of export duty.

Finance

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. Those who take a broad view of the history of Federal States—and by whatever name it may be called India must in its political structure be a Federal State—nothing is more impressive than the ebb and flow in what may be called the adjustment of Federal and State rights. There is a constant mutation in the powers of the central government and the federal components though in India we use the terms Government of India and Provincial Governments to describe them. In the earliest days of British rule, the Provinces and especially the older Presidencies were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century, the process was reversed and the Government of India was all powerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found too heavy, in the days of his successors and a continuous process of devolution set in. In the matter of finance the measures took the form of long term contracts with the Provincial Governments and later in the assignment of definite heads of revenue to the Provincial Governments thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient, to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore each Province claiming that it paid an undue proportion of the total contribution and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion. Indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static like land revenue, or which are actually declining as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure like those on education and sanitation which bulk largely in Provincial budgets. The burden is heaviest in the industrial provinces such as Bombay and Bengal. The standard of living is high, wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules made to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement it is felt that this does not go far enough and there is still this pressure for some share in the revenues from the taxes on income which it is believed alone can put the industrial Provinces on a satisfactory basis. The question was remitted with others to the Parliamentary Commission which under the chairmanship of Sir John Simon is charged with the duty of inquiring into the working of the Indian constitution and making proposals for the future. In 1928 a financial expert Mr. Leyton was added to the Secretariat for this duty because all the evidence went to show that the adjustment of these differences was an integral part of the working of the constitutional machine.

Railway Finance—The year 1924-25 was marked by a step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (p. 9) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways. It is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial principles. Thus the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation usually called after the name of its chairman, the Acworth Committee, which recommended the entire

separation of the Railway Budget from the general finances. Some delay incurred in giving effect to this recommendation, but it was carried out in the year 1924-25. The basis of the settlement were complete separation of finance, a definite annual contribution from the railway revenues to the general revenues and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent on the capital

at charge plus one-fifth of the surplus profits further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs. 5 crores one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgeting and to give to the railways the benefit of their operation and security management and development on commercial principle.

I RECENT INDIAN FINANCE

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's finance sheet. Up to the outbreak of the war it was a record of very careful finance with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of windfalls going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. War was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it the effect of this attack was to set a large part of the North West Frontier afloat and to thrust on the Government of India a series of costly expeditions. When these were completed there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (a Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs. 100 crores. This led to two results.

Retrenchment and Taxation—Owing to the insistent demand for retrenchment the Government of India appointed in 1922 a retrenchment committee on the model of the Geddes Committee which overhauled the extra-

vagant post-war expenditure of the British Government. This committee is usually called after its chairman the Inchaupie Committee. It sat in 1923 and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs. 18 crores.

Financial equilibrium was established and a surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government (Imperial Revenue and Expenditure before the reforms) with the Revised Estimates for each year from 1915-16 to 1928-29.

	In thousands of Rupees		
	Revenue	Expenditure	Surplus (+) Deficit (-)
1915-16	80,00,000	81,79,000	-1,79,000
1916-17	84,11,100	87,31,375	-3,20,275

1927-28	1,27,20,000	1,27,20,000	0
1928-29	1,31,20,000	1,31,20,000	0

II THE PRESENT FINANCIAL POSITION

The year 1929-30 marked a considerable change in the finances of the Government of India, synchronising with a change in the control of this Department. When Sir Basil

Blackett took charge of the finances in 1922-23, the position was difficult. The war deficits had not been worked off and the provincial contributions hung like a millstone round the organs.

action. He was therefore driven to agree to the doubled salt duty which brought serious political troubles in its train. But thereafter the position improved. The next five years may be said to have been a period of comparative ease. Recurrent surpluses allowed the gradual extinction of the provincial contributions, the doubling of the salt tax was reversed and a period of constructive work set in. The main features of this period were a great improvement in the technique of the financial organisation and a great expansion in capital expenditure without any proportionate increase in the total debt. But this was accomplished only by drawing heavily on the balances of the Government, and postponing the payment of or not providing for the payment of, the interest on the Post Office Savings Certificates, which in India take the place of the National Savings Certificates in Great Britain. This was the position when Sir George Schuster, taking office as Finance Member, presented his first Budget in February 1929.

Actually the financial year 1928-29 closed with an uncovered deficit of Rs. 92 lakhs after the whole of the balance to the credit of the Revenue Reserve Fund had been drawn upon. Nevertheless the Finance Member was able to present another balanced Budget without increasing taxation and aided by a windfall the bringing into account of a large sum held by India at credit of the German Liquidation Account under the Treaty of Versailles the year 1928-30 closed with an even balance. By a curious coincidence the amount received by the Government of India as the result of the decisions arrived at by the Hague Conference was Rs. 156 lakhs and exactly balanced the deficit which would otherwise have arisen.

The Budget of 1930-31—From the foregoing it will be seen that the strain caused by the remission of provincial contributions was proving too much for the Government of India's finances. The Finance Member did not increase taxation in the 1929-30 Budget because he wished to see if the revenues would naturally increase sufficiently to bridge the gap. They did not and as we have already noted he would have found himself with a deficit of Rs. 156 lakhs had it not been for the Reparations windfall. But when he came to present the Budget for 1930-31 the unsatisfactory state of the country's revenues had to be squarely faced. In submitting the estimates for the year Sir George Schuster said he had to take into account several unfortunate factors menacing the civil disobedience campaign threatened by the All India Congress, the serious blow given to confidence by talk of repudiation of debts in the resolutions passed by the Congress at its Lahore session, and the not very bright prospects of world trade. Customs receipts showed a reduction exclusive of the Road Fund receipts of Rs. 109 lakhs and opium receipts a fall of Rs. 34 lakhs but increases were estimated to the extent of Rs. 70 lakhs from Income Tax and Rs. 70 lakhs from salt. The net result was that so far as the main heads of revenue were concerned, a net growth of no more than Rs. 5 lakhs was anticipated. On the other side of the shield the Finance Member said he had to provide for deterioration in the main Commercial Departments, Railways and Posts and Telegraphs

to the extent of Rs. 99 lakhs, essential new services and demands Rs. 148 lakhs, net addition to interest on deadweight debt Rs. 107 lakhs, special provision for bonus on Post Office cash certificates Rs. 68 lakhs, increase in provision for reduction of avoidance of debt Rs. 27 lakhs. Budget deficit of 1929-30 Rs. 90 lakhs, total Rs. 567 lakhs. Deducting Rs. 5 lakhs due to the net improvement in revenue there was thus a gap to be filled of Rs. 552 lakhs. The Finance Member proposed reductions in the civil estimates and in military expenditure amounting in all to Rs. 142 lakhs leaving a deficit of Rs. 410 lakhs.

New Taxation—To meet this deficit the following items of new taxation were announced—

1. Aise duty on kerosene raised from one anna to one anna six pies, import duty reduced from two annas six pies to two annas three pies. Estimated yield Rs. 3 lakhs.

Import duty on sugar raised by Rs. 1½ per cwt. Estimated yield Rs. 180 lakhs.

Duty of four annas per ounce on silver. Estimated yield Rs. 100 lakhs.

Duty on cotton piecegoods raised from 11 to 15 per cent with an additional duty of 5 per cent to be levied on non-British cotton goods for which a separate Tariff Bill would be introduced. Estimated yield Rs. 125 lakhs.

The total yield from the new taxes was estimated at Rs. 310 lakhs, but as it was proposed to reduce the import duty on rice by one-quarter, the Budget estimates anticipated a surplus of Rs. 70 lakhs. Justifying the demand for new taxation the Finance Member pointed out that certain heads of revenue were declining, notably that from opium which was to disappear entirely after 1934. New needs for expenditure on the other hand were constantly likely to press upon Government. Yet another consideration was that Government had, in his opinion, been working during the past three years with a dangerously low margin and in a country like India subject to great risks of loss of revenue from failure of crops or from floods it was desirable to have some margin of revenue over expenditure from which a reserve could be built up in reasonably good years.

Imperial Preferences—Expounding his Imperial Preference proposals on the new cotton duty the Finance Member said—We informed His Majesty's Government that it would not be right for us to ask the Assembly to commit themselves to Imperial Preference as a principle, but merely to adopt a particular course which in our judgment was consistent with India's interests at a critical juncture when much might depend on India's response to the British Government's appeal. We also stated that we should have to make it plain to the Assembly that while there were grounds for treating plain grey goods specially we could not in any circumstances agree for the emergency purpose which we had in view to an additional protection duty of 5 per cent on all classes of piece goods irrespective of country of origin since the immediate benefit to the Indian producer would be wholly incommensurate with the burden imposed on the Indian consumer. Finally, we

made it clear that in a matter of this kind after frankly stating our conclusions we should desire to put our carefully considered views before the Legislative Assembly with which the final decision must rest. That is how the matter stands and it is on this basis that our proposals are now put forward. I have thought it right frankly to put the position before Hon. Members in this way. Indeed whatever our proposals had been we could have consented to no other course for we felt that it is essential at this transitional stage of the constitution that there should be full confidence wherever possible between the Government and the Legislature. There are certain points with reference to what has passed between ourselves and the British Government and to the attitude which we adopted on which I desire to give a further explanation. We left in fact that this method of approach from the British Government had a special significance. It affords striking evidence that the fiscal autonomy convention has become an integral part of the constitution and that even when British interests are most profoundly affected by tariff changes including the intervention of the British Government is restricted to representation and appeal complete freedom was accorded to the Government of India to take the final decision in whatever manner they thought right for India. It appeared to us that subject to our paramount duty of considering Indian interests first no Government of India could ignore such an appeal for to any statesmanlike view it must be clear that India must be really interested in maintaining a spirit of co-operation with Great Britain. We felt moreover on every ground that no member of any Government of India be British or Indian would desire to introduce measures likely to inflict serious injury on British interests unless such measures were necessary for India's own development. It is of course, obvious that these proposals will evoke very considerable comment and will be subjected to the closest and most critical scrutiny.

Sales of Silver.—Dealing with the new silver duty, the Finance Member said:—The Government owing to their possession of surplus stocks of silver and the creation of the new refinery at Bombay have got into the position of being themselves important producers of silver. Our proposal therefore has the new incidental advantage of providing Government with a protected market for its own produce. Having said as much as this however, I must say more in order to avoid the creation of any misunderstanding. I feel that it is important that the masses of India who invest so large an amount of money in silver should realise that silver is only an ordinary commodity liable to fluctuations in price just as other commodities are. It has no sacred properties which make it immune from these vicissitudes and although the Government in taking these measures have in mind as one of the main advantages an improvement in the internal value of silver we should in the long run be doing a very poor service to the population of India if we allow it to be supposed that the Government have the power definitely to maintain prices at a particular level. It is far better that the people should generally appreciate the realities of the situation

in this respect. At the same time the Government do recognise the importance of the interests involved owing to the position of silver in India as in some respects a store of value and while they must as holders of a surplus commodity which they desire to sell reserve freedom of action I am prepared to assure the Assembly that in considering that direction the Government will not go to the market unless they are satisfied that as in the past the market will not be appreciably affected by their operations. If there is any danger of the world's production of silver exceeding the consuming capacity of all markets there of course there must be a tendency to falling prices. Only the combined action of producers and holders can prevent this. The Government of India holding as they do surplus stocks which in the public interest they consider that they ought to realise cannot fairly be asked to do more than other producers but I am prepared on behalf of the Government of India as important holders or producers to say that if the other interests concerned show any desire to consider the possibility of joint action for the regulating sales in order to meet the world's demand the Government of India would willingly co-operate further than this we cannot in the public interest go.

Expenditure for 1930-31.—On the expenditure side of the budget the Finance Member referred to the difficulty caused by the general demand for retrenchment on one side and on the other persistent and insistent pressure for increased expenditure on particular projects such as the improvement of conditions of service, education, hospitals and sanitary arrangements, agricultural endowment, police measures and roads. Government's demands for new expenditure were submitted after most careful scrutiny. In the first place there were the normal increments in the rates of pay for the existing staff of Government officials an inevitable commitment which had not yet approached anything like the peak figure. Apart from that there was a number of new demands of a special nature. These included Rs. 11 lakhs for the revenue operations, Rs. 10 lakhs for a special fund for financing measures for the encouragement of sugar cultivation, Rs. 7.1 lakhs for the Banking Inquiry and Rs. 24.5 lakhs for civil aviation.

WAYS AND MEANS

The ways and means position was explained as follows:—

	(In crores of rupees)
	Budget 1930-31
Expenditure	
Railway capital outlay (construction)	16.7
Purchase of Railways	
Other capital outlay	3.97
Provincial Transactions	7.93
Discharge of permanent debt (net)	18.84
Contraction against treasury bills	..
Contraction against silver	..
Other transactions	1.84
Total	49.2

	(In crores of rupees)
	Budget
	1930-31
Receipts	
Revenue surplus	70
Staple loan (net)	23 50
Working loan (net)	
Treasury bills with public	- 4 00
India Bills	
Post Office cash certificates and savings bank	6 20
Other unfunded debt	3 10
Appropriation for reduction, etc. of debt	5 00
Impreciation and Reserve Funds	5 27
Reduction of cash balances	8 62
Total	49 35

Reception by Assembly—The proposal to take the import duty on cotton piece goods consisted of two parts. The first was the raising of the import duty on all cotton goods from 11 to 15 per cent *ad valorem* for revenue purposes. This was effected in the Finance Bill by a change in the import tariff. To provide the special additional protection a separate Cotton Textile Industry (Protection) Bill was introduced by the Commerce Member. It provided for the imposition for protective purposes of an additional 5 per cent *ad valorem* import duty with a minimum of $\frac{1}{2}$ anna a pound on plied goods on all cotton piece goods from outside the United Kingdom. This protective duty to be in force for three years only and an undertaking to be given that its effects should be examined by the Tariff Board before the end of the Triennium. The differentiation in favour of Great Britain was adopted as a convenient

means of classification for the purpose in view which was to impose a protective duty on goods competing with Indian mill products and to leave alone goods not competing with them. To have imposed the new duty on all goods would have been to lay a heavy burden on the consumer without producing a particle of benefit for the Indian manufacturer. Political extremists vehemently opposed the protective differential duty because it nominally gave advantage to Great Britain and put forward an amendment to make it applicable to all imported piece goods. Government declined to make the change in their proposals on the ground that a general duty would impose a colossal further burden on the consumer without serving any useful purpose. Government on the other hand accepted an amendment from Moderate political parties abolishing the differentiation in so far as it affected plain grey goods in regard to which there was shown to be competition between British and Indian mills. This amendment the Assembly adopted by 62 votes to 42 in preference to the extremist amendment. The extremists finding themselves defeated left the House before the vote on the third reading of the Bill was taken and the motion that the Bill as amended be passed was therefore adopted *secundo*. The Bill was also passed by the Council of 49 etc.

The Assembly made only one substantial cut in the appropriation grants demanded by Government. That was the reduction of the grant required for the Army Department from Rs. 5,47,000 to one rupee. When the remaining grant for one rupee was submitted to the House the President declared that he heard none shout *aye* and that therefore that also was cut. The grant was restored by the Governor General. The annual Finance Bill was passed without serious amendment.

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus:—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the case. It agrees, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1809. It also obtains in certain districts of Madras.

Temporary Settlements

Elsewhere the system of Temporary Settlement is in operation. At intervals of thirty years more or less the land in a given district is subjected to a thorough economic survey on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition 1911):—He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become finally

binding, and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists.

The Two Tenures

Under the Temporary Settlement land tenures fall into two classes—tenant holdings and landlord holdings, or *Ryotwari* and *Zamindari* tenures. Broadly speaking the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct. In *Zamindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam *ryotwari* tenure is on an individual basis and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the rising period of settlement. Now the actual yield at the time of assessment alone is considered so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by unearned increment. The Government however may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 60 per cent of the rental in the case of *Zamindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge

varies greatly. About sixteen years ago the Government of India were invited in an influential signed memorial to fix one fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that under the existing practice the Government is already taking much less in revenue than it is now invited to exact, and the average rate is everywhere on the down grade. This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted—(1) In *Zemindari* tracts progressive moderation is the key note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess. (2) In the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords. (3) In *Ryotwari* tracts the policy of long term settlements is being extended and the proceedings in connection with new settlements simplified and cheapened. (4) local taxation (of land) as a whole is neither immoderate nor burdensome. (5) over-assessment is not as alleged, a general or widespread source of poverty and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue, when they occur to be imposed progressively and gradually, and not *per saltum*. (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people. (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords and also to give greater security to the latter in possession of their holdings. The Oudh Tenants' Act of 1886 placed important checks on enhancement of rent and eviction and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land to

interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above), 'so far from being generously treated by the *Zemindars* the Bengal cultivator was rack rented, impoverished, and oppressed.'

Government and Cultivator

While the Government thus interferes between landlord and tenant in the interests of the latter its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12 it is stated—'The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extension of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual whereas under a *Zemindari* or kindred system the State would have gained nothing however much cultivation had extended throughout the whole of 80 years' lease. On the other hand the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All India accounts. It may be taken roughly at £28 million as compared with £84 million said to have been raised annually by Aurangzeb from a much smaller Empire.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information—Land Revenue Policy of the Indian Government, 1902 (Superintendent of Government Printing), Baden Powell's Land Systems of British India, Sir John Strachey's India, its Administration and Progress, 1911 (Macmillan & Co.) M. Joseph Chailley's Administrative Problems of British India (Macmillan & Co. 1910) and the Annual Administration Reports of the respective Provincial Governments.

EXCISE

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a commonplace amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit, fermented palm juice, beer made from grain, country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirits is the main source of revenue except in the Madras Presidency and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowa flower molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system against these people had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries thus enabling Government to perfect its control by narrowing the limits of supervision and to regularize its taxation by imposing a direct still head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision improved distribution and vend arrangements.

Various Systems

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still head duty. Briefly

stated the stages of development have been—first farms of large tracts. Second farms of smaller areas. Third farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area. Fourth farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the key note lying in attempts where it has not been possible to work with the fixed duty system in its simplest forms to combine the securing and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free supply system or the District Monopoly system. The Free supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District Monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

The recommendations of the Indian Excise Committee of 1907-08 resulted in numerous reforms in British India one of them being that the various systems have been or are gradually being superseded by the Contract Distillery system under which the manufacture of spirit for supply to a district is disposed of by tender the rate of still head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations and the conditions of manufacture, vend, storage and transport an improvement in the quality of the spirit an improved system of disposal of vend licences reductions and re-distributions of shops under the guidance and control of local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Since the issue of the report of the Excise Committee 1907-08, no less than 213,000 square miles of territory were transferred from the out-still to the distillery system. In 1905-06 39 per cent of the total excise area and 28 per cent of the population of that area were served by out-stills the proportions in 1912-13 were only 15 and 8 per cent respectively.

Excise has now been made over entirely to the Provincial Governments and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1920-21. From that consumption reduced to proof gallons 10 per cent. is deducted in the case of shops in Bombay City and 5 per cent. elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management thus partially superseding the Contract Distilling system.

Sap of the date, palmyra, and coconut palms called toddy is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskeys, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption. The uniform fee of 8 annas per gallon is levied all over India at the time of issue.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (q v). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs—The narcotic products of the hemp plant consumed in India fall under three main categories namely ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an

active drug when collected separately and blang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1923.

Opium—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills, but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments. The system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent. annually in each subsequent year until exports are totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT

The salt revenue was inherited by the British Government from Native rule together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply, rock salt from the Salt Range and Kohat Mines in the Punjab, brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 15 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Barasara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into

the Bay of Bengal render the manufacture of sea salt difficult and the bulk of the supply both for Bengal and Barma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly one half of the indigenous salt is manufactured by Government Agency, and the remainder under license and excise systems in the Punjab and Rajputana, the salt manufacturing factories are under the control of the Northern India Salt Department a branch of the Commerce and Industry Department in Madras and Bombay the manufacturing are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Daman on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903 it was reduced to Rs. 2 in 1905 to Rs. 1-8-0, in 1907 to Rs. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption the figures rising by 25 per cent between 1903-1908. In 1933 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Rs. 1-4-0. The estimated salt revenue in 1929-30 is Rs. 674,64,000.

CUSTOMS

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent, in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent duties were reimposed, yarns and cotton fabrics being excluded. Continued financial stringency brought piece goods within the scope of the tariff and after various expedients the demands of Lancashire were satisfied by a general duty of 3½ per cent on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1916-17 in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent to 4d an ounce, and higher duties levied on petroleum, tobacco, wines, spirits, and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely revised in the Budget of 1916-17 in order to provide additional revenue to meet the financial distress caused by the war. The general import tariff which had been at the rate of 5 per cent *ad valorem* since was raised to 7½ per cent

ad valorem, except in the case of sugar, as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal article of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twines and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have been glad to see the tariff raised to 5 per cent, without any corresponding alteration of the excise but were overruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Rs. 1-8-0 per 100 lbs. In the case of jute the export duty on raw jute was fixed at Rs. 2-4-0 per bale of 400 lbs., approximately equivalent to an *ad valorem* duty of 5 per cent. Manufactured jute was charged at the rate of Rs. 10 per ton on sacking and Rs. 16 per ton on Hessians.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs. 2-4-0 per bale of 400 lbs. in the case of raw jute and Rs. 10 per ton on sackings and Rs. 16 per ton on Hessians. These rates were doubled with a view to obtaining an additional revenue of 2,00,000. The import duty on cotton goods was raised from 3½ per cent to 7½ per cent without any alteration in the basis which remained at 3½ per cent. This change was

expected to produce an additional revenue of £1,000,000. The question of the Excise was left untouched for the reason, amongst others, that the Government could not possibly forego the revenue of £320,000 which it was expected to produce. With these changes in operation the revenue from Customs in 1920-21 was Rs 32,37,29,000.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for this big deficit which had then to be faced. The general *ad valorem* duty was raised from 7½ to 11 per cent, a special duty was levied on matches of 12 annas per gross boxes in place of the existing *ad valorem* duty of 7½ per cent, the duties on imported liquors was raised to 5 annas per degree of proof per gallon, the *ad valorem* duty of 7½ per cent was raised to 20 per cent in the case of certain articles of luxury, the import duty on foreign sugar was increased from 10 to 15 per cent and the duty on manufactured tobacco was raised by 50 per cent. The Customs duties were further increased in the Budget of 1922-23. The Government proposals in this direction have been described in an early passage. They were to raise the general customs duty from 11 to 15 per cent, the cotton excise duty from ¾ per cent to 7½ per cent, the duty on sugar from 15 to 25 per cent, a duty of 5 per cent on imported yarn, a rising duty on machinery, iron steel and railway material from 2½ per cent to 10 per cent together with the general duty on articles of

luxury from 20 per cent to 30 per cent. In the course of the passage of the Budget through the Legislature the cotton excise duty was retained at ¾ per cent, the duty on machinery was retained at ¾ per cent, and the duty on cotton piece-goods at 1½ per cent, the other increases being accepted. In 1925 the Cotton Excise duties were finally abolished. Full details with regard to the customs duty are set out in the section on Indian Customs Tariff (q. 9). The estimated revenue from the customs in 1929-30 is Rs 51,21,77,000.

The Senior Collectors were Covenanted Civil Servants specially chosen for this duty before the introduction of the Imperial Customs Service in 1938. Since that date of the five Localships at the principal ports (Calcutta, Bombay, Madras, Rangoon and Karachi) there are ordinarily recruited 10 Members of the I.C.S. (4 Covenanted Civil Servants). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—10 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The subordinate staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in India in 1880, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent or a little more than 9d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system and the present schedule was consolidated in the Act of 1936. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pias in the rupee, or about 6d. in the pound, on incomes between 500 and

2,000 rupees at the rate of four pias in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Budget of 1931-32 when the scale was fixed as follows—

(RATES OF INCOME TAX)

Rs		Rate	
2 000 to Rs	5 000	0 pias in the rupee	
5 000 to	10 000	0	" "
10 000 to	15 000	12	" " "
15 000 to	20 000	15 to 18	" " "
20 000 to	30 000	18 to 19	" " "
30 000 to	40 000	21 to 22	" " "
40 000 to	1 00 000	25	" " "
1 00 000 and above		26	" " "

RATES OF SUPER-TAX

In respect of the excess over thirty thousand rupees of total income.—Rate

- (1) In the case of every company One anna in the rupee
- (2) (a) In the case of every Hindu undivided family—
- (i) In respect of the first twenty five thousand rupees of the excess *Nil*
- (ii) for every rupee of the next twenty five thousand rupees of such excess One anna in the rupee
- (b) In the case of every individual and every unregistered firm, for every rupee of the first fifty thousand rupees of such excess One anna in the rupee
- (c) In the case of every individual, every unregistered firm and every Hindu undivided family—
- (i) for every rupee of the second fifty thousand rupees of such excess One anna and a half anna in the rupee
- (ii) for every rupee of the next fifty thousand rupees of such excess Two annas in the rupee
- (iii) for every rupee of the next fifty thousand rupees of such excess Two and a half annas in the rupee
- (iv) for every rupee of the next fifty thousand rupees of such excess Three annas in the rupee
- (v) for every rupee of the next fifty thousand rupees of such excess Three and a half annas in the rupee
- (vi) for every rupee of the next fifty thousand rupees of such excess Four annas in the rupee
- (vii) for every rupee of the next fifty thousand rupees of such excess Four and a half annas in the rupee
- (viii) for every rupee of the next fifty thousand rupees of such excess Five annas in the rupee
- (ix) for every rupee of the next fifty thousand rupees of such excess Five and a half annas in the rupee
- (x) for every rupee of the remainder of the excess Six annas in the rupee

The head of the Income-Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor General in Council. The rest of the income tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is under section 5 (4) subject to the control of the Governor General in Council, but the Governor General in Council exercises this control through the local Government. The estimated yield of Income-tax in 1929-30 was Rs. 16 69 00 000.

HISTORY OF THE COINAGE

The Indian mints were closed to the un restricted coinage of silver for the public from the 20th June 1893 and Act VIII of 1893 passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees, but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency

Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years and it was decided that of the coinage profits devoted to this fund six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only

one half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways. The Gold Standard Reserve was called into action before the year 1907-08 was out. Exchange turned against India, and in March 1908 the Government of India offered bills on the Secretary of State up to half a million sterling, while the Secretary of State sold £1,000,000 Consols in order to meet such demands. During April to August further sterling bills were sold for a total amount of £8,958,000. On a representation by the Government of India, the Secretary of State agreed to defer the application of coinage profits to railway construction until the sterling assets of the Gold Standard Reserve amounted to £25,000,000. On the outbreak of the war in August 1914 the Reserve was drawn upon to meet the demands for sterling remittances and Government offer to sell £1,000,000 of Bills weekly.

Gold

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1913 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1913 establishing a branch of the Royal Mint at Bombay. It stated—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or other use and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,708 pieces of these new coins of the nominal value of Rs 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918 and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and sixpence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pence per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or at the option of Government sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and fivepence forty-nine

sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of gold by the chlorure process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold. The Refinery turned out 18,62,488 fine tolas of refined gold in 1920-21.

Silver

The weight and fineness of the silver coins are—

	FINE SILVER grains	ALLOY grains	TOTAL grains
Rupee	185	15	180
Half rupee	82½	7½	90
Quarter rupee or 4-anna piece	41½	3½	45
Eighth of a rupee or 2-anna piece	20½	1½	22½

One rupee = 185 grains of fine silver
One shilling = 80½ grains of fine silver
One rupee = shillings 2 0430

Copper and Bronze

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1855 and into the Madras and Bombay Presidencies by Act XVII of 1844.

The weight of the copper coins struck under Act XVII of 1870 remained the same as it was in 1845. It was as follows—

	Grains troy
Double piece or half anna	200
Piece or quarter anna	100
Half piece or one-eighth of an anna	50
Piece being one-third of a piece or one-twelfth of an anna	33½

The weight and dimensions of bronze coins are as follows—

	Standard weight in grains troy	Diameter in millimetres.
Piece	75	20.4
Half piece	37½	21.15
Pie	25	17.45

Nickel

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a wavy edge with twelve scallops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18, and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1893, was forced to the front in 1920, as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so

much importance, and they continue to bulk so largely in all Indian economic questions that we propose to give here a short summary of the Indian currency system in non-technical language.

I. THE SILVER STANDARD

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily rose in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payments for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step was intended to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused and no one else had the power to coin rupees as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1895 it had approached the figure of one shilling and fourpence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These rupees having been obtained a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four pence or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India, that the Indian mints should be thrown open to the unrestricted coinage of gold, so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India at the rate of fifteen rupees to the sovereign it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately eleven pence halfpenny, and they were sold to the public at

one and fourpence, the profits were considerable. They were to have been kept in gold so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India proposed to accept all the recommendations of the Fowler Committee actually only a portion of them was put in practice. The official rate of exchange was fixed at one and four pence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented

in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt or even from Australia than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance—This system worked until 1907-08. A partial failure of the rains in India in 1907 and the general financial stringency all over the world which followed the American financial crisis in the autumn caused the Indian exchange to become weak in November. This was one of the occasions contemplated in a different form by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a

liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up, meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough, there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty three thirty seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty nine thirty seconds, representing gold export point and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London. It was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation, some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a limping standard.

III THE CHAMBERLAIN COMMITTEE

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mint, others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India, at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure, at the transfer of a solid block of the Paper Currency Reserve from India to London, at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees, and at the unlimited sale of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the require-

ments of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done. It was contended, on the other side of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times* and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co. instead of through their recognised and constituted agents the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Anson Chamberlain. This is known as the Chamberlain Committee.

New Measures—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency, that it was not to the advantage of India to encourage the internal use of gold as currency, that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling, that no limit should be fixed to the amount of the Gold Standard Reserve one half of which should be held in gold, that the silver branch of the Gold Standard Reserve should be abolished, that Reserve Councils should be sold on demand, that the Paper Currency should be made more elastic, and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Com-

mittee dealt inconclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being not guilty but do not do it again. They gave a passing commendation to the idea of a State Bank. Sir James Beggie the only Indian banker on the Committee, appended a vigorous minute of dissent in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when in excess to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV CURRENCY AND THE WAR

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the tampering recommendations of the Commission the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reserve Councils, £8,707,000 being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Bank, and a net sum of Rs 8 crores was taken away. There was some lack of confidence in the Note issue and a demand for gold. Notes to the extent of Rs 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium. Confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries, a heavy expenditure in India on behalf of the British Government, and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was \$8 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1911 was 27½ pence per standard ounce. In May 1919 it was 38 pence on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the provision of the rupee from falling below the ratio of 1 to one but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence.—

Date of Introduction	Minimum Rate for Immediate Telegraphic Transfers
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
13th May 1919	1 8
12th August 1919	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

V. THE 1919 COMMITTEE.

The effect of these measures however was to fetter the currency policy pursued from 1892 to 1915, the main object of which was to stabilize the rupee at one and fourpence. The war having over a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below—

(1) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(14) The reduction of the fineness or weight of the rupee, the issue of 2 or 3 rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee are expedients that cannot be recommended.

(15) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(16) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(17) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(18) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(19) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(20) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(21) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(22) The stable relation to be established between the rupee and gold should be at the rate of Rs 10 to one sovereign, or, in other words at the rate of one rupee for 11.30 016 grains of fine gold, both for foreign exchange and for internal circulation.

(23) If silver rises for more than a brief period above the parity of Rs (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills, (b) abstention from purchase of silver, (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(24) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands, but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reserve Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(25) The import and export of gold to and from India should be free from Government control.

(26) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent of the gross circulation.

As regards the fiduciary portion of the reserve the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities with not more than one year's maturity issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at Rs to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(27) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report—The main object of the Committee it will be seen, was to secure a stable rate of exchange without impairing the convertibility of the Note issue and without debasing the standard silver rupee in India or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coinage purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold, all other recommendations are subsidiary thereto. But in this they were not unanimous: an important member of the Committee, Mr Dadiba Dalal, of Bombay appended a minority report in which he urged the adoption of the following course:—

(a) The money standard in India should remain unaltered, that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(d) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation

(A) Reverse drafts on London to be sold only at 1s 32d-32d The proceeds of Reverse drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s 4 3/4d per rupee

VI. THE TWO SHILLING RUPEE

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling, that it should be linked at the rate of two shillings instead of the standard value, one and fourpence all other recommendations were ancillary to this But it is very important to bear in mind the twofold problem which confronted the Committee It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupees in India For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold

The Report Adopted.—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade That may be summarised in a sentence A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy

Financial Confusion.—This result was produced by many causes It has been explained above that the essential features of the Indian currency system are the free issue of Council Bills as gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India as gold export point to prevent exchange from falling below the official standard Now when the

Currency Report was signed the Indian exchange was practically at two shillings gold But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchange, as measured in dollars, the dollar-sterling rate inasmuch as America was the only free gold market being the dominating factor in the situation Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued The Indian exchanges were two shillings and fourpence, and weak at that, the gold rate was about two shillings ninepence There was an immediate and prodigious demand for Reverse Councils to take advantage of this high rate of exchange the market rate jumped up to two shillings eightpence

Effect of the Rise.—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report, it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse

Now when the official notification of the two shilling rupee was made the Indian export trade was weak The great consuming markets of Great Britain and America were glutted with Indian produce The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat On the other hand, the import trade was strong Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers These began to come forward

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act The weak export trade was almost killed At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled an important place Afterwards other forces intervened which accentuated the difficulties of the situation There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure.—Government stringed long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling dollar exchange which at one time took the rate for Reverse Councils to two shillings tenpence half penny. They sold two millions of Reverse Councils a week then five millions then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate which on some occasions was several pence induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always two pence or three pence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate, it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one, due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent of the Note issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If left alone, the natural fall in exchange would have tended to correct the adverse balance of trade; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand. Importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reserve Councils before abandoning

their effort to stabilise exchange at the new ratio. The loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs. 35 crores of rupees. Government sold £55 millions of gold without breaking or seriously affecting the premium on gold. The Secretary of State in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and not off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII COMMISSION OF 1925-26

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quackery having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone to find its natural level followed. Left alone Exchange established itself round about the old ratio of fifteen to one that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs. 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable. Instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman with Sir Henry Saksasch as the chief gold expert. The personnel of the Committee was strongly criticised in India on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative, a resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms and they are textually reproduced in order that they may be above question—

(i) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold but gold should not circulate as money.

(ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(iii) The Central Banking functions should be entrusted to a new organisation referred to as the Reserve Bank.

(iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(vi) Subject to the payment of limited dividends and the building up of suitable reserve funds the balance of the profits of the Reserve Bank should be paid over to the Government.

(vii) The Bank should be given the sole right of note issue for a period of (say) 2½ years. Not later than five years from the date of the charter becoming operative Government notes should cease to be legal tender except at Government Treasuries.

(viii) The notes of the Bank should be full legal tender and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor General in Council. A suggestion is made as to the form of the note.

(w) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces no limitation being imposed as to the purpose for which the gold is required

(x) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non monetary purposes. The method by which this may be secured is suggested.

(xi) The legal tender quality of the sovereign and the half-sovereign should be removed

(xii) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder

(xiii) The paper currency should cease to be convertible by law into silver coin. It should however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency and of the Government to supply coin to the Bank on demand

(xiv) One-rupee notes should be reintroduced and should be full legal tender

(xv) Notes other than the one rupee note should be legally convertible into legal tender money, i.e. into notes of smaller denomination or silver rupees at the option of the currency authority

(xvi) No change should be made in the legal tender character of the silver rupee.

(xvii) The Paper Currency and Gold Standard Reserves should be amalgamated and the proportions and composition of the combined Reserve should be fixed by statute

(xviii) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent of the Reserve subject to a possible temporary reduction with the consent of Government on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one half should be held in India.

(xix) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years

(xx) The balances of the Reserve should be held in self liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(xxi) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability and the balance of profit or loss shall accrue to or be borne by the Government revenues

(xxii) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department

(xxiii) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working

(xxiv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India

(xxv) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India) as well as the banking reserves in India of all banks operating in India should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly

(xxvi) The transfer of Reserve assets should take place not later than 1st January 1929 and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931

(xxvii) During the transition period the currency authority (i.e., the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form of which the outline is suggested

(xxviii) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.

(xxix) The stamp duty on bills of exchange and cheques should be abolished. Bill forms in the English language and the vernacular in parallel, should be on sale at post offices

(xxx) Measures should be taken to promote the development of banking in India

(xxxi) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent—Whilst all the members of the Commission signed the report, one of their number Sir Purshottamdas Thakordas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshottamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that through out the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency and that their efforts were enunciated by successive Secretaries of State who had in view something which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purnabotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio

Dealing with the ratio of the rupee to gold Sir Purnabotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years namely one and fourpence. His conclusions were summarised in the following terms—

‘I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold which I have emphasised, is recognised and steps taken to ensure it, the gold bullion standard proposed will be the correct one and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s 6d is accepted and acted upon India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be ruin to their cost, and affect not only their stability and their progress but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had during the period of forced adjustment to a rate of 1s 6d, the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete

the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended.’

A Survey.—The official summary of the Report, and the summary of the minutes of dissent, given above do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked

‘What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abraham, who described it as a limping standard. The Royal Commission declares that ‘it is truth in so far as it amounted to a definite standard at all. It was a standard of sterling exchange.’ Later they show that the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency. Under the Indian system contraction is not, and never has been automatic.

‘However the standard limped along until the third year of the war. The exchange value of the rupee was stable, prices adjusted themselves to the ratio. Indian trade and industry developed. From the narrow standpoint of profit and loss the investment of the reserves instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at \$17,962,466. But it had three great disadvantages. It did not inspire public confidence. It placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it, and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment when allowance has been made for all misunderstandings and misapprehensions the fact remains that a large measure of distrust in the present system is justified by its imperfections.

There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and four pence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note issue. Wisely, it took the former alternative, the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Barington Smith Committee to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event but if the Government had followed silver down as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent ratio' with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September 1920, and the two shilling rupee has since been a legal fiction. Left free from administrative action the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, 'The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency and those acts are subject to no statutory regulation or control.'

The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India to link the rupee to that standard, and to provide for its statutory control, automatic working and stability to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department but it is known to be the work of the Finance Member, Sir Basil Blackett whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 or bars, as soon as sufficient gold was available to put a gold coin in circulation after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the

disposal of 200 crores of silver rupees, or 685 million fine ounces in ten years, the acquisition in all of £103 millions of gold, and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1.12 crore.

This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices throughout the world. The reaction on the silver market from the dethronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China where India still does a large business. Moreover, the capacity to raise the required credits is doubtful and the cost is placed by the India Office at Rs 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also that whilst London working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency ills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever." In breaking adrift from any idea of a sterling exchange or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity for safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India but of all interested in Indian trade. India will have nothing to do with any exchange standard its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversy as it is desired to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded. It involves the demonetisation of the sovereign to which a sentimental influence attaches. But whilst it does not do these things it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point the proposals leave India perfectly free to decide, through her legislature where a gold currency is worth the expense.

We must, however face the obligation which a gold bullion standard imposes on the currency authority in India. Indeed the Commission do not attempt to burke it. 'The obligation is to convert the currency not merely into foreign exchange but into metallic gold, and it is an obligation that is not as formerly conditional and circumscribed but absolute and unlimited. Nevertheless, it has been undertaken by every other country that has adopted an effective gold standard and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification and at the time, which we specify. It is important therefore to examine the reserves and the procedure thereanent.

The reserves held for the purpose of maintaining the value of the token currency are twofold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30 1926 (the date taken by the Commission) was as follows—

Paper Currency Reserve	
	Rs Crores
Silver coin	77 0
Silver bullion	7 7
Gold coin and bullion	22 8
Rupee securities	57 1
Sterling securities	21 0
	<hr/> 186 1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee)

The Gold Standard Reserve amounts at present to £40,000,000 invested in British Treasury Bills and other sterling securities.

In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute, that gold and gold securities should form not less than 40 per cent. of the whole, with 50 to 60 per cent. as the ideal and that the holding of gold, which now stands at about 12.8 per cent., should be raised to 20 per cent. as soon as possible and to 25 per cent. in ten years. Generally they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is wise. An arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—The majority of the Commission Sir Purushotamdas Thakordas being the only dissentient, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated. It is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence. The Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August, 1917.

One principle advanced in Sir Dadiba Dada's prophetic minority report in 1912, that the legal standard of money payments should be, and usually is regarded as less open to repeal or modification than any other legislative Act will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible, which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell. The attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade, after it was abandoned in September, 1920, the rupee fell below one shilling and sixpence sterling and one shilling gold. Thereafter under the influence of a succession of abundant harvests it recovered. In 1923 it was one shilling and fourpence sterling, in October, 1924 one and sixpence sterling and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920 or if advantage had been taken of its return to one and four the permanent standard might have been re-established without undue disturbance. Sir Purnohamdas Thakordas asserts in his minute of dissent that "the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us the issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India, as it is a violent controversy will rage round this secondary issue obscuring the great merit of the Commission's basic recommendation—a true gold standard, statutory in its composition and automatic in action, with the co-operation of the currency and credit authorities. However, we have to deal with *facts* as we find them. The majority of the commission base their recommendation on the "conviction, which has been formed and cumulatively reinforced during the progress of our inquiry that at the present exchange rate of about one shilling and sixpence prices in India have already attained a substantial measure of adjustment with those in the world at large, and, as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage." Sir Purnohamdas Thakordas in a closely reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence no rate could be operative for over a year without

inducing this result. But it is clear that the adjustments especially in regard to wages in Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

Here it seems to me, the decisive factor is the economic consequences of a return to one shilling and fourpence. There is no half way house: the rate must be either the *de facto* one of one and sixpence or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent with a consequent reduction of real wages by that proportion there would be convulsive disturbances of the foreign trade there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been overvalued in the past, it is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six: the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Currency Authority—A feature in the Indian currency system little appreciated in Great Britain is the predominance of the Government. The Commission lay special stress on the disabilities this entails. India is perhaps the only country among the great trading countries of the world, in which the Government exercises direct control over currency in general and over the note issue in particular. The banking and currency reserves of the country are thus separated. The Government controls the currency. The credit situation is controlled as far as it is controlled at all, by the Imperial Bank.

A volume might be written on this subject and on the controversy the prejudice and political harm which it involved. However, there is no useful purpose to be served by raking amongst these ashes though the curious will find much food for thought in the historical retrospect, drawn entirely from official sources, which forms the first part of Sir Purnohamdas Thakordas's minute of dissent. The Commission propose to establish harmony between these hitherto diverse interests—though there has been a close working arrangement between the Government and the Imperial Bank of recent years, and the Government has developed the note issue with skill and enterprise—by the establishment of a new Reserve Bank. A detailed scheme for the constitution and working of the Bank, undertaken to be the handiwork of Sir Henry Strakosck, is embodied in the Report. The Reserve Bank, with a capital of five crores of rupees, is to have the sole right

of the Note Issue the responsibility for maintaining the stability of the currency, the custody of the cash balances of the Government and the duty of carrying through its remittances, it is to act generally as a bank of the banks, and its principal function will be to re-discount bankable bills held by the commercial banks. Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits is to be paid over to the Government. In return for making over the note issue and the reserves, the Government is to nominate the managing-governor and deputy managing-governor, and three members of the Board—five members from a Board of fourteen. In order to free the Bank from political pressure, the Commission think it desirable to provide that no person shall be appointed President or Vice-President of a Local Board or shall be nominated as a member of the Central Board, if he is a member of any of the legislatures.

The main principle underlying this recommendation is not open to question. It is of paramount importance to remove the Indian currency system from official management and to link the control of currency with the control of credit. This involves the establishment of a Central Bank. But it is not the complete essential far from it.

India is sometimes spoken of as the sink for the precious metals. So long as she chiefly absorbed silver the West looked on with benevolent approval now she is turning to gold the attitude is different. Indian capital is sometimes described as inadequate and timid. But critics do not realise that the banking organisation of the country is so hopelessly inadequate that hundreds of millions of people have no secure refuge for their store of value other than gold and silver bullion in their own possession. The Exchange Bank cling to the seaports. The indigenous banks follow their example. The Imperial Bank is the only organisation which can carry reliable credit facilities into the mofussil. The old Presidency Banks were lamentably slow in exercising this responsibility. The pace has been quickened and as the price of the free use of the Government balances the Imperial Bank was called upon to open a hundred new branches. The total number of its branches is yet only a hundred and sixty four, and it was stated by a competent banking authority in evidence before the Commission that India needed at least five thousand.

This extension of banking facilities is of transcendental importance. In an address to the University of Delhi last year Sir Basil Blackett committed himself to a remarkable statement: "To some it may sound fantastic in view of this historic habit—reliance on external capital—to talk of India's not supplying the whole of her own capital requirements but also becoming a lender of capital for the development of other countries. Yet I believe firmly that, given the necessary development of banking and credit facilities and goodwill and readiness to profit by the counsel and assistance of European businessmen, the time is not very far distant when India will be doing both these things. India would seem by nature to be destined to be a creditor country if only her people will it so.

But Indian resources will not be mobilised without the vehement development of branch banks.

As matters stand this work can only be done by the Imperial Bank, and though it is moving it is with desperate slowness. There are one or two features common to most of the hundred new branches it has opened. They attract deposits they facilitate the investment habit; but they do not pay. To many who are in close touch with Indian conditions it seems that any measure which would weaken the capacity of the Imperial Bank to prosecute this unremunerative but imperatively necessary work by the diversion of the Government balances to the Indian Reserve Bank, or the division of these balances between the two banks, would be a retrograde measure. There are other considerations. The amount of re-discounting to be done in India is not large, as the Exchange Bank, which finances the export trade, re-discounts in London, which is always likely to be the cheaper market. The number of men in India qualified to act on the directorate of banks is small. Are there enough to constitute the reliable directorates for two great banking institutions? The Commission rather gloom over these difficulties. They think that the Reserve Bank will be able to spare for the Imperial Bank sufficient funds from the Government balances to enable it to prosecute the work of opening new branches; also that a bill market will rapidly develop. But their arguments wear an aspect of special pleading. However, the issue can be put in a nutshell. India must have a Central Bank. It is found impossible to develop, even as a temporary measure, the Imperial Bank into a Central Bank, then there must be a Reserve Bank on the lines sketched in the Report. But if a new Reserve Bank is established it is essential that provision shall be made for the Imperial Bank to enjoy the free use of a sufficient share of the Government balances to enable it vigorously to develop banking facilities in the mofussil and this obligation should be made compulsory.

The Note Issue—Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency the actual currency of India is a token, the silver rupee and another token, the note convertible into rupees. Ever since the breakaway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coining which followed recovery from the famine of 1899/1900. It compelled heavy purchases of silver which invariably rose in prices as the Government came into the market, and it placed the Indian currency system as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48s. an ounce. The removal of this anomalous provision, the Commission say is an essential step in Indian currency reform which must be taken sooner or later. No opportunity for the termination of this obligatory convertibility is likely to be so favourable as the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached

to them than they have ever had since silver ceased to be a reliable standard of value." Both propositions can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself, it was always convertible on demand, but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small denomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them. There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one rupee note, which had acquired great popularity before it was discontinued on the ground of economy shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money either notes of smaller denominations or silver rupees at its option, but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surfeit of rupees the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central

Bank with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1925 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect—

"After considering the report of the Royal Commission on Indian Currency and Finance the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The new Ratio.—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling fivepence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate, but the proposal to establish a Reserve Bank for the control of Currency has not matured owing to differences between the Government and the Legislature as to the exact form of the Bank. Meantime the gold resources of the Government of India have been strengthened, as will be seen when we come to consider the Reserve.

The character of the Reserves which are the backbone of the Indian currency system are shown below—

(Composition of the Currency Reserves held against the note circulation at the end of each month (in lakhs of rupees))

MONTH	COIN AND BULLION RESERVE						SECURITIES					
	Gross circulation of notes	Silver coin in India	Gold bullion in India	Silver bullion in India	Gold bullion in England	Silver bullion in England	Gold bullion in His Majesty's Dominions	Silver bullion in transit between India and England and His Majesty's Dominions	Silver bullion in transit between India and England and His Majesty's Dominions	Sterling securities in England	Rupee securities in India	Internal bills of exchange

THE RESERVE BANK

An essential part of the scheme formulated by Currency Commission was the formation of a Reserve Bank to take over the Note Issue custody of the Government remittances, and act as a true banker's bank. The Commission pointed out that India was one of the few great countries where the control of currency was divorced from the control of credit, and where Government carried out immense financial transactions through its own agency, and propose the Reserve Bank as the apex of the new financial system.

The Government accepted these recommendations and in January 1927 introduced a Bill to give effect to the Commission's advice. They proposed a shareholders bank, with a commercial directorate tempered by Government nominees and a new agreement with the Imperial Bank freeing it from some of the restrictions imposed. The Bill was referred to a Select Committee when a marked divergence of opinion was manifested. A majority of the Committee carried recommendations for the transference of a shareholders bank into a State Bank with a strong element of directors selected by the legislature. This changed Bill was before the legislature in September, and was withdrawn by the Government for further consideration, it being understood that the Secretary of State for India objected to the drastic changes made in the original scheme.

These objections to the original scheme have been summarized under the following heads. That a Reserve Bank in charge of the credit and currency should be responsible to the legislature that only a State Bank would carry the confidence of the people that a Reserve Bank does not require much capital, and therefore

there was no need to create a body of shareholders and that if a bank with share capital was created there was the risk of it falling under the domination of foreign capitalists, or of Indian capitalists in the big cities.

The real ground of objection was the first the legislature sought to make the Bank responsible to the legislature that opened the great question whether the Reserve Bank should be commercial or political.

The New Bill—After conferring with the authorities in London the Finance Member published in January 1928 the draft of an entirely new Bill. On the main point it was uncompromising. It provided for a shareholders bank, with a capital of five crores of rupees and it entirely excluded political interest in the management by stipulating that members of the legislature were precluded from becoming directors. On all other points it sought to meet the objections to the original scheme. The provisions in this respect governed the directorate and the qualifications for shareholders. As these are important they are set out here—

The Shareholders—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) No amount in excess of twenty thousand rupees shall be issued to any one person or to any two or more persons jointly and no person shall be allowed to acquire an interest in the share capital of the Bank, whether held in his own right, or held jointly with others, or held partly in his own right and partly jointly with others to a value in excess of twenty thousand rupees.

(3) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Madras, Bangoon and Delhi, and a separate issue of shares shall be made in each of the areas served by those registers as hereinafter defined, and shares shall not be transferable from one register to another save in accordance with conditions to be prescribed by the Governor-General in Council.

(4) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register or as a holder of an interest in the share capital of a total nominal value exceeding twenty thousand rupees and no person who is not—

- (a) domiciled in India, or
- (b) a British subject ordinarily resident in India, or

(c) a company registered under the Indian Companies Act, 1913 or a society registered under the Co-operative Societies Act 1912, or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any of His Majesty's dominions and having a branch in British India, shall be registered as a shareholder or be entitled to payment of any dividend on any share

Management.—The essential clauses of the Bill relating to the management of the Bank are —

The general superintendence of the affairs and business of the Bank shall be entrusted to a Board of Directors which may exercise all powers and do all such acts and things as may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting

Save as expressly provided in this Act —(a) no person may be a Director who is not or has not at some time been—(i) actively engaged in agriculture, commerce, finance or industry, or (ii) a director of any company as defined in clause (2) of section 2 of the Indian Companies Act, 1912, or of a corporation or company incorporated by or under any law for the time being in force in any place outside British India, and (b) no person may be a Director who is—(i) a government official or (ii) an officer or employee of any bank or (iii) a director of any bank other than a registered society as defined in clause (c) of section 2 of the Co-operative Societies Act, 1912.

The election or appointment as Director of any person who is a member of the Indian Legislature or of a local Legislature shall be void unless within one month of the date of his election or appointment he ceases to be such member and if any Director is elected or nominated as member of any such Legislature he shall cease

to be a Director as from the date of such election or nomination, as the case may be.

The Board shall consist of the following Directors, namely —(a) a Governor and two Deputy Governors to be appointed by the Governor-General in Council after consideration of any recommendation made by the Board in that behalf, (b) four Directors to be nominated by the Governor-General in Council (c) two Directors to be elected by the Associated Chambers of Commerce (d) two Directors to be elected by the Federation of the Indian Chambers of Commerce (e) one Director representing the interest of agriculture to be elected by provincial co-operative banks holding shares to the nominal value of not less than five thousand rupees (f) eleven Directors to be elected on behalf of the shareholders on the various registers (g) one government official to be nominated by the Governor-General in Council.

The shareholders registered on the various registers shall elect delegates for the purpose of electing Directors to represent them on the Board and the numbers of delegates shall be as follows, namely —(a) for the Bombay register—twenty-four members (b) for the Calcutta register—twenty-four members (c) for the Madras register—ten members (d) for the Bangoon register—ten members (e) for the Delhi register—twenty-four members

The election of delegates for the shareholders on a register shall be held once in every five years, at a convenient time before the expiry of the term of office of the retiring Directors for the election of whose successors the delegates are to be elected

(5) Delegates shall hold office for a period of five years.

Reception of the Bill.—When the Bill was published many of those who were opposed to the original scheme seemed to be chary of committing themselves to an opinion. But the general attitude may be fairly indicated in these terms. By those who accepted the idea of a shareholders bank, the Bill was regarded as a considerable improvement, inasmuch as it safeguarded the country against either alien or capitalist control, and gave every part of the country, and every important interest, representation on the directorate. Those who wanted a State, or in other terms a political bank, stood fast in their opposition and objected the scheme root and branch. There was further criticism that the original Bill having passed through Select Committee and been discussed in the legislature it was unconstitutional to withdraw it and substitute a fresh measure the correct procedure they maintained, was for the original Bill as amended by the Select Committee and the legislature to be proceeded with. The Bill failed to secure the support of the Legislature and was withdrawn

Trade.

India is pre-eminently an agricultural country, and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past, the outcome of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such years as 1899-97 and 1899-1900. Well over thirty per cent. of the cultivable area of the Punjab is under irrigation, and huge new works are in progress to utilise the waters of the Sutlej, and of the Indus in Sind. Whilst these great works have been carried out or are in progress to spill on the land the floods of the snowed rivers of the North other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are being harnessed to preserve their flood waters for Madras. All over India irrigation works, large and small, are being restlessly pressed forward, and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan, and to a lesser extent the Continent of Europe. Continental Europe is also a large buyer of her oils and another produce and of her hides and skins. Whilst the United Kingdom is the great market for tea and wheat foreign countries are very important facts in the Indian export trade, therefore India had a vital interest in the economic recovery of Europe. When the post-war boom collapsed it hit India hard and

for a year or two the export trade reeled under the shock. The progress of the Dawes Plan and the measures taken under the League of Nations to assist Austria and Hungary back to industrial health had a special bearing on the prosperity of India. They have been elements of importance in inducing her recovery of prosperity.

But whilst India is pre-eminently an agricultural country, she ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry which has its home in the town and Island of Bombay with important subsidiary centres at Ahmedabad, Sholapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilise the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa; the mills find their principal outlet in India itself and even there they are subject to severe competition from Japan and China. The iron and steel industry is for the most part a home industry through large quantities of Indian pig iron are shipped to the Far East, and in some years to the western ports of North and South America. Therefore whilst India is still in the main an agricultural country three-quarters of her population drawing their sustenance from the soil, her manufacturing industries are of large and growing importance and their prosperity every year affects in an increasing degree the general prosperity of the people.

I—GENERAL

India, in common with other countries of the world, felt the full effects during 1929-30 of the trade slump which followed the Wall Street collapse in October 1929. The total value of the imports of merchandise into British India amounted to Rs 240.8 crores, a decline of Rs 12.5 crores, or five per cent. compared with the figures for the previous year. Exports declined by Rs 20.1 crores or six per cent. to Rs 317.9 crores. The monsoon was adequate and

generally well distributed although heavy rains in other places resulted in floods, causing damage to crops, particularly in Assam, the Punjab and Sind. The season on the whole was fairly good from the agricultural standpoint. Labour conditions were still unsettled in 1929, the two major incidents of the year being a general strike in the Bombay textile industry and a strike in the jute mills of Bengal.

Volume of Trade.—The following figures have been compiled to show the value of imports and exports of merchandise on the basis of the declared values in 1913-14. These statistics are necessarily approximate but they are sufficiently accurate to afford a fairly reliable measure of the course of trade —

(In crores of rupees)

	1913-14	1922-23	1923-24	1924-25	1925-26	1926-27	1927-28	1928-29	1929-30
Imports	183	138	120	137	143	156	181	190	189
Exports	244	214	240	240	246	228	248	260	263
TOTAL Trade in merchandise excluding re-exports	427	352	360	387	389	384	429	450	452

The total trade in merchandise (excluding re-exports) as exhibited in this table exceeded even the record figure of the previous year by Rs 2 crores and showed an improvement of Rs 25 crores on the basis of 1913-14. This improvement over 1928-29 was due entirely to an expansion of the export trade imports having, as a matter of fact, receded by Rs 1 crore.

Prices in India.—Prices in India followed the general collapse elsewhere. The Calcutta Index Number stood at 143 in September 1929. It fell to 125 by March 1930 a fall of 18 points or about 13 per cent. Since then there has been a further fall of 10 points the index number for July 1930 standing at 115. From September 1929 to July 1930 therefore, there has been a fall of nearly 20 per cent. Such a fall in the course of less than ten months is almost unprecedented in the history of prices in India. This shows that the year was a disastrous one as far as the price level was concerned. The trouble was aggravated by the fact that the fall in prices was far more pronounced in the case of agricultural commodities and raw materials than in the case of manufactured articles. This again was a factor common in all the countries and the world is in the throes of a severe agricultural depression.

The greatest decline was in the case of raw cotton and jute manufactures, both of which fell by 27 per cent. by March 1930 as compared with September 1929. Jute raw and cereals each showed a decline of 20 per cent and oilseeds of 19 per cent. As against this the fall in the case of cotton manufactures was only one of 7 per cent in the case of metals 10 per cent, and of sugar 6 per cent. This shows that the prices of India's exports have fallen far more than the prices of her imports. If the percentage decline of prices in July 1930 below those in September 1929 is taken, the position is shown to be much worse especially in the cases of raw cotton, raw jute, oilseeds and hides and skins. The decline in raw cotton up to July 1930 as compared with September 1929 amounts to over 40 per cent and that in the case of jute to 35 per cent. The fall in oilseeds increased between March and July, 1930 from 19 per cent to 31 per cent and that in the case of hides and skins, which only showed a

decline of 8 per cent in March 1930 amounted to nearly 28 per cent. In July. In the other export groups also there were further declines, though not of the same magnitude and jute manufactures actually showed an increase of nearly 2 points. The index numbers of manufactures were almost on the same level as in March 1930 whereas cotton manufactures have declined since mainly owing to the political agitation since that date.

Imports and Exports.—On the import side the outstanding feature of the year's transactions was a decline of Rs 376 lakhs under cotton manufactures. Cotton piecegoods by themselves accounted for a reduction of Rs 356 lakhs or responding to a decline of 17.3 million yards in quantity the actual receipts of the year having amounted to 1919.3 million yards with a total declared value of Rs 60.25 lakhs. This decline is all the more significant because it occurred in spite of an improvement under grey goods from 832.6 to 925.5 million yards in quantity and from Rs 20.19 lakhs to Rs 20.93 lakhs in value. Consignments of white goods declined from 554.1 million yards valued at Rs 15.33 lakhs to 473.6 millions yards valued at Rs 13.27 lakhs and those of coloured goods from 508.9 million yards valued at Rs 17.35 lakhs to 483.5 million yards valued at Rs 15.15 lakhs. The striking feature in the piecegoods trade was the rapid penetration into the Indian market of Japan imports from which source showed increases of 152 million yards (63 per cent) under greys of 8.4 million yards (164 per cent) under whites and of 44.5 million yards (40 per cent) under coloured. Twist and yarn exhibited a nominal advance on the quantity side from 43.8 million lbs to 43.9 million lbs., although the value recorded declined from Rs 6.59 lakhs to Rs 6.00 lakhs. Among other items included in the textile group, artificial silk (including yarn and goods of artificial silk mixed with other materials) declined from Rs 4.77 lakhs to Rs 4.32 lakhs, silk raw and manufactured from Rs 5.01 lakhs to Rs 4.58 lakhs wool and woollens from Rs 5.02 lakhs to Rs 4.23 lakhs. There were interesting movements under sugar imports of which declined

in value from Rs 16.09 lakhs to Rs 15.78 lakhs, despite an increase on the quantity side from 937 000 tons to 1,011 000 tons. An unusual feature was a remarkable expansion in receipts of beet sugar from 8,400 tons to 131 000 tons simultaneously with a curtailment of the requirements of cane sugar from 860,000 tons to 807 000 tons. The dullness, which had come upon the iron and steel import trade in 1928-29 persisted during the year under review, the total imports having declined from 1,170 000 tons to 972,700 tons in quantity and from Rs 20 24 lakhs to Rs 17.51 lakhs in value. In machinery and millwork, the developments, noticed in the preceding year, could not be maintained and although appreciable advances were made under such items as electrical machinery and prime-movers, the total values recorded for the whole group (including belting) fell off by Rs 8 lakhs to Rs 19 35 lakhs chiefly as a result of the weakening of demand in the mining, tea and sugar industries. One of the palpably retrograde movements of the year was registered under motor vehicles the total value of which declined contrary to all expectations, from Rs 7.72 lakhs to Rs 7.52 lakhs. This was due almost wholly to a falling-off in the number of motor cars imported from 19,600 to 17 400 the decline being almost entirely confined to consignments from Canada and the United States of America. But the upward trend in imports of rubber manufactures was well sustained the value of the imports having advanced by 15 per cent from Rs 2.86 lakhs to Rs 3.30 lakhs mainly as a result of the increased consumption of pneumatic motor covers. Imports of hardware (excluding cutlery and electroplated ware) declined from Rs 5.23 lakhs to Rs 5.07 lakhs, owing principally to reductions under implements and tools, enamelled ironware and retable lamps. The total decline under metals and manufactures thereof, including in this group for purposes of comparison such items as machinery and mill work hardware, cutlery implements and instruments and vehicles, was Rs 84 crores on a total of Rs 67 crores registered in 1928-29. There was a very remarkable improvement under mineral oils, imports of which advanced from 241.9 million gallons valued at Rs 10 70 lakhs to 252.7 million gallons valued at Rs 11 04 lakhs. The steady increase in receipts of kerosene oils, which was noticeable since 1927-28 was more than maintained and the total quantity consigned during the year moved upwards from 104.7 million gallons to 108.4 million gallons concurrently with an advance of about 32 million gallons in the coastwise imports into India proper from Burma. Fuel oil supplemented this increase by advancing from 103.7 million gallons in 1928-29 to the record figure of 110.2 million gallons the recovery being due to the resumption of work in the Bombay cotton mills. Imports of provisions were valued at Rs 5.64 lakhs, a decline of Rs 57 lakhs, which is to be ascribed to the falling-off in the consignments of vegetable product as well as to a reduction in the prices. Imports of liquors advanced from 6.6 million gallons to 7.6 million gallons in quantity and from Rs 3.57 lakhs to Rs 3.77 lakhs. Imports of raw cotton, which had fallen from 64,100 tons in 1927-28 to 28 900 tons in 1928-29,

declined still further in 1929-30 by 4,900 tons, a decrease of 10,000 tons in the share of the United States of America having been set off to some extent by an increase of 4,000 tons in that of Kenya Colony. Imports of paper and pasteboards increased from Rs 3.30 lakhs to Rs 3.72 lakhs, the gain on the quantity side having been 429,000 cwts on a total of 2,312,000 cwts recorded in 1928-29. Imports of wheat which had advanced from 69,300 tons valued at Rs 1.09 lakhs in 1927-28 to 561,900 tons valued at Rs 8.17 lakhs in 1928-29, came down during the year under review to 357,000 tons with a total declared value of Rs 4.98 lakhs, owing largely to the disappearance of the exceptional circumstances ruling in the preceding year.

Exports.—On the export side, the principal phenomenon has been the serious depression in the world demand for jute. The total weight of raw and manufactured jute exported fell by 44,000 tons to 1,785,000 tons, but the value slumped more heavily from Rs 89 crores to Rs 79 crores. Fifty per cent of the total decline recorded on the value side is attributable to raw jute, exports of which fell from 5 028 000 bales to 4 519 000 bales in quantity and from Rs 32 crores to Rs 27 crores in value. Shipments of gunny bags advanced from 498 millions to 522 millions in number, but the gain was discounted by a fall in prices, which sent down the declared value from Rs 25 crores to Rs 22 crores. A similar movement was recorded under gunny cloth, the total declared value for which sagged from Rs 314 crores to Rs 294 crores in spite of an increase in yardage from 1 558 millions to 1,651 millions. Under cotton, the combined values of the year's shipments of the raw product and of the manufactured declined from Rs 74.46 lakhs to Rs 72.79 lakhs. Under the stimulus of a favourable price parity shipments of raw cotton expanded from 3,712,000 bales to 4 070 000 bales, but the value actually recorded a loss of Rs 1 crore on a total value of Rs 60 crores recorded in 1928-29, the advantage of increased shipments having thus been more than neutralised by a serious decline in prices, which can be explained by reference to the pressure of the huge carry-over from the previous year's crop as well as to the low grade of the Broach and Omras crops of the year. Export shipments of cotton manufactures (including twist and yarn) were valued at Rs 7.19 lakhs, which meant a reduction of Rs 61 lakhs on the basis of 1928-29 and of Rs 1.48 lakhs on that of 1927-28. The total decline under cotton piece-goods amounted to 16 million yards in quantity and Rs 70 lakhs in value. The principal feature of this downward movement is the progressive decline in exports of greys which is explained in part by the parlous state of the Bombay mill industry and by the severity of Japanese competition in many of the special markets of the Bombay mills. Under food grains the total shipments advanced from 2,900 000 tons valued at Rs 33.69 lakhs to 2,510,500 tons valued at Rs 34.79 lakhs, but this improvement far from being general was confined almost wholly to rice, shipments of which recovered from 1 817,400 tons to 2,226,000 tons in quantity and from Rs 26.47 lakhs to Rs 31.51 lakhs in value as a result

of the premature exhaustion of the surpluses of the other exporting countries. Exports of wheat, which amounted to 18,000 tons valued at Rs. 21 lakhs, were shorter than the exports of 1928-29 by 102,000 tons in quantity and Rs. 1.48 lakhs in value, the decline on the basis of 1927-28 being 287,000 tons on the quantity side and Rs. 4.20 lakhs on the value side. Taking other kinds of foodgrains together for purposes of comparison, the total decline for the year amounted to 193,000 tons in quantity and Rs. 2.37 lakhs in value, out of which as much as 132,000 tons on the quantity side and Rs. 1.68 lakhs on the value side represented a reduction in the export shipments of barley. In tea the principal feature of the year was the intensification of the preceding year's depression, as a result of which the value of shipments declined from Rs. 23.70 lakhs to Rs. 24.01 lakhs notwithstanding an increase in the quantity shipped from 3,9.6 million lbs. to 378.3 million lbs. Exports of oleseeds amounted to 1,195,000 tons valued at Rs. 27.48 lakhs which meant a decline of 10 per cent. in quantity and of 11 per cent. in value in comparison with the figures for 1928-29 but an increase of 9 per cent. over the average value of the shipments during the previous period. The decline as exhibited in the year's transactions is accounted for by a falling off in the shipments of groundnuts from 748,000 tons valued at Rs. 19.87 lakhs to 714,000 tons valued at Rs. 16.39 lakhs a good part of this decline however, being set off by an increase in the shipments of which rose from 156,700 tons to 248,200 tons in quantity and from Rs. 3.91 lakhs to Rs. 5.72 lakhs in value as a result mainly of the low outturn of the world's linseed crops. Despatches of hides and skins declined from 89,500 tons valued at Rs. 18.87 lakhs to 74,100 tons valued at Rs. 16.03 lakhs. Shipments of lac also fell off by 10 per cent. in quantity and 19 per cent. in value from 748,000 cwt. valued at Rs. 4.64 lakhs to 659,000 cwt. valued at Rs. 4.97 lakhs. Exports of oilseeds which had shown an abnormal development in 1928-29 fell off by Rs. 72 lakhs to Rs. 3.12 lakhs thus showing a decline of Rs. 2 lakhs on the basis of 1927-28.

Coming to re-exports the total value recorded under this head amounted to Rs. 7.13 lakhs in 1929-30. This meant a decline of Rs. 10 lakhs in comparison with the value recorded in 1928-29 and of Rs. 2.41 lakhs on the basis of 1927-28. The bulk of India's re-exports usually passes through Bombay and the effect of this retrogression was as in the preceding year confined mainly to that province the value of her trade having fallen off from Rs. 5.02 lakhs to Rs. 4.52 lakhs and the corresponding percentage share from 64 to 93. The most noticeable movement of the year, so far as Bombay was concerned was a decline in the shipments of raw skins from 323 tons valued at Rs. 1.58 lakhs to 211 tons valued at Rs. 1.05 lakhs. Re-exports of raw cotton from Bombay which had fallen off from 2,790 tons valued at Rs. 44 lakhs in 1927-28 to 551 tons valued at Rs. 9 lakhs in 1928-29 recovered to 1,425 tons valued at Rs. 19 lakhs in 1929-30. Shipments of sugar contracted from 10,000 tons to 7,000 tons in quantity and from Rs. 23 lakhs to Rs. 17 lakhs in value. Re-exports of cotton manufactures (mostly piece-goods) fell from Rs. 89 lakhs to Rs. 78 lakhs.

Re-export of raw wool decreased from 12 million lbs. valued at Rs. 94 lakhs to 8 million lbs. valued at Rs. 65 lakhs.

Balance of Trade.—The visible balance of trade in merchandise and treasure for the year 1929-30 was in favour of India to the extent of Rs. 58 crores compared with Rs. 52 crores in the preceding year. Rs. 50 crores in 1927-28 and the record figure of Rs. 109 crores in 1924-25. The net imports of treasure on private accounts fell from Rs. 24 crores to Rs. 25 crores of which net imports of gold were valued at Rs. 11 crores and of silver at Rs. 12 crores. Net imports of currency notes amounted to Rs. 9 lakhs.

Tariff changes.—The changes in the tariff made under the Indian Finance Act, 1929, and the Indian Tariff (Amendment) Act, 1929, were dealt with in the preceding year's Review. Since then four Acts have been passed introducing important changes in the tariff.

The Indian Finance Act, 1930, which was passed on the 28th March, imposed an import duty of 4 annas an ounce on silver bullion and coins and rolled sheets and plates not further manufactured. It raised the import duty on cotton piece goods from 11 per cent. to 15 per cent. *ad valorem*, raised the import duty on all kinds of sugar and sugar candy (excluding molasses) by Rs. 1.8 per cwt. and reduced the import duty on kerosene from 2½ annas to 2½ annas a gallon and the export duty on rice from 3 annas to 2½ annas a maund. It also raised the import duty on silver manufacturers (plate, thread, wire, leaf, etc.) from 30 to 38 per cent. *ad valorem* consequent upon the imposition of duty on the metal. The reduction of import duty on kerosene was coupled with an increase in the corresponding excise duty from 1 anna to 1½ annas a gallon, while the imposition of customs duty on silver necessitated the imposition of an equivalent excise duty on the local production and this was done under the Silver (Excise) Act, 1930.

The Cotton Textile Industry (Protection) Act, 1930, which was passed on the 4th April provided for the protection of the Cotton Textile Industry and imposed a protective duty of 20 per cent. *ad valorem* on all classes of cotton piecegoods of other than British manufacture with a minimum specific duty of 2½ annas a pound on plain grey goods. For piecegoods of British manufacture the corresponding rate was 15 per cent. *ad valorem* with the same minimum of 2½ annas a pound in the case of plain grey goods. The Act also provided for the continuance of the protection granted to the industry in 1927 in respect of the manufacture of cotton yarn and retained the minimum specific duty of 1½ annas a pound on the imported article. Both these provisions will have effect up to 31st March 1933.

The Indian Tariff (Amendment) Act, 1930, which came into force on the 29th March, removed the import duty on tanning bark, ammonium phosphates, living plants, certain agricultural implements and dairy appliances, poultry farming appliances and incubators, pans for boiling sugar cane juice, sugar centrifuges and sugar pump mills and certain printing and lithographic materials. It also effected certain minor changes such as the imposition of saccharine duty on substances of a like nature or use, equalisation of duty on all domestic refrigerators at 15 per cent. *ad valorem* except-

tion of pilot cores of insulated copper cables from the condition as regards size for assessment purposes and the equalisation of duty on all kinds of hanger beads and false pearls at 30 per cent *ad valorem*.

The Steel Industry (Protection) Act, 1930, which came into force on the 28th March, lowered the limit of the size of the protected

qualities of round and square steel bars and rods from $\frac{1}{4}$ to over 7 inch in order to make the protection more effective. It also imposed the protective duty on tiebars for cast iron sleepers making all spikes and tie bars liable to the same protective duty as bars thus giving full effect to the intention underlying the Act of 1927.

II—IMPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles imported into British India —

IMPORTS

(In thousands of Rupees)

	1925-26	1926-27	1927-28	1928-29	1929-30	Percentage on total imports of merchandise in 1929-30
Cotton and cotton goods	69 31 26	70 08 13	71 90 16	67 10 16	62 90 89	26 13

All other articles	10,30.85	12,63.75	15,01.66	15,26.61	14,33.69	5.95
TOTAL VALUE OF IMPORTS	2,26,17.78	2,31,22.08	2,49,83.64	2,53,30.60	2,40,79.69	100

Cotton Manufacture (Rs. 52.46 Lakhs).—The total value of the imports of cotton manufactures decreased during the year by nearly Rs 3½ crores the decline due to piecegoods being Rs 3½ crores and to yarn about Rs ½ crore. In quantity also there was a slight fall of 17 million yards in piecegoods. But the total amount of yarn imported was almost equal in quantity to that in 1928-29. The cessation of the millstrikes and the normal working of most of the mills have led one to expect a greater import of yarn than in 1928-29 but it will be seen that the Indian mills have been producing yarn to a greater extent than before and the figure for mill-production in 1929-30 was a record one of 834 million lbs. This was far in excess

of the 1928-29 figure and exceeded by 25 million lbs. the previous highest figure of 1927-28. The Indian mills have been greatly increasing their production of yarn of 31 to 40 counts and over 40 counts. In 1927-28 the last normal year, the production of yarn of 31-40 counts was 34 million lbs. In the year under review it was 46 million lbs. The production of yarn above 40 counts was 11 million lbs. in 1927-28. In the year under review it was 15 million lbs. Thus it will be seen that the Indian mills are producing yarn of higher counts in ever increasing quantities and automatically, therefore must be a reduction or, at least an absence of increase in imports under these heads.

The value of the different classes of imported cotton manufactures during the past five years and the pre war year 1913-14 is set forth below—

Imports of cotton Manufactures	1913-14 pre war	1920-26	1926-27	1927-28	1928-29	1929-30
	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)
Twist and yarn	4.16	7.77	6.62	6.79	6.29	6.00
Piecegoods—						
Grey (unbleached)	25.45	21.89	19.62	21.25	20.19	20.93
White (bleached)	14.29	10.99	17.63	15.42	15.33	13.27
Coloured printed or dyed	17.86	15.92	17.22	17.62	17.35	16.15
Fents of all descriptions	0.4	70	65	94	94	90
TOTAL PIECEGOODS	38.14	54.50	50.02	50.13	53.81	50.20
Hosiery	1.20	1.40	1.47	1.33	1.45	1.44
Handkerchiefs and shawls	89	22	19	17	16	17
Thread	39	84	74	77	71	81
Other sorts	1.52	94	1.02	92	82	82
GRAND TOTAL	66.30	65.67	65.05	65.16	63.24	59.49

Cotton Twist and yarn (Rs. 6.00 Lakhs).—The imports of twist and yarn amounted to 43.9 million lbs in quantity and Rs. 6.00 lakhs in value as compared with 43.8 million lbs and Rs. 6.29 lakhs in 1928-29. Thus the quantity of yarn imported was almost the same as in the previous year, though there was a decline of Rs. 29 lakhs in value. Of the total imports 20.1 million lbs came from the United Kingdom 10.9 million lbs from Japan and 10.6 million lbs from China. The share of the United Kingdom in the total trade in cotton twist and yarn declined from 53 per cent in 1928-29 to 46 per cent in 1929-30. Japan's share on the other hand increased from 17 per cent in 1928-29 to 20 per cent in 1929-30. It appears that Japan is slowly making up the ground she had lost.

Cotton Piecegoods (Rs. 50.25 Lakhs).—The imports of cotton piecegoods, including fents, decreased by the relatively small amount of 17 million yards as compared with 1928-29. The decrease in value, however, was very considerable being Rs. 3.56 lakhs. Compared with the pre-war year 1913-14, the imports of 1929-30 were less by over 1,378 million yards. The figures for the three important classes of cotton piece-

goods from 1913-14 onwards are set forth in the table below—

Year	Grey (unbleached)	White (bleached)	Coloured printed or dyed
	Million yards	Million yards	Million yards
1913-14	1,534.2	793.3	931.3
1914-15	1,320.2	604.2	484.8
1915-16	1,148.2	611.4	308.7
1916-17	847.0	589.8	454.9
1917-18	625.5	502.3	395.6
1918-19	583.4	286.6	227.3
1919-20	533.3	322.0	206.3
1920-21	580.2	421.8	489.8
1921-22	625.6	306.2	183.3
1922-23	981.0	402.5	243.8
1923-24	704.0	415.3	247.0
1924-25	846.5	548.9	407.0
1925-26	709.1	466.1	386.8
1926-27	743.4	571.0	447.4
1927-28	875.5	556.5	504.8
1928-29	838.6	554.1	506.9
1929-30	925.5	473.6	483.5

The imports of coloured, printed and dyed goods from 1923-24 are set forth below —

	1923-24		1924-25		1925-26		1926-27		1927-28		1928-29		1929-30	
	Min yds	Rs (lks.)	Min yds	Rs (lks.)	Min yds	Rs (lks.)	Min yds	Rs (lks.)	Min yds	Rs (lks.)	Min yds	Rs (lks.)	Min yds	Rs (lks.)
Total printed goods	182 5	8,14	189 0	8 12	166 9	6,55	176 8	6,13	235 5	7,53	244 4	7,41	199 9	5 77
Total dyed goods	110 1	6,12	142 2	7,54	106 8	4,38	157 0	6,17	168 3	5,61	155 6	5 62	151 0	4 92
Total woven coloured goods	54 9	3,43	75 8	4,36	92 1	4,49	113 8	4,92	111 2	4,38	106 9	4,32	132 5	4,47

In contrast to the two preceding years, the imports of printed goods fell considerably in the year under review both in quantity and value. The imports under this head amounted to 235 million yards in 1927-28 and Rs 24 lakhs in 1928-29 but declined to 201 million yards in 1929-30. The decline in value was from Rs 7,53 lakhs in 1927-28 and Rs 7,41 lakhs in 1928-29 to Rs 5,77 lakhs in 1929-30.

Imports of dyed goods very slightly declined from 156 million yards to 151 million yards in 1929-30, but the imports under total woven coloured goods increased from 107 million yards to 132 5 million yards in 1929-30. This is the highest figure attained since 1923-24. Detailed figures relating to the imported Piece-goods are given below in millions of yards —

Grey (un bleached)	1913-14 (pre-war year)	1923-29	1929-30	White (bleached)	1913-14 (pre-war year)	1923-29	1929-30	Coloured printed or dyed	1913-14 (pre-war year)	1923-29	1929-30

TOTAL	1 534 2	836 6	925 5	TOTAL	793 5	554 0	473 6	TOTAL	831 6	606 9	483 5

The United Kingdom's share in the imports of grey goods decreased from 683 million yards to 521 million yards, a decrease of 61 million yards or 10 per cent. The Japanese share, on the other hand increased from 242 million yards to 394 million yards, an increase of 152 million yards or 63 per cent. It will be seen that the total increase under grey piecegoods is 87 million yards this increase being chiefly due to greater imports from Japan. The increase in the total imports shows that Japan was competing effectively with home production, while the decrease in imports from the United Kingdom shows that Japan is ousting the

United Kingdom from this class of imports. Thus Japan emerged in this year as a very serious competitor both to the Indian mills and to the United Kingdom. Imports from China declined by about 34 million yards and from the United States of America by about half a million yards. As regards white goods, they were, as usual, mainly imported from the United Kingdom but there was a considerable decline in the total import under this head which was mainly due to a reduction in imports from the United Kingdom by 80 million yards. It is interesting to note that even in white goods Japan increased her share from 5 5 million yards

in 1928-29 to 13.9 million yards in 1929-30 in the imports of coloured, printed or dyed piecegoods the share of the United Kingdom fell by 57 million yards. Imports from Italy also declined from 38 million yards to 23 million yards in the year under review, a decline of 15 million yards. On the other hand Japan increased her share from 110 million yards to 154 million yards in 1929-30 an increase of 44 million yards. The share of the Netherlands also went up from 11 million to 14 million

yards. Thus this was a year of Japan's advance in the Indian market. The trade which the United Kingdom and Italy lost in the year under review was almost wholly absorbed by Japan. The percentage shares in 1913-14 and in the past five years, of the United Kingdom and Japan the two principal competitors in the Indian piecegoods import trade, in each of the three important classes of piecegoods, are set forth below —

Percentage shares of the United Kingdom and Japan in the imports of cotton piecegoods.

	1913-14		1925-26		1926-27		1927-28		1928-29		1929-30	
	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan
Cotton piecegoods—												
Grey	98.8	—	79.2	20.1	78.7	20.7	74.4	24.5	69.4	28.8	56.2	42.5
White	96.5	—	96.0	1.0	96.4	5.6	94.7	1.0	94.5	1.0	92.1	2.9
Coloured	92.6	2	73.1	19.0	71.1	19.2	69.8	20.3	66.2	21.7	57.6	31.9

Artificial silk (Rs. 4.32 lakhs).—The trade under this head slightly increased in quantity though not in value. The increase was in the imports of piecegoods of cotton and artificial silk and not in artificial silk yarn. The imports of artificial silk yarn in the year under review were 7.4 million lbs as compared with 7.7 million lbs in 1928-29 thus showing a slight decrease of 3 million lbs. In value there was a much greater decline from Rs. 1.35 lakhs in 1928-29 to Rs. 90 lakhs in 1929-30 a fall of Rs. 36 lakhs. The share of the United Kingdom fell from 1.7 million lbs valued at Rs. 30½ lakhs in 1928-29 to 1.4 million lbs valued at Rs. 19½ lakhs in the year under review.

As regards imports of piecegoods of cotton and artificial silk the outstanding feature of the year was the enormous growth of imports under this head from Japan. The total imports of these piecegoods in the year under review were 56.6 million yards valued at Rs. 3.15 lakhs as compared with 49.8 million yards valued at Rs. 3.30 lakhs in 1928-29. Thus there was an increase of 6.8 million yards in quantity but a decline of Rs. 15 lakhs in value. The largest single supplier of piecegoods of artificial silk and cotton was Japan imports from which country amounted to the enormous figure of 25 million yards valued at Rs. 1.40 lakhs in 1929-30 as compared with 8.8 million yards valued at Rs. 90½ lakhs in 1928-29. Thus there was an increase of 21.2 million yards in quantity and of Rs. 1.09 lakhs in value in Japan's share in the year under review. The rise of Japan in this particular trade is even more sensational than her rise in grey and coloured cotton piecegoods in the year under review.

Wool Raw and manufactured (Rs. 4.28 lakhs).—Imports of raw wool increased from 9 million lbs to 6.7 million lbs the increase in value was from Rs. 49.5 lakhs to Rs. 51.7 lakhs. Imports from the United Kingdom slightly decreased from 1.249 000 lbs valued at Rs. 19½ lakhs to 1.219 000 lbs valued at Rs. 16½ lakhs.

Imports from Persia went up from 2 362 000 lbs valued at Rs. 8½ lakhs to 2 379 000 lbs valued at Rs. 9 lakhs. The share of Australia went up from 1,841 000 lbs valued at Rs. 17½ lakhs to 2 430 000 lbs valued at nearly Rs. 22 lakhs. The increase in the supplies from Australia has been continuous during the last four years. Imports of woollen piecegoods declined in the year under review as compared with 1928-29 by 21 per cent. Imports from the United Kingdom decreased from 5.5 million yards valued Rs. 1.22 lakhs in 1928-29 to 3.7 million yards valued at Rs. 91 lakhs in 1929-30.

Silk Raw and manufactured (Rs. 4.58 lakhs).—The imports of raw silk increased from 2.1 million lbs to 2.2 million lbs the increase mainly occurring in the imports from China. The value of the imports in 1929-30 was almost the same as in 1928-29. The predominant supplier of raw silk was, as usual, China (including Hongkong) which supplied 2.1 million lbs out of the total imports of 2.2 million lbs in the year under review as compared with 1.0 million lbs out of 2.1 million lbs in 1928-29.

Metals and manufactures thereof (Rs. 23.59 lakhs).—The imports of metals and manufactures thereof declined by 204,000 tons or 17 per cent. in quantity from 1,232,000 tons to 1,028,000 tons and by Rs. 94 crores or 13 per cent. in value from Rs. 27 crores to Rs. 23½ crores. Iron and steel represented Rs. 17 crores of this total as compared with Rs. 20 crores in 1928-29 and receded to the third place among India's imports the first two being cotton manufactures (Rs. 69½ crores) and machinery and mill work (Rs. 19½ crores). If such items as machinery and millwork, hardware cutlery, implements and instruments, and vehicles were included in one head with metals and manufactures thereof the total value would aggregate Rs. 63½ crores while the value of the most important group among imports, viz., yarn and textile fabrics amounted

to Rs 72½ crores in the year under review. In the preceding year the metals group accounted for Rs 67 crores, while the textile had totalled Rs 78 crores.

Iron and Steel (Rs. 17.21 lakhs).—India, despite her increasing production is largely dependent on foreign supplies. The United Kingdom is still the premier supplier of iron and steel to India, but the British proportion in the import trade is on the decline.

Other Metals (Rs. 8.26 lakhs).—Imports of metals other than iron and steel recorded a decrease of nearly 7,000 tons in quantity and of Rs 36 lakhs in value from 62,400 tons valued at Rs 6.74 lakhs in 1928-29 to 55,500 tons valued at Rs. 6.38 lakhs in the year under review.

Machinery and Millwork (Rs. 19.25 lakhs).—The imports of machinery and millwork (including belting for machinery and printing presses) in 1929-30 declined to Rs 19.25 lakhs from Rs 19.43 lakhs in the preceding year.

The most noticeable increase was recorded under primemovers (other than electrical) imports of which rose from Rs 3.04 lakhs to Rs 4.11 lakhs. The improvement under this head was due almost entirely to larger importations of railway locomotive engines and tenders and parts which were valued at Rs 1.97 lakhs as compared with Rs 98 lakhs in 1928-29. Besides there were other items which showed appreciable increases during the year, notably jute mill machinery and electrical machinery, paper mill machinery, mining machinery, tea and sugar machinery, recorded considerable decreases.

Motor Vehicles (Rs. 7.52 lakhs).—In the beginning of the year it was anticipated that the imports of motor cars in 1929-30 would nearly equal if not surpass the record figures of the preceding year and it looked as though

this anticipation was going to be realised, for during the first half of the year the number of motor cars imported was 8,869 as against 7,744 in the corresponding period of 1928-29. During the latter half however, owing to the financial crisis in the United States of America the supplies from America were considerably reduced with the result that imports began to decline and in the final month of the year fell to the unusually low figure of 816 cars the lowest for any one month in the past three years. The number of cars imported in the whole year was 17,399 valued at Rs 3.76 lakhs a decrease of 11 per cent both in quantity and value as compared with 19,567 valued at Rs 4.21 lakhs in 1928-29. Over 84 per cent of the cars imported into India came from the United States of America and Canada and 21 per cent from the United Kingdom as compared with 74 and 19 per cent respectively in the preceding year. The average declared value of cars imported from the United Kingdom dropped from Rs 2.476 in 1928-29 to Rs 2.589 in 1929-30 and that of cars imported from the United States declined from Rs 2.150 to Rs 2.130 (Canadian cars however showing a higher average value of Rs 1.800 compared with Rs 1.640 in the preceding year). These figures seem to suggest that the medium powered car is giving place on the one hand to more powerful vehicles, generally of American origin and on the other hand to light cars, several makes of which have been put on the market. British manufactures however, Average prices of British cars have no doubt shown a welcome decline but power for power they still compare unfavourably with those of American makes.

The following table shows the number of all classes of motor vehicles registered in the different provinces of British India up to the end of March 1930—

Number of motor vehicles registered in British India up to 31st March 1930

Provinces	Motor cars including taxicabs	Motor cycles including scooters and auto wheels	Heavy motor vehicles (lorries, buses etc.)	Total
	Number	Number	Number	Number
Bengal including Calcutta	30,808	4,052	3,695	38,555
Bombay City	(a) 12,640	(a) 880	(a) 980	(a) 14,500
Bombay Presidency (excluding Bombay City and Sind)	(a) 9,430	(a) 1,020	(a) 125	(a) 10,575
Madras City	11,344	2,876	1,711	15,931
Madras Presidency (excluding Madras City)	7,061	1,777	6,392	15,230
United Provinces	11,067	3,275	5,043	19,405
Punjab	10,857	3,945	5,766	20,568
Burma	(b) 10,208	(b) 1,243	(b) 6,381	(b) 17,832
Bihar and Orissa	7,820	1,123	1,781	10,524
Central Provinces	4,580	1,035	2,165	7,780
Sind	3,580	1,035	154	4,769
Delhi	5,090	1,021	887	7,000
North West Frontier Province	2,737	1,657	1,264	5,658
Ajmer Merwara	458	182	152	732
Annam	(c) 2,073	(c) 302	(c) 1,453	(c) 3,828
Total	1,28,868	25,877	37,950	1,92,695

(a) Represent number of vehicles registered during the year ending 31st March 1930

(b) Represent number actually running at the end of June 1930

(c) Relate to the year ended 31st December 1929

Sugar (Rs.18.78 lakhs).—Imports of sugar of all sorts, excluding molasses, increased from 869,000 tons in 1928-29 to 940,000 tons in 1929-30. There was, however, a decline in value owing to lower prices. The total value in 1928-29 amounted to Rs.15.86 lakhs. It declined to Rs.15.81 lakhs in 1929-30. The increase in the imports of sugar was due entirely to the enormous imports of beet sugar from Europe which increased from 8,000 tons in 1928-29 to 181,000 tons in 1929-30 an increase of 123,000 tons. Imports of sugar 16 D 8 and above declined from 860,000 tons in 1928-29 to 807,000 tons in 1929-30, a decline of 53,000 tons. The main decrease was in the imports from Java (including consignments from the Straits Settlements) which declined from 851,600 tons valued at Rs.15.49 lakhs in 1928-29 to 780,100 tons valued at Rs.12.71 lakhs in 1929-30. Thus there was a decline of 71,500 tons in quantity and Rs.2.78 lakhs in value. Imports from the United Kingdom of sugar 16 D 8 and above went up from 1,400 tons to 14,200 tons in 1929-30, the increase in value being Rs.22 lakhs from Rs.3 lakhs to Rs.25 lakhs. Imports from Ceylon declined by about 400 tons only as compared with the preceding year, whereas imports from China (including Hongkong) increased by about 600 tons. The total amount of beet sugar imported during the year was 181,000 tons as compared with 8,400 tons in the preceding year. Imports from most of the European countries went up. The United Kingdom sent 45,000 tons valued at Rs.78 lakhs in 1929-30 as compared with 3,000 tons valued at nearly Rs.7 lakhs in 1928-29. Imports from Hungary went up from 2,000 tons valued at Rs.4 lakhs in 1928-29 to 36,000 tons valued at Rs.60 lakhs in 1929-30. Imports from Germany also went up from 275 tons in 1928-29 to 14,000 tons valued at Rs.24 lakhs in 1929-30. The share of Czechoslovakia increased from 421 tons in 1928-29 to 9,500 tons valued at Rs.18 lakhs in 1929-30. Imports from other countries went up from 2,000 tons valued at Rs.4 lakhs in 1928-29 to 28,000 tons valued at Rs.46 lakhs in 1929-30. The bulk of the imports of beet sugar during the year was received in Sind and Bombay.

Mineral oils (Rs.11.04 lakhs).—The total imports of all kinds of mineral oils into British India rose by 4.5 per cent in quantity from 242 million gallons in 1928-29 to 253 million gallons in 1929-30 and by 3 per cent in value from Rs.10.70 lakhs to Rs.11.04 lakhs. Of the total quantity of mineral oils imported kerosene oil represented 42 per cent fuel oil 44 per cent and lubricating oil 14 per cent. Since 1927-28 the imports of kerosene oil into India have gone steadily ahead, constituting a new record each year. The 1929-30 imports shattered all previous records and amounted to 104½ million gallons as compared with 104½ million gallons in 1928-29 and 94 million gallons in 1927-28. It should be remembered that conditions in India where about 60 per cent of the population live in scattered villages are particularly favourable for the use of kerosene for lamp oil. In fact, India ranks third after the United Kingdom and China as a world importer of kerosene. India's requirements are also met from the oil fields in Burma. Consignments imported from Burma into India proper amounted to 125 million gallons as compared with 93½ million gallons in 1928-29 and 190

million gallons in 1927-28. Of the foreign supplies, the United States increased her contribution from 14 to 23 million gallons, while the receipts from Russia, including Georgia and Azerbaijan (which for the first time sent 7½ million gallons in 1929-30), fell from 43 to 37 million gallons.

Hardware (Rs.5.07 lakhs).—There was a decline of 16 lakhs in the imports of hardware (excluding cutlery and electroplated ware), which were valued at Rs.5.07 lakhs as compared with Rs.5.23 lakhs in 1928-29 and Rs.5.34 lakhs in 1927-28. The chief items which accounted for this decline were implements and tools, other than agricultural, enamelled ironware and metal lamps.

Provisions (Rs.5.64 lakhs).—The value of the total imports of provisions fell from Rs.6.21 lakhs in 1928-29 to Rs.5.64 lakhs in 1929-30. The decline was mainly due to smaller importations of vegetable product as a result of the growing prejudices against the commodity which in some places has led to the enactment of local regulations prohibiting its importation within their boundaries.

Liquors (Rs.3.77 lakhs).—The total quantity of liquors imported rose by 12 per cent from 6,790,000 gallons in 1928-29 to 7,579,000 gallons in 1929-30 the corresponding increase in value being only of 6 per cent from Rs.3.57 lakhs to Rs.3.77 lakhs. The increase was reflected in the takings of all provinces with the exception of Burma. Bombay took the largest quantity, over 2,290,000 gallons compared with 1,806,000 gallons in 1928-29 and was followed by Bengal with 2,218,000 gallons as compared with 1,961,000 gallons in the preceding year. The position is however reverse if the values of the imports are taken into consideration. Imports into Bengal were valued at Rs.1,12½ lakhs or nearly Rs.4 lakhs more than those into Bombay.

Paper and pasteboard (Rs.3.72 lakhs).—The quantity of paper and pasteboard imported rose by 19 per cent from 118,600 tons in 1928-29 to 137,000 tons in 1929-30 and by 13 per cent in value from Rs.3.30 lakhs to Rs.3.72 lakhs. Printing paper was imported to the extent of 40,300 tons valued at Rs.1.23 lakhs as compared with 34,600 tons valued at Rs.1.06 lakhs in the preceding year. The increase was solely in newsprinting paper the imports of which amounted to 24,300 tons valued at Rs.68 lakhs as against 17,000 tons valued at Rs.42½ lakhs in 1928-29, while other kinds of printing paper recorded a decrease of 9 per cent in quantity from 17,600 tons to 16,000 tons and of 6 per cent in value from about Rs.4 lakhs to Rs.3.80 lakhs. Norway with her abundant resources of wood pulp maintained the lead in the printing paper trade and supplied 12,900 tons valued at Rs.34 lakhs as compared with 9,900 tons valued at Rs.23 lakhs in 1928-29.

Chemicals (Rs.2.79 lakhs).—The total imports of chemicals (excluding chemical manures and medicines) increased by Rs.81 lakhs from Rs.48 lakhs in 1928-29 to Rs.79 lakhs in 1929-30 of which soda compounds accounted for Rs.31 lakhs or 49 per cent as compared with Rs.1.18 lakhs or 46 per cent in the preceding year. The United Kingdom supplied, as usual, the bulk of sodium carbonate.

Salt (Rs. 1.30 lakhs).—The course of prices of salt in India was almost consistently down ward during the year 1928-29. Prices of imported salt have been reduced to a level at which it threatens to compete with the Indian product. The imports of foreign salt by sea into British India increased by 5 per cent in quantity from 615,000 tons in 1928-29 to 644,000 tons in 1929-30 but, owing to lower prices, declined in value from Rs. 1.47 lakhs to Rs. 1.30 lakhs.

Tobacco (Rs. 2.78 lakhs).—The recovery made in 1928-29 in the imports of unmanufactured tobacco proved to be short-lived and the imports fell from 6½ million lbs in 1928-29 to 4½ million lbs. There is little doubt that the high duties imposed in March 1927 serve as a handicap to the continued expansion of this trade. The imports were largely from the United States of America, which supplied 4½ million lbs or 97 per cent of the total quantity imported as compared with 6½ million lbs or 98 per cent in the preceding year. On the other hand the imports of cigarettes advanced from nearly 5 million lbs to 5.3 million lbs in quantity and from Rs. 2.01 lakhs to Rs. 2.13 lakhs in value. As usual the United Kingdom controlled over 99 per cent of the trade, her supplies being valued at Rs. 2.12 lakhs as against Rs. 2.00 lakhs in 1928-29, the remainder came chiefly from the United States of America, Egypt and Aden. There were larger receipts of cigars

and pipe tobacco amounting to 40,000 lbs and 223,000 lbs as compared with 34,000 lbs and 218,000 lbs respectively in 1928-29.

Glass and glassware (Rs. 2.82 lakhs).—The imports of glass and glassware registered a considerable improvement, the value having risen from Rs. 2,57½ lakhs to Rs. 2,52 lakhs. A remarkable recovery was made by Czechoslovakia which bids fair to challenge Japan's supremacy in this trade.

Cement (Rs. 64 lakhs).—The imports of cement were on a lower level than in the preceding year, the quantity fell from 127,800 tons to 121,800 tons and the value from Rs. 68 to Rs. 64 lakhs.

Coal (Rs. 41½ lakhs).—Imports of foreign coal rose by 81 per cent in quantity from 171,000 tons in 1928-29 to 314,000 tons in 1929-30 and by 26 per cent in value from Rs. 33 lakhs to Rs. 41½ lakhs. To meet the industrial demands of Bombay, coal was imported from the Union of South Africa to the extent of 197,000 tons compared with 105,000 tons in 1928-29 and 155,000 tons in 1927-28. It should be remembered that at the beginning of 1928, South African railways made a reduction in their rates for transportation of bunker and cargo coal from certain mines to Durban which was followed by a further reduction effective from January 1929, for more distant coalleries.

The following table shows the sources of the imports of foreign coal during the past five years —

	1925-26	1926-27	1927-28	1928-29	1929-30
	Tons	Tons	Tons	Tons	Tons
United Kingdom	97,000	13,000	52,000	39,000	19,000
Natal	114,000	86,000	155,000	105,000	197,000
Japan	14,000	1,000	6,000	1,000	1,000
Portuguese East Africa	126,000	26,000	35,000	21,000	
Australia	12,000	13,000	9,000	1,000	2,000

Matches (Rs. 11 lakhs).—India is no longer dependent on foreign countries for her supply of matches, as the local industry which has grown up behind the protection of the tariff is in a position practically to meet all her requirements. Since the imposition of the high duties in 1923 which were declared protective in 1925 in accordance with the recommendations of the Tariff Board imports of matches have progressively declined and in 1929-30 amounted to only 1 million gross of boxes valued at Rs. 11 lakhs as compared with 1½ million gross valued at Rs. 17 lakhs in 1928-29 and 1¾ million gross valued at Rs. 2.04 lakhs in 1921-22, when lower rates of duty prevailed.

III.—EXPORTS OF MERCHANDISE

The following table shows the comparative importance of the principal articles exported from British India —

EXPORTS

(In thousands of Rupees)

	1925 26	1926 27	1927 28	1928 29	1929 30	Percentage on total exports of merchandise in 1929 30
Jute raw	37 94.57	26 78.04	30 66.28	36 34.92	27 17.38	8.74

TOTAL VALUE OF EXPORTS	3 74 83.21	3 01 43.56	3 19 15.35	3 30 12.79	3 10 30.55	100

Jute and jute manufactures (Rs. 78.18 lakhs).—The total area under jute in 1929 was 3 317 000 acres and the total out turn was 9.8 million bales. The out-turn of jute in 1928 was 10 million bales whereas in 1927 it was 10.2 million bales. Thus there was a slight decline in the out turn of jute in the year under review. The decline was due almost entirely to a net reduction in the yield of Assam by 311,000 bales owing to heavy rains and floods. The out-turn of jute in Bengal actually showed an increase of about 141 000 bales.

The total weight of raw manufactured jute exported during the year amounted to 1 760 000 tons or 44 000 tons less than in the preceding year. The total value declined from Rs. 89 crores in 1928-29 to Rs. 70 crores in 1929-30, a drop of Rs. 10 crores. Raw jute accounted for 34 per cent of this value and jute manufactures for 66 per cent as compared with 36 per cent and 64 per cent respectively in the preceding year. The following statement compares the quantities exported during 1928-29 and each of the past three years—

	1913-14	1927-28	1928-29	1929-30
Jute (in thou sand tons)	788	892	888	807
Bags (in millions)	800	463	484	522
Cloth (in million yards)	1 061	1 038	1 068	1 061

Cotton (Rs. 65.88 lakhs).—The home demand for the cotton crop of 1928-29 was very moderate owing to the severe slump in the cotton mill industry. This depressed the price of Indian cotton and the parity throughout the year was turning more and more in favour of Indian cotton as against American cotton.

This naturally led to an increase in the exports of raw cotton in the year under review as compared with the preceding two years. Exports in 1929-30 amounted to 4 070 000 bales as compared with 3 712 000 bales in 1928-29 and 3 686 000 bales in 1927-28, an increase of 358 000 bales over 1928-29 and of 1 384 000 bales over 1927-28. Owing to the decline in the price of Indian cotton however the increased exports of 1930-31 were valued only at Rs. 65 crores as compared with Rs. 66 crores in 1928-29. Another interesting fact to be noted as regards raw cotton exports of this year is that the increase in exports was shared by most of India's customers and was not confined to any particular country. Japan as usual was India's biggest customer and took 1 640 000 bales valued at Rs. 27 crores in 1928-29 as compared with 1 610 000 bales valued at Rs. 29 crores in 1928-29. China the next biggest customer increased her share from 498 000 bales valued at Rs. 7.3 crores in 1928-29 to 566 000 bales valued at Rs. 9.3 crores in 1929-30. Italy increased her takings from 384 000 bales valued at Rs. 6.6 crores to 393 000 bales valued at Rs. 5.8 crores. Exports to Germany increased from 324 000 bales in 1928-29 to 344 000 bales in 1929-30, the value however declining from Rs. 5.7 crores to Rs. 4.9 crores. Exports to Belgium declined very slightly from 347 000 bales valued at Rs. 6.2 crores in 1928-29 to 341 000 bales valued at Rs. 5.6 crores in 1929-30. The United Kingdom took 270 000 bales as compared with 241 000 bales in 1928-29. There was, however, a decline in value from Rs. 4.4 crores to Rs. 4.3 crores in 1929-30. France increased her takings from 204 000 bales valued at Rs. 3.6 crores to 253 000 bales valued at Rs. 3.8 crores. The United States of America took 81 000 bales valued at Rs. 1.2 crores in 1929-30 as compared with 47 000 bales valued at Rs. 77 lakhs in 1928-29.

The Netherlands and Spain also increased their takings. The following statement gives the monthly exports of Indian cotton during the last five years together with the pre-war average—

Exports of Indian cotton in bales of 400 lbs

	Pre war average 1908-14	1925-26	1926-27	1927-28	1928-29	1929-30
April	303 800	430 100	385 400	226 100	321 800	386 300
May	248 800	405 900	395 200	200 600	372 400	404 900
June	218 900	424 400	280 100	240 300	304 900	382 200

Cotton manufactures (Rs. 7.19 lakhs).—The cotton industry in 1929-30 did not attain normal conditions and the situation in Bombay was particularly disturbed on account of continual labour troubles. The production of yarn in mills in India in 1929-30 showed an enormous increase of 194 million lbs over the low figure of 1928-29 and of 25 million lbs over the record figure of 1927-28. The total production in India in 1929-30 amounted to 834 million

lbs as compared with 646 million lbs in 1928-29 and 808 million lbs. in 1927-28. The production of piecegoods in Indian mills in 1929-30 increased by 28 per cent as compared with the preceding year. The proportion of the exports of piecegoods to the total production was 8 per cent as compared with 8 per cent in 1928-29 and 7 per cent in 1927-28. The actual quantity exported declined by 16 million yards or 10.7 per cent as compared with that of the preceding year.

Detailed figures of export for the past three years and for 1913-14 are given below —

	1913-14 (pre war year)	1927-28	1928-29	1929-30
	Million yards	Million yards	Million yards	Million yards
Grey and bleached piecegoods—				
Shirtings	2.2	2.1	2.0	2.5
Chaddars and dhuties	7.6	3.8	3.9	4.0
T. cloth and domestics	21.6	1.4	3.0	2.0
Drills and jeans	6	4	3	3
Other sorts	12.2	11.6	8.4	7.4
TOTAL	44.2	19.3	17.8	16.2
Coloured piecegoods	45.0	149.3	131.4	117.2
TOTAL PIECEGOODS	89.2	168.6	149.3	133.4

Foodgrains and flour (Rs. 34.79 lakhs).—Exports under this head went up considerably in the year under review as compared with the preceding year. It must be noted, however, that this increase was due entirely to the larger exports of rice. Exports of other kinds of foodgrains showed considerable decreases. The total quantity of foodgrains and flour exported amounted to 2,510,000 tons as against 2,300,000 tons in the preceding year, an increase of 210,000 tons. The increase in value was from Rs. 33.69 lakhs in 1928-29 to Rs. 34.79 lakhs in 1929-30, an increase of Rs. 1.10 lakhs. Shipments of rice increased from 1,816,000 tons in 1928-29 to 2,326,000 tons in 1929-30, an increase of 510,000 tons. Exports of wheat almost reached the vanishing point and were only 13,000 tons in 1929-30 as compared with 115,000 tons in 1928-29 and 1,308,000 tons the pre-war average. Exports of wheat flour also declined by 3,000 tons to 51,000 tons. Shipments of barley sank to the very low figure of 6,000 tons as compared with 138,000 tons in the preceding year. Exports of pulses declined from 114,000 tons in 1928-29 to 97,000 tons in 1929-30 and those of jowar and bajra from 42,000 tons to 16,000 tons.

Oilseeds (Rs. 26.48 lakhs).—As in the preceding year oilseeds occupied the fourth place among India's exports, the first three being jute and cotton raw and manufactured and food grain. The total exports of oilseed amounted to 1,195,000 tons valued at Rs. 26.48

lakhs and showed a decrease of 10 per cent in quantity and 11 per cent in value below the preceding year's figures. Compared with the pre-war average there was a decline of 18 per cent in quantity but an increase of 9 per cent in value. The table below shows the quantities of the principal kinds of oilseeds exported during the last three years and in the pre-war quinquennium. Owing to a shortage of world supplies Indian linseed was in better demand but exports of all other varieties of oilseed showed a decided drop. During the first-half of the year prices remained at a reasonable level. Later an acute depression set in as a result of the financial crisis in the United States of America which has its repercussions in Europe, and prices began to decline.

	Pre-war average	1927-28	1928-29	1929-30
	(Thousands of Tons)			
Linseed	379	222	157	249
Rape seed	273	66	77	44
Groundnuts	212	618	788	714
Castor	114	122	127	106
Cotton	240	153	131	58
Sesamum	119	11	30	11
Copra	31			
Others	85	22	24	14
TOTAL	1,453	1,209	1,328	1,195

Exports

891

Tea (Rs. 24.81 lakhs).—The tea industry was in the throes of a severe depression. The outstanding feature of the tea trade in the year under review was a serious drop in prices which at certain stages of the season were definitely below the cost of production. The total production of tea in India in 1929 was estimated at 433 million lbs as compared with 404 million lbs in 1928 and 391 million lbs in 1927. As usual Assam contributed the largest share, viz 250 million lbs or 58 per cent. of the total output while Northern India, excluding Assam, contributed 116 million lbs or 27 per cent and Southern India 58 million lbs or 13 per cent. The production in Assam increased by 13 million lbs, whereas the production in the rest of Northern India increased by 15 million lbs. The total area under tea in 1929 was 788,000 acres as against 776,000 acres in 1928.

Export of tea by sea to foreign countries

	1905-06	1915-16	1924-25	1925-26	1926-27	1927-28	1928-29	1929-30
	lbs. (1,000)	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs (1 000)	lbs. (1 000)	lbs. (1 000)	lbs (1 000)
From Northern India (Calcutta and Chittagong)	199 737	301,408	399 747	380 024	301 607	310 109	309 845	326 363
From Southern India (Madras ports)	12 680	35 840	37 717	43 133	42 933	40 744	49,321	49 671
From Bombay, Sind and Burma	1 807	11 227	2 643	2 576	1 372	761	436	600
Total	214 224	338 470	440 107	425 733	345 364	351 614	359 602	376 634

Hides and skins (Rs. 16.03 lakhs).—The trade experienced a severe depression in 1929-30 the total value registered having declined from Rs. 18.87 lakhs to Rs. 16.03 lakhs. This rather heavy set-back was due mainly to reduced consumption in the principal import countries viz., the United Kingdom, Germany and the United States of America. The average declared value for the exports showed a slight decline from Rs. 1 12 4 to Rs. 1 11 5 per lb in the case of tanned hides and skins although in the case of the raw stuff there was a nominal improvement from Rs. 0.10-4 to Rs. 0.10-9 per lb. Shipments of raw hides and skins during the year amounted to 63 100 tons valued at Rs. 7.96 lakhs as compared with 66 100 tons valued at Rs. 9.56 lakhs in the preceding year.

Oils (Rs. 72 lakhs).—Compared with the preceding year the total value of the exports of oils of all sorts in 1929-30 recorded a decline of Rs. 14 lakhs or 17 per cent and amounted to Rs. 72 lakhs. India's exports of mineral oils are usually very small, being valued at a little over a lakh of rupees a year. Exports of pig iron amounted to 369 000 tons valued at Rs. 2.59 lakhs as compared with 449,000 tons valued at Rs. 2 11 1/2 lakhs in the preceding year, 395 000 tons valued at Rs. 1 78 1/2 lakhs in 1927-28. Japan is the best customer for India although in recent times the demand for pig iron and steel in India during the past three years —

In thousand tons

Lac (Rs. 8.97 lakhs).—The exports of lac declined by 10 per cent. in quantity from 743 000 cwts. in 1928-29 to 669,000 cwts. in 1929-30 and by 19 per cent in value from Rs. 8.94 lakhs to Rs. 8.97 lakhs.

Raw Wool (Rs. 4.42 lakhs).—The export trade in raw wool, which had expanded from 50 million lbs. valued at Rs. 4.36 lakhs in 1927-28 to 56 million lbs. valued at Rs. 4.89 lakhs in 1928-29, dropped again to 50 million lbs. valued at Rs. 4.42 lakhs in 1929-30. Of the total quantity shipped the United Kingdom took 40 million lbs. and the United States of America 9 million lbs. as against 46 million lbs and 8 million lbs. in the preceding year.

	1927-28	1928-29	1929-30
Production of pig iron	1,162	1 050	1,376
steel (ingots)	600	396	591
finished steel	29	276	412

Air Routes : London-Alexandria-Karachi.

TIME TABLE OF THE JOURNEY

Just as this page was going to press a cable from London announced radical changes in the Air Mail service between England and India with effect from May 18 1931. Unfortunately very few details were available but the following table gives an approximate idea of the new timings —

Eastbound.		Cmt *	Day
London (House)	(Airways dep	07 30	Sat
Croydon	dep	08 15	
Paris (Le Bourget)	arr	10 45	
Basle	arr	14 30	
Genoa	dep	06 00	Sun
Athens	arr	p m	
Alexandria	arr	14 30	Mon
Gaza	arr	p m	
Ruthbah	arr	a m	Tues
Baghdad	arr	noon	
Basra	dep	a m	Wed
Bushire	arr	a m	
Lingeh	arr	a m	
Jaak	dep	a m	Thu
Gwadar	arr	a m	
Karachi	arr	10 05	
Delhi	arr	p m	Fri

* Gmt is Greenwich Mean Time which is kept by the clocks on the aeroplanes, and allowance must be made for local Standard Time. For example the time of arrival at Karachi (100°) Gmt is equivalent to 15 35 hours (3 35 p m) Indian Standard Time.

Westbound

With effect from May 18 1931 the westbound air mails will leave Delhi on Monday morning and Karachi on Tuesday morning and flying the foregoing route reversed will reach London on the following Sunday afternoon. No details of timings are available.

It should be noted that the section between Basle and Genoa is covered by rail over the Swiss Federal and Italian State Railways.

The fares from Karachi are as follows — to Baghdad £40 to Alexandria, £72 to London, £121. The through fare from Karachi to London allows for a weight of 100 kilos (221 pounds) per passenger and a passenger is entitled to free conveyance of luggage to the extent of the difference between his own weight and the 221 pounds mentioned above. The rate for excess luggage is just over twelve shillings per kilo. Children in arms are weighed with and carried under the same tickets as their mothers or nurses, and other children are charged full fare.

On the Indian State Air Service between Karachi and Delhi *via* Jodhpur the fare is Rs 160 and the same rule regarding baggage applies but the charge for excess baggage is naturally less.

Africa and the Far East

Since the last issue of this Year Book, several new air services which are of considerable importance to India have been inaugurated and of these the most notable is the England Africa service which connects with the England India service at Alexandria and provides an entirely new route between Delhi and Central Africa. It will be extended in the course of the present year to Cape Town.

Other important air lines recently established are the French service between Paris and Saigon and the Dutch service between Amsterdam and Batavia both of which pass through Baghdad and Karachi.

Baghdad in particular is developing rapidly in importance and it is said without reason, that it will soon become the Chatham Junction of the air. This will certainly be the case if the projected services from Persia and Russia materialise.

The proposed extension of the England-India air mail to Australia is still under discussion—a state of affairs which conceivably may be hastened by the establishment of the French and Dutch services to the Far East.

The Indian Stores Department

Current Rules of Working—The Government in 1930 under pressure from the Public Account Committee of the Legislative Assembly issued orders that the purchase of all classes of stores handled by the Department which may be obtainable in India in conformity with the rules for the supply of articles for the public service by the undermentioned department and officers should in future invariably be entrusted to the Stores Department—

Indian Posts and Telegraphs Department

Director Geological Survey of India

Chief Inspector of Mines in India

Chief Inspector of Explosives with the Government of India

Controller of Printing and Stationery India (except Printing and Stationery stores)

Controller of Patents and Designs

Director General of Observatories

Principal, Indian School of Mines

Director of Civil Aviation in India

P W D, Delhi Provinces (except special articles of furniture and fittings)

Superintending Engineer P W D, Simla and

Department of Industries and Labour Secretariat

Revised Rules to regulate the purchase of stores (other than printing and stationery stores) by all departments and officers of the Central Government and of the Provinces other than Governor's Provinces came into effect on 1 January 1931 with the object of effecting the policy of Government of making purchases of stores for the public services in such manner as to encourage the development of industries in India to the utmost possible extent consistently with economy and efficiency. They prescribe that preference in making purchases shall be given in the following order—

First to articles which are produced in India in the form of raw materials or are manufactured in India from raw materials produced in India provided that the quality is sufficiently good for the purpose

Second to articles wholly or partially manufactured in India from imported materials provided that the quality is sufficiently good for the purpose

Third, to articles of foreign manufacture held in stock in India, provided that they are of suitable type and quality requisite

Fourth to articles manufactured abroad which need to be specially imported

The new rules are expected materially to widen the scope of operations of the department. The value of the contracts entered into by the department for the supply of stores during 1929-30, the latest period for which figures are available was Rs 4,26,28,000. This was an increase of 19 per cent on the record in the preceding year despite the constant downward trend of market prices and economies effected by the extension of measures of standardisation and bulkiness of demands. The fullest possible advantage was taken of the resources of India and as a result a large quantity of new business was placed with Indian manufacturers. Textile stores bought were almost entirely of Indian origin or of Indian manufacture and there was a considerable increase in the value and proportion of engineering hardware and miscellaneous stores wholly or partly made in India. There was continued large reduction in the number and value of tenders on the London Stores Department.

The increase in the value of purchases recorded in 1929-30 was contributed principally by the following indenting authorities—

Civil departments of Central Government increase 77 per cent

Railway administrations increase 45 per cent

Indian States, increase 6.3 per cent

Quasi public bodies increase 12 per cent

Possibilities of Indian sources of supply continued to be explored and as a result 170 firms were added to the list of approved contractors. Efforts to assist manufacturers in India to improve the quality of their products by means of technical advice and suggestions were continued.

Financial Loss.—The department's accounts for 1928-29 as presented in the report for that year disclosed a deficit of Rs 4,98,733. The final accounts subsequently compiled showed the deficit to be Rs 6,92,161. The actual deficit has since been shown to have been Rs 10,61,782. The figure is larger than that for any preceding year. The percentage of working expenses was 44.5 per cent higher than in any preceding year. The department ascribes the deterioration of its position to industrial unrest.

The question of definitely declaring the department to be a commercial or service undertaking has long been under consideration of Government and they decided in January 1930 that it could not for the present be declared a commercial undertaking as some of its activities were admittedly not of a commercial character, and that it should therefore be treated as a public service department.

<i>Entry in any High Court of an Advocate or Vakil</i>	500 0	(1) <i>Sea—Where premium does not exceed rate of 2%, or $\frac{1}{2}$ per cent. of amount insured</i>	0 2
In the case of an Attorney	500 0	In any other case for Rs 1,000 or part thereof	0 1
<i>Instrument—Apprenticeship</i>	10 0	(2) <i>For time—For every Rs 1 000 or part insured not exa. 6 months</i>	0 2
Divorce	2 0	Exceeding 6 and not exceeding 12 months	0 4
Other than Will, recording an adoption or conferring or purporting to confer Authority to adopt	20 0	If drawn in duplicate for each part—Half the above rates, for Sea and Time	
<i>Lease—Where rent is fixed and no premium is paid for less than 1 year, same duty as Bond for whole amount, not more than 3 years, same as Bond for average annual rent reserved, over 3 years, same as Conveyance for consideration equal to amount or value of the average annual rent reserved, for indefinite term, same as Conveyance for a consideration equal to the amount or value of the average annual rent which would be paid or delivered for the first ten years if the lease continued so long, in perpetuity, same as Conveyance for consideration equal to one fifth of rents paid in respect of first 50 years Where there is premium and no rent, same as Conveyance for amount of premium premium with rent, same as Conveyance or amount of premium in addition to the duty which would have been payable on the lease if no fine or premium or advances had been paid or delivered.</i>		(3) <i>Fire—When the sum insured does not exceed Rs 5 000</i>	0 8
<i>Letter—Allotment of Shares</i>	0 2	In any other case	1 0
Credit	0 2	In respect of each receipt for any payment of a premium on any renewal of an original policy—One half of the duty payable in respect of the original policy in addition to the amount if any chargeable under Art 53 (Receipt)	
License	10 0	(4) <i>Accident and Sickness—Against Railway accident, valid for a single journey only</i>	0 1
<i>Memo of Association of Company—If accompanied by Articles of Association</i>	50 0	In any other case—for the maximum amount which may become payable in the case of any single accident or sickness where such amount does not exceed Rs 1,000, and also where amount exa. Rs. 1,000 for every Rs 1 000 or part	0 2
		(5) <i>Life or other Insurance not specially provided for—</i>	
		For every sum insured not exceeding Rs. 1 000 and also for every Rs 1,000 or part	0 6
		If drawn in duplicate, for each part	0 3
		Insurance by way of indemnity against liability to pay damages on account of accidents to workmen employed by or under the insurer or against liability to pay compensation under the Workmen's Compensation Act of 1923 For every Rs 100 or part payable as premium	0 1

	Rs &	Rs &
In case of a re-insurance by one Company with another— $\frac{1}{2}$ of duty payable in respect of the original insurance, but not less than 1 anna or more than 1 Rs		upon another person or against any specified property—
Policies of all classes of Insurance not included in Article 47 of Schedule 1 of Stamp Act of 1899 covering goods, merchandise, personal effects, crops and other property against loss or damage, are liable to the same duty as Policies of Fire Insurance		(a) If the amount or value of the claim does not exceed Rs. 1,000—The same duty as a Bond for such amount or value as set forth in the Release
Power of Attorney—		(b) In any other case 10 0
For the sole purpose of procuring the registration of one or more documents in relation to a single transaction or for admitting execution of one or more such documents	1 0	Respondentia Bond —The same duty as a Bond for the amount of the loss secured.
When required in suits or proceedings under the Presidency Small Causes Courts Act 1882	1 0	Security Bond —(a) When the amount secured does not exceed Rs. 1,000—The same duty as a Bond for the amount secured
Authorising 1 person or more to act in a single transaction other than that mentioned above	2 0	(b) In any other case 10 0
Authorising not more than 5 persons to act jointly and severally in more than 1 transaction, or generally	10 0	Settlement —The same duty as a Bond for the sum equal to the amount or value of the property—settled as set forth in such settlement.
Authorising more than 5 but not more than 10 persons to act	20 0	Revocation of Settlement —The same duty as a Bond for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees
When given for consideration and authorising the Attorney to sell any immovable property—The same duty as a conveyance for the amount of the consideration		Share-warrant to bearer issued under the Indian Companies Act.—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.
In any other case, for each person authorised	2 0	Shipping Order 0 1
Provisional Notes—		Surrender of Lease —When duty with which lease is chargeable does not exceed Rs 5—The duty with which such Lease is chargeable
(a) When payable on demand—		In any other case 5 0
(i) When the amount or value does not exceed Rs 250	0 1	Transfers of Shares —One half of the duty payable on a Conveyance for a consideration equal to the value of the share
(ii) When the amount or value exceeds Rs. 250 but does not exceed Rs. 1,000	0 2	Transfer of any Interest secured by a Bond, Mortgage-deed, or Policy of Insurance—If duty on such does not exceed Rs 5—The duty with which such Bond, &c., is chargeable.
(iii) In any other case	0 4	In any other case 10 0
(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand		—of any property under the Administrator General's Act 1874 Section 51 10 0
Protest of Bill or Note	2 0	—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—Five rupees or such smaller amount as may be chargeable for transfer of shares.
Protest by the Master of a Ship	2 0	Transfer of Leases by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer
Proxy	0 2	Trust, Declaration of —Same duty as a Bond for a sum equal to the amount or value of the property concerned but not exceeding 15 0
Receipt for value exc. Rs 20	0 1	Revocation of —Ditto, but not exceeding 10 0
Reconveyances of mortgaged property—		Warrant for Goods 0 8
(a) If the consideration for which the property was mortgaged does not exceed Rs. 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance.		
(b) In any other case 10 0		
Release —that is to say, any instrument whereby a person renounces a claim		

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the Indian Year Book. The Congress was founded in 1885 by Mr. Allan Octavian Hume a retired member of the Indian Civil Service and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be —

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India,

Secondly the gradual regeneration along all lines mental, moral, social and political of the nation thus evolved and

Thirdly the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focusing the chief political grievances and in providing a training ground for Indian politicians. But in 1907 the Extremists, chiefly of the Deccan and the Central Provinces who had for some time chafed under the control of the older generation succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

"The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self governing Members of the British Empire and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at

Lahore under the presidency of Babu Ambika Charan Mookundar of Faridpur in Bengal. But the union then effected was purely superficial the difference between the Moderates and the Extremists was fundamental, the Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi and his lieutenants. In 1927 the Congress actually adopted independence as the goal of India. In the following two years the Congress made what the extreme leftists described as a climb down while the Liberals moved towards the left with the result that for a time there appeared to be a commonness of purpose between the Liberals and Congressmen. Both boycotted the Statutory Commission on Indian Reforms and both collaborated in drawing up a scheme of the Dominion Status for India. Liberator of unbroken alliance continued for some months. At its 1928 Session the Congress with alacrity to Indian leaders agreed to accept Dominion Status demanded before the end of 1929. Things were moving towards a satisfactory settlement when in the latter half of 1929 the Congress insisted on the immediate grant of Dominion Status or an assurance that Dominion Status would be the basis of discussion at the Round Table Conference to be convened in England between representatives of England and the two Indies. This was the parting of the ways. The Liberals went their way and the Congress its own. In fulfillment of the ultimatum issued at its previous Session the Congress at its 1929 Session declared for complete independence or *Purna Swaraj*. Throughout the year 1930 the Congress was engaged in a distinct of the law of the land which it was hoped would help India attain complete independence. The extremist methods commanded a large measure of support in the country. Notwithstanding the proceedings of the Round Table Conference, a struggle went on in India between the Congress persistent in illegal activities and the Government endeavouring to put down lawlessness. At the time of writing these lines (early in the year 1931) negotiations are in progress between the Viceroy and Mr. Gandhi for a settlement of the political deadlock with a view to a dispassionate consideration of the scheme drawn up by the Round Table Conference and the evolution of a constitutional machinery for the future Government of India.

THE NON-CO-OPERATION MOVEMENT

It was in 1920 that Mr. Gandhi who had only in the previous year unsuccessfully started his Passive Resistance struggle as a protest against the Rowlett Act conceived his idea of non-co-operation. Originally intended to be a protest against the British policy towards Turkey the fighting of two other grievances was later on added to its first object namely, the punishment of officials in the Punjab Martial Law regime and the securing of *Swaraj* for India. Mr. Gandhi and Mr. Shaukat Ali were able in 1920 to get the Calcutta Special Congress to endorse their programme of progressive non-violent non-co-operation which was

reiterated by the annual session at Nagpur which on Mr. Gandhi's motion changed its old creed into the attainment by India of *Swaraj* by all legitimate and peaceful means. The stern measures adopted by local Governments led to the imprisonment of a large number of active Congressmen with the result that the Ahmedabad Congress in 1921 made a grim resolve to challenge the repression movement by appointing Mr. Gandhi as dictator and by resolving to start a No Tax campaign at Bardoli. The riots in Chauri Chaura in 1922 preceded by the Bombay riots in 1921 during the Prince of Wales visit see

1923 and 1924 editions of this book) opened Mr. Gandhi's eyes to the impossibility of maintaining a non-violent atmosphere under existing conditions. He suspended his proposed civil disobedience campaign, and replaced it by what is known as the Bardoli Programme which eschewed all the aggressive items of non-co-operation in favour of the promotion of inter-communal unity and khaddar. Soon after Mr. Gandhi was arrested for sedition, tried and sentenced to undergo imprisonment for six years (See 1923 and 1924 editions).

This turn of events threw cold water on the enthusiasm of non-co-operators who got discouraged. In order, therefore, to sound the country's readiness for aggressive action once more, the All India Congress Committee appointed a Committee, known as the Civil Disobedience Committee, in June 1922. This Committee toured the country and in October, 1922, produced two reports, one favouring Council entry to offer obstruction to Government and the other recommending the adoption of the Bardoli Programme. A battle royal ensued between the two parties for two or three years the Swarajists—or the Co-operators, as they were derisively called by the non-co-operators—carrying the day throughout. Every little triumph of the Swarajists meant a diminution of the prestige and influence of the Non-Changers. This went on for some time until the Belgaum session of the Congress, presided over by Mr. Gandhi himself, suspended the non-co-operation programme. Thereby the movement was practically killed and strange to say it received its death blow at the hands of the very author of its being. But the fond parent did not lose heart and bided his time. His chance came in 1928 when the Congress was split into two warring camps. One was ready to accept Dominion Status for India while the other would have nothing short of independence. At the psychological moment Mr. Gandhi staged a re-entry into the political arena—he had been but a silent spectator during the five preceding years—and professing to effect a compromise within the Congress, provided a loophole for the revival of non-co-operation. Although Dominion Status was actually declared in 1929 to be the goal of Indian political progress Mr. Gandhi insisted on having it on the spot and when that was naturally refused he returned to his old love non-co-operation and boycott. He had been biding his time, and the astute politician that he is he reintroduced in December 1929 his formula that had been dead five years. Now it was not full boycott, the ban being placed only on the legislatures, tender and water—but unfortunately, not sufficiently and wise—he exempted law courts, schools, etc., from his scheme. Complete independence was declared and non-co-operation was revived. Indeed the Congress Executive was authorised to give the signal also for a campaign of non-payment of taxes and civil disobedience. Early in 1930 the Congress executive appointed Mr. Gandhi as 'Dictator' for all India and gave him power to launch civil disobedience as and when he thought fit. This Mr. Gandhi did in March and practically the whole country was set ablaze. There was open defiance of the law all over the land

notwithstanding the efforts of the Government to put down illegal activities. (For details see 'Congress in 1930').

Congress in 1925-26.

The career of the Congress between the Belgaum session when the N. C. O. movement was suspended and the years 1920-30 when civil disobedience was revived, was comparatively dull. During the first half of 1925 the Congress policy was one of aimless drift. The death of Mr. C. R. Das demoralised the Swarajists. Mr. Gandhi promptly went to their rescue and at the end of the year the Swarajists' political programme was formally adopted by the Lawnpore Congress. The 41st session of the Congress which met in Assam during Christmas week in 1926 set its face against the acceptance of ministerialships or other offices in the gift of the Government—in other words discontinued Responsive Co-operation, a new creed which had sprung up within the Swarajist ranks—and approved of the policy of rejection of budget and refusal of supplies until a response to the national demand was forthcoming.

All this talk and quarrel about the internal affairs of the Congress were set at rest by the non-inclusion of Indians on the personnel of the Royal Commission on Indian Reforms. Most of the leaders fancied that it would be an insult to India if Indians were not appointed members of the Commission. Even moderates, reputed for their sobriety and reasonableness, affected extremism. The Viceroy endeavoured—but in vain—to explain the position to Indian leaders. (See Year Book of 1928).

Congressmen of course, met during Christmas 1927 and resolved to boycott the Simon Commission declared independence as the goal of India and offered some solutions for the Hindu-Muslim problem. In the following year the Congress in its plenary session at Calcutta declared specifically though conditionally that Dominion status would be acceptable to India. Thus it will be recalled marks a return to 1908 when soon after the Surat split it was stated that the objects of the Congress were among other things 'the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire'. This, however, proved to be a mere smoke-screen raised by Congress tacticians not excluding Mr. Gandhi to conceal from the world their real intention which was disclosed in December 1929. More about this presently.

The boycott of the Commission was a miserable failure and this reminded the Congressmen of the next duty which the 1927 session had imposed on them namely, the drafting of a Swaraj constitution for India. This they set out to do about the middle of 1928 when representatives of almost all political organisations met in Bombay at the invitation of the Congress Executive and appointed a Committee presided over by Pandit Motilal Nehru, to undertake the task.

The Committee consulted various leaders in the country and after two or three months hard labour produced a document, which however instead of being an all parties' report, evoked more controversy than any other proposal.

in recent years regarding the future of India. An All Parties Convention met at Calcutta for the purpose of receiving and considering the All Parties Committee's report. The Convention adopted the Committee's proposal that India should have the same constitutional status in the community of nations known as the British Empire as the other Dominions with a Parliament having powers to make laws for peace order and government of India and an executive responsible to that Parliament. The Convention however failed to find a solution acceptable to all for the communal question (See Year Book of 1929).

The Congress which met in Calcutta during Christmas in 1928 under the presidency of Pandit Motilal Nehru was divided into three camps, the advocates of complete independence, those who wanted Dominion status and nothing beyond that, and Pandit Motilal sandwiched between the two with one foot in either camp. This was just the opportunity for which Mr. Gandhi had apparently been waiting and he staged a come back at the psychological moment. He threw in his weight with Pandit Motilal and sponsored a compromise formula. This satisfied neither wing but eventually a resolution was adopted which approved of the Nehru Report as a great step in political advance and, whilst adhering to the Madras resolution on independence, the Congress was prepared subject to the exigencies of the political situation, to adopt the Nehru constitution, if it was accepted by the British Parliament before the expiry of 1929, and if that did not happen the Congress would resolve non-violent non-cooperation. Congressmen could in the meanwhile carry on propaganda for independence.

Everyone knew that the Congress ultimatum meant nothing. Many thought that it was only the extremist's way of demanding a recognition of India's right to Dominion Status. Pandit Motilal Nehru explaining in the Assembly the meaning of the Congress resolution said that it was an invitation to the Government to make up their minds within a year to fulfil the oft-repeated promise to put India on her legs. The Congress waited for an answer and there was a lull in the political atmosphere.

A few months later Mr. Gandhi submitted to the All India Congress Committee a scheme for organising nation-wide civil resistance and wholesale non-co-operation by enrolling a quarter of the entire population of the country in the Congress so as to build an irresistible structure the decisions of which will be felt by the Viceroy. In the words of Pandit Motilal Nehru, the Congress was preparing itself to offer non-violent non-co-operation if its demand were not conceded before the expiry of the year. He prepared for the next signal on January 1, 1930. He announced:

The political outlook was gloomy indeed and there was a clear call for a generous gesture from Britain. Lord Irwin the sympathetic Viceroy saw this and strove his utmost to placate legitimate Indian feeling. He undertook a trip to England on four months' leave and had long conversations with the India Office Chief and the newly formed Labour Cabinet of Britain. He returned in the last week of October and within a few days of his

arrival issued from Delhi a statement which has since become famous as the Viceroy's Declaration of October 31, 1929. I am authorised, he said on behalf of His Majesty's Government, to state clearly that, in their judgment, it is implicit in the Declaration of 1917 that the natural issue of India's constitutional progress as there contemplated is the attainment of Dominion Status. His Excellency announced the British Government's intention to summon a conference of representatives of British India and Indian States to discuss British Indian and All Indian problems for seeking the greatest possible measure of agreement for the final proposals to be placed before Parliament.

This statement met with mixed reception in Britain. In India it was welcomed by one and all except the extreme leftists. They sought to impose conditions on the fulfilment of which Indians would consent to participate in the proposed Round Table Conference. They issued a manifesto—this was endorsed by the Liberals as well—which besides making a few demands took it for granted that the conference is to meet not to discuss when Dominion Status is to be established but to frame a scheme of Dominion constitution for India. As far as the Liberals were concerned this was a case of hitting above the mark to hit the mark. The Congressmen, however, utilised the occasion to make impossible demands which they were sure would not be met and which, they hoped would justify them in the eyes of the world to launch a campaign of civil disobedience. Mr. Gandhi and Pandit Motilal Nehru however uttered hope of securing their demands.

Thus it was that these two leaders accompanied by Sir F. J. Habebur Sapru on behalf of the Liberals, and Mr. M. A. Jinnah in the name of Muslims waited on the Viceroy on the eve of the Congress to ascertain the Government's intentions. The Viceroy made it plain that the Conference was designed to elicit the greatest possible measure of agreement for the final proposals which it would be the duty of His Majesty's Government to submit to Parliament and that it was impossible for him or for His Majesty's Government in any way to prejudge the action of the Conference or to restrict the liberty of Parliament.

The leaders dispersed, the Congressmen went to Lahore to declare independence and the Liberals to Madras to concert measures to work the proposed scheme. The main feature of the Congress session was the reascendancy to power of Mr. Gandhi. But it was obvious that he did not have an easy time of it. The prevalence within the Congress itself of a growing element of violence was an eye-opener to him. The principal resolution however went through successfully and in fulfilment of the Calcutta Congress ultimatum. Independence was declared when the New Year was rung in and the Independence flag was hoisted.

The resolution as adopted, laid down that nothing can be gained in the existing circumstances by the Congress being represented at the proposed Round Table Conference, and in pursuance of the resolution passed at the Calcutta Congress last year, this

Congress now declares that Swaraj in the Congress creed shall now mean complete independence. Therefore, the Congress declares the Nehru scheme of Dominion Status to have lapsed and hopes that all parties in the Congress will devote their exclusive attention to the attainment of complete independence. The Congress declares a complete boycott of the central and provincial legislatures. The Congress authorises the All India Congress Committee, whenever it deems fit to launch upon a programme of civil disobedience including non-payment of taxes whether in selected areas or otherwise and under such safeguards as it may consider necessary. Here were laid the foundations of a campaign of lawlessness that threw the country into chaos in the following year.

CONGRESS IN 1930

Events moved very fast in India in 1930 which has been epochal in the country's political history. On the one hand the British Government took practical measures to devise a constitutional machinery that would place India on the highroad to responsible self-government (see Round Table Conference section) on the other the Congress the premier political organisation of the country made a bold bid for complete independence or *Purna Swaraj* a term which has been variously interpreted since the Lahore Congress. Resolutions demanding complete independence have no doubt been adopted in previous years but they have remained mere paper resolves. It was not until 1930 that attempts were made to enforce the demand. Under the guidance of Mr. Gandhi the Congress organised a series of lawless activities which the promoters and adherents of the civil disobedience movement thought would paralyse the Government and compel it to yield to the Congress terms. That of course did not happen but the movement succeeded in settling the country ablaze and infusing into the masses a new sense of national awakening and a burning desire for self-government. The author of Satyagraha took care to avoid the mistakes of 1920 and ignoring the fire sold or even the triple boycott concentrated on more spectacular items. This had great public utility value. The Government presumably anticipated that the movement would die a natural death as it did ten years ago and for a time left the agitators severely alone. But when the Congress methods began widely to be practised securing an ever increasing number of followers and when the defiance of the law led to clashes the Government had to take notice and put down with a firm hand the attempts to subvert law and order. This had a two-fold effect while it doubtless suppressed the movement to a large extent it had also paradoxically enough, the opposite effect. Thus when the Congress appeared to be nearly at the end of its tether, the Viceroy promulgated Ordinances proclaiming some of the Congress activities illegal and these very Ordinances became the object of defiance, the movement thereby got additional material to thrive upon. Repression also drove the agitation underground.

Several factors strengthened the Congress movement in 1930. The worldwide trade

crisis, of which India did not escape her share was responsible for a general feeling of depression and discontent all over the land and the people as usual blamed the Government for their sufferings. The Simon Commission's report (see Simon Commission chapter) which was not acceptable to the majority of Indians added to the prevalent want of faith in the Government's intentions. The Congress exploited this circumstance and chalked out a programme which had a wider appeal than in 1920. The N. C. O. movement ten years ago was confined to the few civil disobedience movements of 1930 appealed to the many. That was intellectual this popular. At least one of the planks of the present agitation namely non-payment of land revenue coincided with the riots usually to pay owing to falling commodity prices. The breach of the Salt Act (boycott of all foreign cloth and of British goods) and the non-tax campaign were easier to practice than the boycott of law courts and schools. On the present occasion the Congress campaign arranged its field efficiently. Mr. Gandhi who was appointed Dictator in chief of the Congress nominated provincial dictators who feared not to be succeeded by their respective nominees. Small committees of action, known as War Councils were set up throughout the land ready to launch the campaign. The leader gave the word in April by himself breaking the salt law and people followed his example in several places. When this went on for some time the police had forcibly to disperse the people engaged in illicit salt manufacture which led to numerous casualties. And as these demonstrations were staged in public places they produced great excitement in popular mind. Thousands of arrests were made and jails all over the country were flooded over 14,000 were convicted in the year for offences connected with civil disobedience. People lost their fear for the Indian nor did they hesitate to go to jail. Youths women and children threw themselves into the movement thereby lending colour to it and attracting international attention. Prabhat Phule or religious and political processions were taken out through public streets singing Congress songs and broadcasting revolutionary doctrines. Demonstrations leading to breaches of the peace were suppressed by the police which led to further demonstrations and clashes. Some of these as in Sholapur, Jawahar and Chinnar took a very serious turn. Great shattered confidence and credit and trade and commerce were paralysed. Import and export figures and railway returns recorded a steady downward trend. Towards the end of the year a visit to the deolock caused in which people went on breaking laws and the Government continued to suppress their activities while the British Government was striving hard with the help of right-thinking and sober-minded Indian leaders to evolve a formula on which to base the future constitution of India.

Mr. Gandhi occupied the greater part of the day in 1930. India was good news in Europe and more so in America where journalists splashed Gandhi. This was his final struggle he declared and he would not return to his Ashram at Sabarmati if he failed to win Swaraj for India in his own words he had burnt

his boats and set out on the famous march on foot from Ahmedabad to Dandi where he inaugurated his net movement. He had the satisfaction of seeing a large number of people following his lead but after his arrest at Mumbai on March 12 the movement ceased to be non-violent.

Civil Disobedience Movement

In pursuance of the resolution of the Lahore Congress it was decided by the Congress leaders early in the year to test the strength and willingness of the country to undertake and carry on a programme involving loss suffering and sacrifice and with this end in view they organised what has since been called the Independence Day demonstration. On January 26 1931 at a given time all Congress organisations in the land were asked to hold meetings and to read out a specially worded resolution for adoption by the public. The resolution declared that economically politically culturally and spiritually the present Government had been a curse to India. The most effective way of gaining freedom was not through violence. The people were therefore asked to prepare themselves by withdrawing so far as they could all voluntary association from the British Government to prepare themselves for civil disobedience including non-payment of taxes and to carry out the instructions to be issued by the Congress from time to time for the purpose of defying British Tyranny. Several The response to this appeal according to the Congress leaders exceeded anticipations. Having thus ventilated the new revolutionary policy of the Lahore Congress and satisfied themselves that their methods would obtain general support in the country the Working Committee appointed at Lahore met at Ahmedabad and decided to inaugurate mass civil disobedience. It appointed Mr Gandhi as the Dictator of the Congress and gave him full powers to launch conduct and carry out the movement.

Before taking what he described as his final plunge in politics Mr Gandhi wrote in the first week of March his famous letter to the Viceroy. Addressing His Excellency as My dear friend Mr Gandhi announced in that letter his determination to inaugurate on March 11 his campaign of civil disobedience. He declared that he regarded the British rule in India as a curse and considered that the country had been ruined and the people reduced to a condition of helpless political servitude by continuous exploitation and an expensive civil and military administration. Dominion status he feared would never be granted to India by the British since it would adversely affect British commerce with India and British interests in India. It was no longer a question of argument; it was one of matching of forces. India by non-violence must evolve a force sufficient to wrest her independence from the unwilling hands of Britain. To this letter Mr Gandhi got a reply from Lord Irwin's private secretary communicating His Excellency's regret to learn that Mr Gandhi contemplated a course of action which was clearly bound to involve violation of the law and danger to the public peace.

The demands made by Mr Gandhi were such that they could not be conceded. They

were the famous eleven Points of Mr Gandhi - total prohibition reduction of the sugar ratio to 14 50, reduction of the land revenue to at least 50 per cent and making it subject to legislative control abolition of the salt tax reduction of the military expenditure to at least 50 per cent to begin with reduction of the salaries of the higher grade service men to one half or less so as to suit the reduced revenue protective tariff on foreign cloth the passage of the Coastal Trade Reservation Bill discharge of all political prisoners withdrawal of all political prosecutions abrogation of section 124-A of the Regulation of 1818 and the like and permission to all Indian princes to return the abolition of the C I P or its popular control and the issue of licenses to use fire-arms for self-defence subject to popular control.

When his impossible demands were turned down Mr Gandhi outlined a programme of civil disobedience consisting of various items calculated to subvert the Government by breaking certain laws raising the income from excise and customs duties including Government servants to resign picketing liquor shops and shops dealing in foreign particularly British goods mainly British cloth and urging the masses not to pay land revenue chowkidari tax and forest grazing fees. The salt Act was the first target.

After organising his forces in various centres in the country Mr Gandhi inaugurated his civil disobedience movement by setting out on a march on foot from his Ashram at Sabarmati with the object of breaking the salt law and defying the Government. He was accompanied by a band of 80 trusted inmates of his Ashram who had taken a vow to obey his orders and to share with him the consequences of breaking the law. Many hundreds more offered to join his party but he wished to take only a select crew in whose discipline training and steadfastness he had confidence. Similar parties were formed in other parts of the country and were waiting for the word from Mr Gandhi. The Dictator set out on the morning of March 12 and marched through Gujarat making halts en route. This part of the country where most men women and children regarded him as an avenger (Incarnation of Dety) thanks to the propaganda of Mr Vallabhbhai Patel, was only too ready to accept his advice. At each one of the halting places a number of Government servants announced their resignations. The people were urged to look out for his signal and carry on the fight even if he was arrested. At the end of three weeks he reached Dandi, a village on the coast near Surat and on April 6 the fateful day on which the movement was really initiated he picked up salt on the sea shore without paying duty. The police did not interfere. His followers started manufacturing salt by heating sea water and the salt so manufactured was sold in small packets all over the country. This was the signal for Congressmen to break the law all over the country simultaneously.

On the first few occasions the Government merely looked on but the law breaking fever spread fast and wide. Eventually the authorities took measures to prevent the manufacture

and sale of illicit salt. They were resisted by Congress volunteers who formed a cordon round the spot where salt was made and defied the police to arrest them. The police arrested them at first, but they could not obviously arrest hundreds of spectators who, though not actually engaged in salt making, were encouraging the law breakers, jeering at the police and indulging in hostile demonstrations. When these crowds began to indulge in violence against the police, the latter had perforce to disperse them by means of the regulation staff known as *lathi*. This went on for a while without bringing Purna Swaraj any nearer. Mr. Gandhi found a way out of the rut by declaring that he proposed to raid the salt works at Dharasana near Surat. Similar raids were planned on the salt depot at Wadala, in Bombay. Shortly after this, however, Mr. Gandhi was arrested under the provisions of a century-old Regulation and confined during the pleasure of the Government as a state prisoner whose activities were a danger to the Government established by law.

His arrest and incarceration in Yeravdi to some extent intensified the movement. His place was taken by Mr. Abbas Tyabji and later by Mrs. Sarojini Naidu who became Gandhi No. 2 and Gandhi No. 3 respectively. The projected raids on the salt works at Dharasana and Wadala were carried out repeatedly and hundreds were injured when the police repelled the raid and dispersed the raiders and sympathisers. The advent of the monsoon put an end to salt making and salt depot raids. But other illegal activities were taken up.

The anniversary of a dead leader (Gandhi Day), Independence Day or some such pretext was utilised to organise anti-Government demonstrations. The arrest of persons who were courting arrest was also the occasion for a display of hostility against the Government. Such disturbances occurred in several places, and the police had to impose a ban on meetings, processions, demonstrations and the like which invariably disturbed the public peace and led to clashes. Even these prohibitory orders were disobeyed thereby compelling the police to use force. Two such instances occurred in Sholapur and Peshawar. In the former place the police were attacked constabulary, mobbed and murdered in broad daylight, and Government buildings and law courts set on fire. Martial law was introduced and quiet restored after a long time. In Peshawar also rowdy crowds defied the police and even the military. British troops were stoned. People were so much inflamed that it took a number of weeks for the return of normal conditions. It was revealed during the Peshawar disturbances that the Congress propaganda had to some extent interfered with the discipline of a few Indian sepoys.

Nor did the Congress stop here. Thanks to its persistent propaganda the martial races inhabiting the border were taught to hate the British and to expect the establishment of Gandhi Raj at an early date. A belief that the British administration was weakening spread across the border to the Afghans who carried out a series of raids on Peshawar. Not

that these were by any means successful, they were easily repelled and severely punished. But it would not do to allow them to continue in the false belief that they could defy the British Government with impunity. The Government, therefore, took prompt punitive measures and put an end to the raids.

Congressmen living in inland areas stirred up villagers against the Government and persuaded them to refuse to pay dues for grazing cattle in the forests. Forest regulations were broken. That the Congress was playing with fire became evident at least in one place. Turbulent hill men inhabiting Chitrur in Bombay Presidency did not—and it must have been obvious, could not—understand the subtleties of non-violence. When they became inflamed against the Government they behaved very violently. A police party that went to subdue them was attacked.

In the U. P. and Bengal ryots refused to pay the chowkidari tax. This mass movement led to mass arrests of hundreds of Satyagrahis and the object of the Congress in flooding the jails was in a large measure successfully achieved.

Gujarat, where Mr. Gandhi's influence was greatest, was the stronghold of the movement for non-payment of land revenue. In all the four districts of Gujarat ryots were persuaded to withhold payment of arrears of the previous years and later on, of the instalments of the following year. The greatest support to this campaign came from two talukas Bardoli and Borad. Here the agricultural population migrated from their villages to the adjoining villages of the Indian State of Baroda. They also carried with them all their moveable property including crops which they had reaped without the knowledge of the authorities. In some places rather than pay the land revenue the ryots set fire to standing crops. The revenue officials at first adopted all the measures provided by the Land Revenue Code for the collection of land revenue but when these failed the aid of a special battalion of police called the Kitchener Police was taken to enforce payment.

The no-tax campaign and the seditious appeals calculated to disturb the loyalty of the police and the troops could not be allowed to continue. Similarly, the authorities could not look on when Government servants in Gujarat who refused to resign their posts in obedience to the Congress mandate were subjected to countless hardships in the shape not only of social boycott but also refusal of daily supplies and even of water. In several instances Government servants were coerced and prevented from doing their duty—things were made so hot for them. The activities of the Congress in other spheres also became too mischievous to be tolerated any longer and the Viceroy issued a series of Ordinances. One of these gave power to the Government to confiscate the premises of Congress offices whence baneful doctrines emanated. Refusal of normal supplies and services to Government servants was also made an offence. Later in the year all the Congress and allied bodies were declared unlawful.

ful associations under another Ordinance. Under this Ordinance a number of Congress leaders were arrested and Congress offices confiscated but new War Councils sprang into being and continued to court arrest by defying orders prohibiting meetings, processions, Congress flag salutations, etc. These activities were, however, confined to the Bombay Presidency.

One of the main objects of the Congress was to deplete the Government treasury by attacking the excise and customs revenue. Excise was the main source of revenue to most provinces and customs to the central government. It was also intended seriously to affect British industry, particularly the Lancashire textile trade. For this purpose systematic picketing of liquor and foreign (especially British) cloth shops was resorted to. This work was reserved for the large number of women who for the first time in the history of politics in India joined the movement in response to Mr. Gandhi's appeal. Mr. Gandhi was also fortunate in securing the wholehearted support of the commercial community in the Presidency towns, not especially in Bombay who had a series of grievances against the Government of India economic and currency policy. Indian merchants entered into solemn agreements not to send any orders for foreign cloth in the first instance and later on for several articles of British manufacture. This willing co-operation of the commercial community made the task of the women pickets somewhat easy but in several cases coercion replaced peaceful persuasion and the consuming public were put to untold hardships. The Viceroy issued an Ordinance making picketing accompanied by intimidation or coercion punishable. This part of the movement assumed large proportions all over the country and as the year advanced the figures of imports from England, especially of cloth, showed a marked decrease. The trade of Lancashire was hit hard and unemployment figures rose in England.

The strongest ally of Mr. Gandhi in the spread of the civil disobedience movement was the Indian press, especially the vernacular press. During the year numerous vernacular sheets came into existence which carried Congress propaganda to every nook and corner of the country and to almost all the villages in the land. The Viceroy at first revived the Press Act by means of an Ordinance, but when this did not have the desired effect he promulgated the *Unauthorized News-sheets Ordinance*. This Ordinance helped to suppress seditious propaganda generally but in Bombay city the Congress continued to issue daily a one page bulletin, despite vigorous efforts by the police to put an end to it.

According to the strict theory of Mr. Gandhi, non-violence was the sheet anchor of the movement, but when clashes occurred repeatedly in hundreds of places between the police and some times the military on the one hand, and large masses of determined and desperate men and women on the other, it was inevitable that violence should break out. The happenings in Sholapur and Poeshawar have already been referred to. In most cases the police used only the least, but when they were overwhelmed

they had to resort to firing. A large number of people were injured or killed in these clashes. At first Mr. Gandhi (before his arrest) complained against the violence of the police, but there were cases in which infuriated mobs took the initiative by throwing stones and other missiles at the police, and thereby invited more violence on the part of the authorities. On the whole the police carried out their duties loyally, conscientiously and efficiently displaying extraordinary patience in face of great provocation. In spite of public odium and obloquy they put in extra work and richly deserved the numerous tributes paid to them.

While, as has already been noticed, the participation of the commercial community and of women was a feature of the agitation in 1930, no less significant was its effect on and the response of the younger generation. Young boys were organised into *Vanar Senas* (Monkey Armies) and by their demonstrations they lent a comic touch to the grim struggle. Although they did not alter the course or speed of the movement one cannot fail to notice the baneful impression that this movement must have left on their immature minds. Older boys and youths were similarly influenced. Being young and impulsive, the energies of some of them were turned into revolutionary channels. The year has witnessed a large number of revolutionary outrages. In many of which bombs and fire arms were used. Police officers were killed and an attempt was made to assassinate the Governor of the Punjab. An armed raid was made on the Jhatingang armoury. Many displaced their ink-bots but the mischief had been done.

And all this turned the Government did not forget their duty of implementing the declaration made by the Viceroy on October 31, 1929. The work of preparing for the **Round Table Conference** was carried on vigorously. All difficulties were surmounted, except one—the refusal of the Congress to co-operate. Notwithstanding the harmful effects produced by the civil disobedience movement, the Government were ready to welcome the co-operation of the Congress leader in settling the future constitution of India. With this end in view the Viceroy permitted Sir Tej Bahadur Sapru and Mr. M. R. Jayakar to discuss with Mr. Gandhi and other Congress leaders in jail the possibility of the Congress sending a delegation to the London Conference. The conversations proceeded on the basis of a statement made to a British journalist by Mr. Gandhi and Pandit Motilal Nehru. Pandit Nehru offered Congress co-operation in the R. I. C. if it was made clear that the Conference would meet to frame a constitution for a free India subject to such adjustments of our mutual relations as are required by the special needs and conditions of India and our past association. Mr. Gandhi consented to reduce his *Eleven Points to four*, namely (1) the terms of reference of the R. I. C. to include the framing of a constitution giving India the substance of independence, (2) repeal of the salt tax, prohibition of liquor and a ban on foreign cloth, (3) amnesty for political prisoners, and (4) the remaining seven points to be left for future discussion. It was plain that the Congress demand regarding the purpose of

the R. T. (could not be conceived and the prison talks fell through. The Congress confined its activities and the Government continued to suppress them—the deadlock continued

Meanwhile the Round Table Conference met in London and made great progress. Congress leaders pretended to be unconcerned but watched the proceedings in London with keen interest

The National Liberal Federation.

The definite breach between the moderate and extremist elements in the Congress at its special session in Bombay in August 1918 (*vide* 1919 edition of this book) witnessed the birth of the National Liberal Federation which has since then, been the platform of Indian moderate leaders. It held its first session in Bombay in 1918 Sir Surendranath Banerjee presiding. The Federation adopted for its creed the old Congress formula which was set aside by the Nagpur Congress

Those who had held the Federation in high esteem for its moderation sobriety and balanced judgment suffered a rude shock in 1927 when the Liberal body and its leading lights proved the saying. If you scratch a Liberal you will find an extremist. Liberal leaders bade good bye to their avowed principle of co-operation with the Government when they expressed them selves in favour of a boycott of the Royal Commission on Indian Reforms on the ground that there was no Indian on it.

Thenceforward Liberal politics became negative and barren and leaders who had enjoyed a reputation for sane thinking came to be regarded as the wild men of the Congress. Boycott was the breath of their nostrils although they were declaring now and then that the door was still open for Government to make a gesture of co-operation. Their moribund stagnation was however slightly relieved by the efforts at constitution making undertaken at the instance of the Congress. Liberals heartily co-operated in this endeavour and attended the All Parties Conference summoned by the Congress in the middle of the year. Sir Tej Bahadur Sapru, President of the Liberal Federation, consented to serve on the Committee appointed by the Conference to draft a constitution for India. After months of toil the Committee produced a constitution according to which India would enjoy the status of the Dominions of the British Empire. The report also offered a solution for the communal dissensions and a formula to govern the relations between British India and the Indian States. It was in a sense a Liberal document for the Liberals were the only group of men in the country who unanimously and unreservedly accepted the entire report.

The plea for the grant of Dominion Status was very strongly urged by Sir Chimanlal Bhatvala, President of the 1928 Session of the Liberal Federation who said that the trusteeship of Pundland was coming to an end. British had to deal with a people who had attained majority and were demanding from the so-called trustees their property and also asking for accounts. The British must change their mentality and must realise the feeling that was growing in the country, which if not guided properly

would swallow everything. It will swallow Dominion Status and even British connection and British trade. If Government does not heed our voice and take our modest counsel into consideration Heaven only know what the consequences will be. This firm attitude on the part of the Liberals whom Government were not slow to recognise as their allies served to hasten the advent of a new era. The changing political situation was exhaustively reviewed at personal interviews between the British Cabinet and the India Office and Lord Irwin who had gone home on four months leave. As a result of these conversations the Viceroy made soon after his return from leave what is now famous as the Proclamation of October 31 1929. (For details see Congress section)

Now the Liberals had what they wanted. And they responded. Principal Congress Liberal and Muslim leaders waited on the Viceroy. The Congress Party demanded an assurance that Dominion Status would be granted before it could agree to participate in the Round Table Conference. What the Liberal spokesmen urged at this Conference is not definitely known but it seems fairly clear that no condition precedent to Liberals co-operation was sought to be imposed.

By the time the Liberals foregathered at Madras things had moved pretty rapidly in Congress circles. The failure of the leaders conference with the Viceroy led Congressmen to talk of severance of British connection civil disobedience and other wild schemes. This development was the signal for the Liberals to break away from the extremists. Once again the Liberals expressed disapproval of Congress methods. Sir Phiroze Sethna who presided denounced the movement which aimed at the severance of India's connection with the Empire and opposed the campaign of civil disobedience and non payment of taxes, as they were detrimental to the country's interests and would plunge the country into open conflict with the Government who would then be justified in taking every measure to put them down. The Federation resolved to participate in the Round Table Conference and welcomed the Viceroy's announcement.

Liberal Activities in 1930. The Liberal Party leaders had a busy time of it throughout the year 1930. They had on the one hand to set their faces against the civil disobedience movement conducted by the Congress and on the other to prepare a strong case for Indian Reforms such as would withstand the attack of diehards in Britain. During the year under review, the Liberal Party organised a number of committees for preparing the material on several questions which were to be the subject

matter of discussion at the Round Table Conference. One of these was entrusted with the task of arriving at a settlement over the rights of the minorities in the future constitution. Meetings of these committees and of the All India Council of the Liberal Federation were held in the month of May in Bombay where representatives of the leading minorities of India assembled. Various aspects of the proposed constitution for India were considered and differences on the question of adjusting the rights of the minorities were threshed out and reduced to a minimum.

Among the British Indian Delegation to the Round Table Conference the Liberal Party had a large representation consisting of twelve members out of 57. These members played a very important part on the various committees of the Conference in London. Two among them mainly, Sir Tej Bahadur Sapru and the Hon. V. S. Sastri were mainly responsible for guiding and directing the proposals of the Indian Delegation which ultimately formed the basis of agreement at the Conference. On the communal question also the Liberal Delegation strove hard to conciliate the claims of the different minorities and all but succeeded in solving this difficult problem.

In India the attitude of the Liberal Party towards the civil disobedience movement was one of disapproval but the Party spared no effort to interpret the inner meaning of the movement and explain to the Government its origin and the forces underlying it. On several occasions the Party also disapproved the measures adopted by the Government to deal with the lawless activities in the land and expressed the opinion that such steps only made the disease worse. In short the Liberal Party assumed the role of true interpreters between the Government and the people and did their best to bring about a reconciliation between them.

The annual session of the Liberal Federation during Christmas had to be postponed owing to the absence of many of its leaders in London and owing to the fact that the discussions at the Round Table Conference had not concluded by then.

Indian Round Table Conference

After the failure of the Simon Commission to receive adequate support during their two journeys to India the Government both in England and in India devised a Round Table Conference. As far back as 1924 the late Pandit Motilal Nehru, in moving his resolution on the 'national demand' in the Legislative Assembly proposed that a Round Table Conference should be organised for settling the scheme of reforms for India. The suggestion was turned down by the then Home Member Sir Malcolm Hailey and the plan of the Simon Commission was put forward in its stead. But it was the presence of the Labour Government in England and the sagacity and statesmanship of Lord Irwin that were responsible for reviving the plan suggested

by the late leader of the Opposition in order to obtain contact with the newer elements in the country who believe in constitutional progress and in the method of negotiation rather than of direct action.

The scheme of the Conference was announced in November 1929 but owing mainly to the prolonged sittings of the Imperial Conference the actual summoning of the Indian Conference was delayed by about twelve months. The Congress exploited this delay and in the interval carried on a systematic and ceaseless campaign of ridicule and poisoned the Indian mind against the Conference. This however, did not deter believers in constitutionalism from attending the Conference in spite of the public odium and obloquy they incurred thereby.

Before the delegates left for London an attempt was made with the ready consent of the Viceroy to induce Mr. Gandhi the Nehrus and other Congress leaders to participate in the Conference. Sir Tej Bahadur Sapru and Mr. M. K. Jayakar saw the leaders in jail in Yeravda and Yaml and numerous consultations were held but to no purpose. The Congress leaders insisted among other things on a prior declaration of what the Conference should do, a demand which could not be considered in the light of the repeated announcements that the Conference would be entirely free to do what it liked.

The Conference therefore met in London in November with out the Congress being represented thereon. It began under exultant auspices His Majesty the King Emperor declared it open and expressed the hope that the Conference would lay the true foundation of self-government for India based on a fusion of the divergent claims into mutual obligations. The Premier who presided expressed his determination to solve the Indian problem. At an early stage in the Conference the Indian Princess responded to the invitation of Sir Tej Bahadur Sapru to join an All India Federation. This was the main factor which contributed to the satisfactory achievement of the largest measure of agreement on the scheme which emerged from the deliberations of the Conference—namely an All India Federation with responsible government in the centre and with certain safeguards during the period of transition between now and the establishment of a fully self governing unit of the Empire.

Details of this scheme were not settled until after the year 1930 had expired. The Conference dispersed for the Christmas holidays after holding preliminary sessions settling the main outline and appointing several sub-committees to report on a number of heads of reform, the structure of the Federation, the constitution of the various legislatures, defence, franchise, protection to minorities, the separation of Burma, the formation of Sind as a separate province, etc. None of these committees had submitted its recommendations before the end of the year.

The Moslem League.

The All India Moslem League came into being in 1904 out of the universal desire among leading Mussalmans at that time for an effective organisation to protect their communal interests. With a view to secure separate Muslim representation in the legislative bodies of the and under the Minto Morley scheme of constitutional reforms then under discussion Indian Muslims who had been hitherto keeping aloof from politics organised the League. Its original objects were the promotion of loyalty to British Government, the protection of political and other rights of Mussalmans and to place their needs and aspirations before Government in temperate language and to promote inter-communal unity without prejudice to the other objects of the League. Muslim opinion slowly advanced and in 1913 the securing of self government within the British Empire was included in the objects. The League was a powerful and influential body in 1916 and 1917, and what is known as the Lucknow pact of communal representation arrived at between the League and the Congress in 1916 was bodily incorporated in the Government of India Act 1919. The birth of the Khilafat Committee however overshadowed the League which from 1919 had almost disappeared till April 1922 when it met for a brief period under the presidency of the late Mr Bhargava but had to be adjourned for want of a quorum. In 1924 however, some influential Moslem leaders like Mr M. A. Jinnah thought that the Khilafat Committee's functions having ceased in view of the Turkish deposition of the Khalifa decided to revive the League which met under Mr Jinnah's chairmanship at Lahore in May 1924. The Lahore session practically did nothing else save to reorganise the scattered branches of the League. The reconstructed League commanded comparatively less influence. And what little authority it exercised disappeared with the formation in 1928 of the All Parties Muslim Conference. This latter body was representative of the Muslim masses as well as classes in the sense that the Muslim League was not. This explains why the Conference is gradually, but none the less surely, replacing the League as the premier Muslim representative body in the country. During the past few months however, neither body has commanded anything like its former influence. In a sense their place has been taken up by eminent leaders like the Aga Khan the late Mr Mahomed Ali, Mr Jinnah and Sir Mahomed Shafi. They effectively and truly represented the bulk of Muslim opinion without an intermediary organisation like the League or the Conference.

The League in 1923-29—The 1925 and 1926 sessions of the League were noted for their virility. The Muslims displayed greater allegiance to their communal organisation in proportion to the loyalty of the Hindus to their Maha Sabha. Suspicion and distrust, enmity and open hostility began to prevail between the two communities. Proportionate distribution of the loaves and fishes of office, on the political side, and the questions of the Hindus playing

music before mosques and the Mahomedans killing cows, on the religious side, constituted the points of difference which frequently led to inter-communal riots. The situation was regarded with grave concern by serious minded leaders, some of whom under the leadership of Mr Jinnah, met at Delhi early in 1927 and offered, in the name of the Muslims, to surrender their right to communal electorates, provided, among other things, Hind was constituted into a separate province and reforms were introduced in the N. W. Frontier Provinces and Baluchistan. This offer however was acceptable neither to the Hindus nor the Muslim masses who insisted on the continuance of the separate electorates. A schism set in the Muslim League which was accentuated by the announcement of the personnel of the Statutory Commission on Indian Reforms. The non inclusion of Indians on the Commission was construed by a certain section of the Muslims as an insult to India and those who held this view decided to boycott the Commission. The majority of the community however thought otherwise. The gulf between the two sections widened during 1928 despite efforts to bring about a reconciliation. While persons who happened to hold the leadership of the two sections were quarrelling among themselves, those who had the interests of the community at heart strove to form a body outside the League. Scenes of uproar and confusion marked the proceedings of the Council of the League which commenced in Delhi in March 1929. The trouble started with an attempt to get the League Council to endorse the Nehru Report which was obnoxious to a very large section of Muslims. This session besides provoking the remark from a prominent leader that the Muslim League is deluded and so are the Nehru Report and the Congress served to strengthen the new organisation the All Parties Muslim Conference. Refusing to walk into Mr Jinnah's snare the supporters of the All Parties Muslim Conference were engrossed in their constructive work. They were joined by the members of the Shafi section of the League who had come to Delhi in the hope of making up their differences with the Jinnah group but who were sadly disillusioned.

The All Parties Muslim Conference.—The publication of the Nehru Report hastened the advent of the All Parties Muslim Conference. As one of the speakers remarked, every provision of the report meant some disadvantage to the Muslims and some advantage to the Hindus. The Conference was called in 1928 to counteract the effect of the Nehru Report and to formulate the Muslim community's demand in regard to the future constitution of India. Notwithstanding the refusal of the Jinnah Leaguers to participate in the proceedings the Conference was attended by almost all the prominent Muslim leaders of the country, including a very large number of the members of the Councils and the Assembly. There was ready agreement on the unsuitability of the Nehru Report, but difference of opinion prevailed with regard to the goal of India. Persons like Mr Mahomed Ali

stood for complete independence and, of course, for the boycott of the Commission while Sir Mahomed Shafi, who had a very large following, favoured co-operation with the Commission in the framing of a constitution within the Empire. Things were a gloomy aspect for a while, but thanks mainly to the tact of the President the Aga Khan a compromise was reached whereby the mention either of Dominion status or Independence was omitted from the resolution put before the Conference which demanded merely a federal constitution. Similarly it referred neither to the Simon Commission nor to the Nehru Report but insisted on compliance with the demands of the Conference by any agency which devised a constitution.

The success of this Conference dealt a serious blow at the League which was already losing its hold on the community. The Conference became the rallying point of the sane and serious-minded section of Muslims. It was bent upon safeguarding the rights of Muslims.

Muslim Activities in 1930—Unlike the Congress, the Muslim political organisations are known for their lethargy except during the week when their annual meetings are held. In 1930, however, they displayed unusual activity. This is no doubt due to the summoning of the Round Table Conference to settle the basis of India's future constitution. Unattracted by the negative but spectacular programme of the Congress the majority of the Muslims appreciated the danger of allowing their case to go by default at the momentous London Conference and took a lively interest in its work before and during its proceedings. Repeated attempts were made throughout the year particularly during the latter half to bring Indian Muslim leaders together for ventilating the community's demands. The credit for this useful activity goes to the All India Muslim Conference, the Muslim League remaining practically inert. In July the Executive Board of the All Parties Muslim Conference met at Simla and formulated the community's demands. The Simon Report was examined and rejected but the Round Table Conference was welcomed. Those Muslims who had formerly shouted the slogan "Swaraaj if possible with British connec-

tion and without it if necessary" found in the R. T. C. offer the British hand of friendship. Shortly after the opening of the Round Table Conference the All Parties Muslim Conference met at Lucknow and reiterated what have come to be known as Mr Jinnah's Fourteen Points which demand a series of provisions calculated to protect the community against possible Hindu aggression. The more important of the Fourteen Points are federal constitution with residuary powers vested in the provinces; uniform provincial autonomy; effective representation for minorities in all provincial legislatures; one-third representation for Muslims in the Central Legislature; guarantee against a disturbance of the Muslim majority in the Punjab, Bengal, the N-W Frontier Province; full religious liberty; no prejudicial communal legislation except under certain conditions; share for Muslims in the cabinet and the services reforms for the N.W.F.P. and Baluchistan; separation of Hind; protection of Muslim culture and insistence on separate electorates unless the above points are conceded. These demands were affirmed and re-affirmed throughout the year some leaders going to the length of rejecting joint electorates for the present whatever the inducement. The Hindus seemed in no mood to concede their demands. The Congress persisted in its civil disobedience campaign paying little heed to the Muslim desire to settle the communal problem before fighting the Government. The Hindu delegates in London did not allay Muslim fears—these factors produced among the Muslim a frame of mind which found expression in the presidential address delivered by Sir Muhammad Iqbal at Allahabad towards the end of the year. Typifying the prevalent Muslim exasperation, Sir Muhammad demanded the formation of a Muslim State in the North West, comprising Sind, the Punjab and the N.W. Frontier Province, within the State of India. Such a state would afford a permanent solution of the communal problem, he said and averred that the cultural development of the community demanded it. The session of the League made a firm declaration that no constitution devised for the future of India would be acceptable to the Muslims unless their "rights were adequately safeguarded."

The Khilafat Committee.

The Central Khilafat Committee owed its origin to the references shown by the All India Congress Committee in 1920 to the question of the Khilafat and Non-co operation. Messrs Gandhi and Shaukat Ali started this organisation with a view to educative propaganda throughout the country and if possible, to capture the Congress. The object of the Committee was stated to be the righting of the Khilafat "wrongs". As a result of intensive propaganda mainly led by Mr Gandhi himself, prominent Indian publicists supported the view that the Indian Moslems being deeply concerned over the exploitation of the Holy places of Islam, had a right to expect the Hindus to help them in securing their rights. Soon after the Madras Khilafat Conference under the chairmanship of Mr Shaukat Ali unfolded a programme of progressive non-cooperation and appealed to the country for support. The Khilafat Committee, with the huge funds at its disposal, was able to draft in a large number of delegates to the Calcutta special Congress in 1920 when the non-co operation programme was accepted by that body. With two more objects added to it, namely the obtaining of Swaraj and the righting of the Panjab wrongs.

With the deposition of the Khalifa by the Kemalists and the revival of the Moslem League the Committee's activities have been considerably restricted. Recently the Committee sent a deputation to Noida to intervene and settle the dispute between the warring elements. Though the Government of India were willing to permit a deputation of the Committee to Turkey, the Turkish Government did not quite like the idea which had consequently to be abandoned.

The 1925 session of the Khilafat Conference was rendered lively by Mr Hasrat Mohani whose speech strongly criticised Sultan Ibro Saud and was subsequently expunged. The resolution adopted by the conference under the Presidency of Mr Abdul Kalam Azad condemned the British policy in Iraq and the League's decision on Mosul and declared that if the Turks went to war on the latter issue the Conference would deem it its duty to help them.

Since then one heard little about the public activities of the Committee, although many of its domestic quarrels engaged the attention of the public. Funds, however, continued to be collected for the activities of the Committee which could hardly be specified. Things dragged on until the latter half of 1927, when the leaders found the Khilafat organisation a useful tool for purposes of their propaganda for boycotting the Statutory Commission on Indian Reforms. This was successfully achieved by the extremist wire pullers at Madras in 1927.

In the next year, however, a peculiar situation arose as the result of the publication of the Nehru Report. This document raised many controversial issues. Its two main recommenda-

tions, namely Dominion status for India and joint electorates with temporary reservation of seats, were not acceptable to the Khilafatists whose ideal was an extreme type of nationalism coupled with rank communalism. They wanted complete independence for India and in the same breath demanded the continuance of separate electorates. This state of mind found expression at the annual session of the Khilafat Conference which met in 1928 at Calcutta.

There is nothing noteworthy to record about the political activities of the Khilafat during 1929. The annual session of the Conference was held at Lahore as a kind of show to the Congress. Nawab Ismail Khan presided and urged the summoning of a conference of Indians to settle communal and other questions. The curious thing about this session was that it flew hot and cold in the same breath. It revolved upon independence for India including severance of the British connection but at the same time decided to participate in the Round Table Conference to be convened by the British Government to settle the future constitution for India. While the latter reflected the true state of feeling among the Mussalmans of the country the former was obviously a wordy sop to the Congress extremists in the Conference.

More than ever before the Central Khilafat Committee ceased to be a political organisation in 1930. Its activities in the past year were mainly cultural, social and religious. True, its leaders indulged in activities which were regarded by some as part of a ruse for pan-Islamism but there does not seem to be any political object in view. Outside India the Committee kept itself in touch with similar organisations in Cairo, Palestine, Damascus etc. with a view to promoting unity among Muslims encouraging Muslim trade and industries and generally enhancing their well being. The late Maulana Mahomed Ali and his brother visited foreign Islamic countries with the object of organising a world *tanzim* with Jerusalem as its headquarters for the religious, social and cultural advancement of Mohammedans and for the protection of their holy places. Internally the Committee concentrated on constructive work. It approached the Government for the appointment of the Haj Inquiry Committee. It rendered great services to the pilgrims by giving facilities for their journey, supplying them with information and literature concerning the holy places and attending to their comforts in countless other ways. A number of night schools were established in Bangalore, Delhi, Bombay, and other places for the education of the adults of the community. In Bombay, alone there are 30 night schools. The Committee also organised a volunteer corps with 5,000 regulars. They made themselves useful in maintaining order at public meetings, processions, demonstrations etc. and also in restoring peace in areas where communal tension had prevailed.

The Indian Legislature.

The annual session of the Indian Legislature commenced in Delhi on 20th January. The proceedings began without any opening ceremony but it is the Vice Roy addressed the House on 25th January. The opening stages of the session were characterised by a good deal of minor Government legislation and there was a variety of resolutions and bills by individual members; the latter were mostly of a local interest but included several Bills affecting Hindu social conditions. Mr. M. R. Jayakar for instance negotiated through various stages a Bill to declare gains of learning by a Hindu to be his separate property. He also endeavoured to forward a Special Marriage (Amendment) Bill this being a measure further to amend the Special Marriage Act of 1872. The purpose of the new measure was in effect to legitimate civil marriages between members of all communities. It was strongly opposed by a section of Muslim orthodox members and Mr. Jayakar's motion to refer it to a Select Committee was consequently talked out. A private Bill of much general importance which again came before the Assembly was that for the Reservation of Coastal Traffic to Indian owned ships. The only motion in regard to it was by Mr. Sarabhai that it be re-circulated for the purpose of obtaining further information in 30th April 1910 and this was carried without discussion.

Protection of the Galleries. The first few days of the session were considerably affected by a dispute between Government and the President concerning the protection of the public galleries. The President desired in particular to have no police in the galleries. The subject had been discussed by a special committee provided for by the Honour Member before the session began but arrangements for substituting other people for police to control the galleries though proposed subject to certain conditions by the Committee, were not made in time for the session. When therefore the President took the Chair at the first sitting his initial act was to refer to this question and to exercise his undoubted power to clear the public galleries. He also ordered that no further passes should be issued to the public until further orders and said that in the meantime he would consider what further steps he should take to vindicate the authority of the Chair. The upshot of the President's action was a series of conferences at Viceregal Lodge and on the 20th February the President read a letter from H. R. the Vice Roy dated 19th January announcing their result. This was more or less on the lines recommended by the Special Committee and provided that Government should appoint a senior police officer to be responsible to the President for regulating all matters relating to the protection of the Assembly within the inner precincts of the building; this officer to have the right to consult his superior officer in the Police Department if he considered that the precautions approved by the President were inadequate. It was agreed that reasonable protection of the Assembly could be secured

through an Assembly establishment and Government undertook to place at the service of the House as many police as might be required pending the recruitment of the suitable new establishment. In effect the police were in evidence in the galleries as much as formerly perhaps more and they were assisted in their duties with regard to ticket-holders by a number of clerks appointed by the President.

Another unusual step taken by the President was to read a statement of his position in relation to the boycott of the Legislature ordered by the Indian National Congress. The President said he made the statement because he was elected on the ticket of the Swamy Party. Since the boycott resolution by the Congress in the week following Christmas 1909 many friends he said, wanted to know how he proposed to act. In the end he declined to vacate the Chair.

If the Vice Roy in his address on 25th February dealt at length with the internal political situation and particularly with the plan for a **Round Table Conference**, in connection with the constitutionalism he pointed out that in important respects India already exhibited several of the attributes of a self-governing dominion but he said the demand for Dominion Status now being made on behalf of India was based upon a general claim to freedom from control by His Majesty's Government. Here there arose several difficulties, the existence of which could not be seriously disputed and the whole object of the conference now proposed is to afford opportunity to His Majesty's Government of examining in free consultation with Indian leaders how they may be met most rapidly, and most surely be surmounted.

His Excellency declined to pronounce between the various methods by which the Indian British Delegation might be selected. The only desire of His Majesty's Government he said would be that the delegates should be as representative as possible. And had it yet been possible to decide upon a date for the conference in view of a prospect of a conference and of the issue of the report of the Indian Statutory Commission in advance of it, he announced that he had decided that there should be a session of the Legislature early in the summer so that the election could be held anywhere after July 31st. His Excellency advised the House that at the Round Table Conference those taking part in the proceedings will be completely free to advocate any proposals for the realisation of Great Britain's professed policy that they may desire to advance. They would do this he repeated in the light of all the material then available. He finally earnestly appealed to representatives of all parties to collaborate with Great Britain in finding a solution to the present difficulties, and urged Indians themselves to prepare for the conference by securing unanimity among themselves upon the great matters at issue.

Annual Railway Budget.—The annual Railway Budget was introduced in the Legislative Assembly and Council of State on the 17th February. When the current year's Budget was presented a year ago, Government expected that the surplus for the year 1928-29 on all lines would be nearly Rs. 9 crores. The Railway Member now showed that both receipts and expenditure fell short of the amount assumed but that the shortage on the receipt side was the more serious, so that the year closed with a net gain of less than Rs. 8 crores. This disappointment was unfortunately symptomatic of what was to come, and the financial results of the year 1928-30 were disappointing. Government budgeted for a total revenue of about Rs. 106½ crores and a total expenditure of Rs. 95½ crores. Had this result been achieved they would have closed the year with a surplus of Rs. 11½ crores. On the commercial lines they now expected that the actuals would be over 4 crores worse than the estimate so that the final surplus would be little more than Rs. 7 crores. India like other countries, is passing through a period of trade depression due to falling prices, when buyers naturally adopt a cautious policy and goods move slowly. Moreover rates and fares had been reduced in the past five years to an extent which involved a loss of Rs. 5 crores of revenue. The hope that this would be made up by expansion of traffic had not been realised. The total receipts from commercial lines in 1928-30 were estimated at Rs. 105 crores, or Rs. 1½ crores above those for the preceding year, and expenditure was estimated at nearly Rs. 98 crores, an increase of Rs. 2½ crores. The net gain from commercial lines was thus placed at Rs. 7 crores out of which a loss of Rs. 18½ lakhs on strategic railways had to be met. The balance of Rs. 528 lakhs being insufficient to meet the due contribution of Rs. 612 lakhs to general revenues, it was necessary to draw Rs. 86 lakhs from the reserve to make up the amount.

Budget estimates for 1930-31 showed receipts nearly Rs. 106 crores, or nearly Rs. 3 crores more than the revised estimates for 1929-30 and a total expenditure at nearly Rs. 100 crores, an increase of a little over Rs. 2 crores over the revised estimates for 1929-30. The final estimated result was shown to be a net gain to the railways of nearly Rs. 8 crores, or about Rs. 3 crores better than the revised estimates for 1928-30. The contribution due to general revenues would be Rs. 674 lakhs and only Rs. 84 lakhs would then remain to be added to the reserve fund.

Railway capital expenditure budgeted for 1929-30 was budgeted at Rs. 24½ crores. Actual expenditure was now estimated at a little more than Rs. 24 crores. The 1930-31 budget provided for a capital expenditure of Rs. 10½ crores.

These figures show clearly how greatly the position has changed since 1927, when it seemed possible that funds would be forthcoming to meet all reasonable requirements for railway development. It has now become evident that the most drastic reduction in the capital programme is inevitable and that in the present circumstances there is nothing for it but to cut out cost according to our cloth.

General Budget.—The annual general budget was presented to both Houses of the

Legislature on the evening of the last day in February. In submitting the Finance Member Sir George Schuster showed that there had been serious deterioration in several revenue headings in the last two months of 1928-29 so that the year in question closed with an actual deficit of Rs. 106 lakhs instead of with a surplus of Rs. 80 lakhs set out in the revised estimates. Turning to the results for the year 1929-30 though Sir George could see no cause for anything like permanent pessimism for the future he found many things which increased the difficulties for the present. Failure of the rains in some places, excessive rains and floods in others, political uncertainties in India and general disturbance of world trade conditions were numbered among the misfortunes. The general budget results for the year indicated a balance of deterioration as compared with budget estimates, to the extent of Rs. 80 lakhs. This, combined with the original deficit of Rs. 90 lakhs which could not be covered by transfer from the revenue reserve fund brought the total deficit to Rs. 176 lakhs. Fortunately there was a windfall of the same amount on German Liquidation Account so that on balance the year 1928-30 closed square.

Dealing with the outlook for 1930-31 the Finance Member laid serious stress upon the losses which must ensue from continuance of the Civil Disobedience agitation. He mentioned among special items of expenditure in the forthcoming year Rs. 11 lakhs for the decennial census, Rs. 7 lakhs for continuance of the banking enquiry and Rs. 24½ lakhs for the development of civil aviation. Altogether and including Rs. 25 lakhs for inevitable increments of pay the total new expenditure budgeted for was Rs. 148 lakhs. The Finance Member also showed a new charge of Rs. 88 lakhs as special provision to meet liabilities in respect of Post-office Cash Certificates. Taking into account all these items, and of anticipated deterioration in the main commercial departments, the railway and posts and telegraphs, the budget revealed a gap of Rs. 552 lakhs to be closed. Towards this Sir George showed that the financial contract with the Army would be altered so as to extend it from four years to five years and to reduce the annual amount of it proportionately. This would mean a military budget of Rs. 54.20 crores in 1930-31 and the two following years instead of Rs. 55 crores in the first two of them. Government proposed to increase from 11 to 15 per cent the general import duty on cotton piece goods and further, to place a five per cent protective duty with a minimum of 2½ annas per pound on plain grey goods, against all cotton piece-goods from outside the United Kingdom, this protective duty to be in force for three years. Their next proposal was to increase the excise duty on kerosine from one anna to one anna six pies per gallon coupled with a reduction in the import duty from two annas to two annas three pies. They proposed an all-round increase of Rs. 1½ per cwt in the import duty on sugar. They proposed to raise by one pie in the super tax on all personal incomes of Rs. 15,000 and upwards and finally proposed to re-introduce an import duty of four annas per ounce on silver. The budget estimates thus provided for a surplus of Rs. 70 lakhs, while incidentally, the revenues

for 1929-30 would also benefit from the new proposals by Rs 3 lakhs

The Finance Member in his concluding remarks, said that special enquiries already made showed the impossibility of counting on any substantial reduction in the cost of the Civil Administration. In fact with all the new services and heads which are being pressed for consideration it is only by the exercise of the most rigid control that we shall be able to keep the growth of expenditure within bounds. He thought that the time had come for a comprehensive review of the whole expenditure position. Accordingly Government had decided to place an officer on special duty for this purpose.

The outstanding point in the discussion of the Budget and of the Finance Bill based upon it was opposition to the term of the new proposals for increasing the **Import Duties on Cotton Piece Goods**. The proposed new differential duty upon certain classes of goods gave an advantage to British manufacturers and though this form of duty was selected by Government on purely practical revenue grounds so as to

provide the maximum protection for the Indian mill industry at the minimum cost to the consumer the result was a bitter and violent attack upon Government by the extreme Left of the House on the ground that Government had deliberately given preference to Great Britain. The new proposals were eventually passed by a substantial majority but when the result was announced Pandit Madan Mohan Malaviya as leader of the Nationalist Party and a number of members on the benches behind him walked out of the House and forthwith resigned their seats in it.

Among other business during the session the House passed a resolution, adopting with certain amendments the report of the Indian Road Development Committee which later also proposed an increase by two annas on the Import and export duties and motor split in order to provide funds for road development. It also adopted a private resolution by Dr. B. H. Menon recommending the appointment of a committee with a view to the improvement and furtherance of primary education.

The Delhi sittings concluded on 31st March.

SUMMER SESSION

The annual session during the Simla season was held at an earlier date than usual in view of the prospective dissolution after 31st July in preparation for a general election and for the Round Table Conference in London. The first sitting took place on 7th July. Mr. V. J. Patel having several weeks previously resigned the Presidency the Deputy President Maulvi Muhammad Yaqub presided and the first important business of the session was the election of a new President. This took place with Mr. M. A. Jinnah one of the panel of chairmen in the chair. There was a contest and the result was the election of Maulvi Muhammad Yaqub by 78 votes against 22 votes recorded for Dr. Nand Lal. The election took place and received the approval of His Excellency the Viceroy and Governor General, on the morning of the 9th July and His Excellency addressed the House the same afternoon.

Lord Irwin specially referred to the internal political situation and spoke most frankly to the gravity of the times requires that I should place all those who hear or read my words in full possession of my thoughts. His Excellency pointed out that it was after the express declaration by himself of the purpose of His Majesty's Government in regard to the Round Table Conference and of the free opportunity for mutual co-operation and accord which the Conference was designed to provide that Mr. Gandhi took his reckless plunge into a campaign of civil disobedience. A warning of the ill consequences which such a campaign must involve fell upon deaf ears and the damage which the campaign had in countless directions already caused, was now evident. Those who

have identified themselves with this movement would have us regard it as a perfectly legitimate form of political agitation to which resort is had only under pressure of regrettable necessity. I cannot take that view. In my judgment and in that of my Government it is a deliberate attempt to coerce the established authority by mass action and when it has as it has, the avowed object of the making of Government impossible the Government is bound, either to resist or abdicate. The recent resolution of the All India Working Committee of the Congress indiscreetly designed to seduce police and troops from their allegiance, leaves no longer room for doubt of the desperate lengths to which the organisers of the movement are prepared to go. He would in truth, be a false friend to India who did not do his utmost to protect her from acquiescence in principles so fundamentally destructive.

His Excellency justified his use in the circumstances of special measures which would in normal times be indefensible. Speaking generally His Excellency said he had nothing but commendation for the servants of Government both civil and military, who in dealing with the movement, had been doing their duty with great steadiness and courage. So long as the Civil Disobedience movement persisted Government would fight it with all their strength but on the other hand so far as the constitutional nationalist movement was concerned, His Excellency desired nothing more than to be able to help India to translate her aspiration into constitutional reality. His Excellency announced that His Majesty's Government

have reached the conclusion that it would not be ready to prescribe for the conference any terms more limited than were implied in his statement of November 1st last, and that the conference should enjoy the full freedom that those words connote.

(In this the Viceroy gave his reply to those Nationalist leaders who had been demanding from His Majesty's Government a formulation of terms of reference to the conference and the specific announcement of a term that its purpose was to grant India full Dominion Status. Similarly His Excellency's declaration of Government policy towards the civil disobedience movement was a reply to a widespread demand being made for an amnesty of political prisoners.)

The session lasted only until 18th July. Its programme of official and non-official business included nothing of outstanding general interest but the feature of the session was a prolonged debate on a supplementary grant demanded by Government for expenditure in India in connection with the Round Table Conference. Mian Mohammed Shah Nawaz moved a vote of Rs. 100 in this demand in order to criticise the recommendations of the Indian Statutory Commission and their value as part of the material for the consideration of the Conference. This motion for a cut landed many members of the House in a quandary. They had hitherto boycotted the Statutory Commission and were now in effect pledged to ignore its Report. On the other hand no member of the House now that the Congress Party and the extreme

Left Wing of the Nationalists had received their seats desired to follow any line but that of co-operation towards the Round Table Conference. In the result the debate that followed was unorganized and patchy. In spite of efforts to keep the Statutory Commission's report out of view both it and the Conference were subjected to many interesting and valuable speeches. The net effect of the debate apart from a good deal of well-expressed criticism of various proposals in the Statutory Commission's report was a decided support by the House to the Government attitude declared in the Viceroy's speech that is of resistance to the lawless propaganda of the Congress and otherwise of restraint upon making the Round Table Conference a success.

Meanwhile outside the Chamber there took place some of the most important activities of members of the House in co-operation with other political leaders during the session. The net effect was an arrangement between Government on the one hand and Mr. M. R. Jayakar and Shri Tej Bahadur Sanyal on the other in which these two political leaders were at their own request permitted by Government to visit Pandit Motilal Nehru and Mr. Gandhi with a view to cultivating also their co-operation in the Conference.

The Legislature adjourned *sine die*. It was afterwards dissolved by the Governor General and there followed a general election. The new Assembly had been summoned for 14th January 1931. The Council of State met on 10th February 1931.

COPYRIGHT

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1887. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material

modifications of them in their applications to translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. The majority of Indian melodies it was explained in Council, have not been published, *i.e.*, written in staff notation except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced.

Indians Overseas.

NUMBERS.—The total Indian population resident in the countries to which Indians mainly emigrate for purposes of settlement, according to the latest available returns is as follows:—

Name of Country	Indian population	Date of Census
<i>British Empire</i>		
1 Ceylon	969 000	1920
2 British Malaya*	700 000	1920
3 Hong Kong	— 113	1911
4 Mauritius	281 000	1908
5 Seychelles	132	1911
6 Gibraltar	50 (approximately)	1920
7 Nigeria	100	1920
8 Kenya	6 709	1920
9 Uganda	1,613	1920
10 Nyasaland	515	1921
11 Zanzibar	12 841	1921
12 Tanganyika Territory	18 483	1907
13 Jamaica	17 671	1920
14 Trinidad	13 042	1920
15 British Guiana	128,208	1920
16 Fiji Islands	68,731	1921
17 Basutoland	179	1911
18 Swaziland	7	1911
19 Northern Rhodesia	56 (Asiatics)	1921
20 Southern Rhodesia	1 200 ()	1921
21 Canada	1,200	1920
22 Australia—		
Western Australia	300	} 2 000 (approximately) 1920
Southern Australia	200	
Victoria	400	
New South Wales	700	
Queensland	300	
Tasmania	100	
23 New Zealand	608	1921
24 Natal	141,330	1921
25 Transvaal	18 400	1921
26 Cape Colony	6 408	1921
27 Orange Free State	100	1921
28 Newfoundland		1921
Total for British Empire	2,520,065	
<i>Foreign Countries</i>		
29 United States of America	3 175 (Asiatics)	1910
30 Madagascar	5 272 (Indians)	1917
31 Reunion	5 194	1921
32 Dutch East Indies	832,067 (Orientals, chiefly Chinese & Arabs) (say) 50,000 Indians	
33 Surinam	34,057	1920
34 Mozambique	1 100 (Asiatics and half castes)	Not known
Peru	3,827	1922
Total for Foreign Countries	100,525	
Grand Total of Indians Overseas	2 620 590	

* Including Straits Settlement, Federated and Unfederated Malay States.

Origin of Indian Emigration—Emigration is prohibited by the Hindu Shastras and there is little evidence of any settlement of Indians overseas in early times except in Sumatra, Java and Ceylon. Emigration for purposes of labour dates from the beginning of the 16th century. From 1800 A. D. onwards Indians crossed the Bay to the Straits Settlements to work on the sugar, spice, tobacco, and coconut plantations of Penang, and this intercourse was allowed to continue for long without regulation. The first officially recorded instance of genuine recruitment for labour emigration occurred in 1830 when a French merchant named Joseph Argand, carried some 150 artisans to Bourbon. The abolition of slavery in British colonies in 1834 gave the first great impetus to the movement. The sugar planters of Mauritius at once turned to India as their best recruiting ground and between 1834 and 1837 obtained at least 7,000 recruits from Calcutta. The Government of India at a very early stage realised the necessity of bringing such emigration under regulation. The Law Commission was asked to investigate the case and to make recommendations for securing the well being of emigrants. They advised that no legislation was required except in order to prevent undue advantage being taken of the simplicity and ignorance of emigrants by providing that a magistrate should satisfy himself that all contracts were entered into freely and understood by them and in order to secure that sufficient provision was made for their accommodation and maintenance during the voyage. A copy of every engagement was also to be transmitted to the Government under which the emigrants were to live. These recommendations were embodied in the first Emigration Act (V of 1837), which also provided that contracts should be determinable after 5 years.

History of Emigration—Under the above Act emigration during 1837 was permitted to Mauritius, British Guiana and Australia (89 men, the first and last direct emigrants to Australia). In 1838 emigration was suspended owing to agitation in England regarding the abuses to which the system was liable and a committee of enquiry reported in 1840 that emigrants were being entrapped by force or fraud, robbed of their wages and treated with brutality. In consequence emigration was prohibited (Act XV of 1842) except to Mauritius and there control was tightened. In Act XXI of 1844 emigration under still stricter regulation was allowed to Jamaica, British Guiana and Trinidad. Act XIII of 1847 removed the restrictions on emigration to Ceylon. The emancipation of slaves in the French colonies in 1849 gave rise to a system of emigration from French Indian ports to Réunion and Bourbon which was largely based on crimping in British territory. This practice was checked by Act XXIV of 1852. In 1858 emigration was opened to St. Lucia, and in 1860 to St. Vincent, Natal and St. Kitts. In the latter year a more elaborate Act based on a convention with the French Government was passed legalising and regulating emigration to Réunion, Martinique, Guadeloupe and French Guiana. Act XIII of 1864 marks an important stage in the history of emigration, since it elaborated

and consolidated the whole system of control. It was itself amended in 1869 and 1870 in important respects with the object of preventing epidemics on emigrant vessels and improving sanitary conditions in settlements. In 1869 emigration was permitted to Grenada, and in 1872 to Surinam. Owing to the removal of the Straits Settlements from the control of the Government of India in 1847 emigration to that colony came under all the restrictions imposed by the Emigration Act and was only permitted from the port of Negapatam. Owing to the injury caused to the agricultural industries of the colony, these restrictions were removed in 1872 subject only to magisterial control of recruitment in India. In 1870 complaints reached the Government of India of gross abuses in the treatment of emigrants in British Guiana. A commission of enquiry was appointed, and their report led to important legislation in the colony for the protection of Indian immigrants, which was subsequently extended to Trinidad. Owing to similar complaints from Natal and Mauritius, commissions of enquiry were also instituted in both these colonies, and their reports in 1872 brought to light a number of points requiring amendment.

Recent Legislation—In 1871 a fresh consolidating Act was passed (Act VII of 1871) by which the Acts regulating emigration to the French Colonies and two amending Acts to Act XIII of 1864 were incorporated in the general law. The question of revision of the law again came up for consideration in 1882, when several cases of kidnapping and other objectionable practices were reported to the Government of India. The opportunity was taken to depoint two officials (Major Pittcher and Mr. Grierson) to ascertain, in the N. W. P. and in Bengal respectively, the way in which the system of recruitment actually worked, the respects in which it was open to improvement, and the attitude of the people towards emigration. Their reports were reviewed by the Government of India, and finally in 1883 the law was again recast and consolidated by Act XXI of that year. This Act specifies the countries to which emigration is lawful, but empowers the Governor-General in Council to add to the list by notification, and also to prohibit emigration to any of the countries in the list on the ground of epidemic disease and of excessive mortality among emigrants in such country or on the ground that proper measures have not been taken for the protection of emigrants, or that the agreements made with them in India are not duly enforced. This Act with certain amendments of no importance to the system of indentured emigration remained in force until 1908, when a fresh revision of the law was undertaken.

Under the Act of 1908 (XVII of 1908) the countries to which emigration was lawful were the British Colonies of Mauritius, Jamaica, British Guiana, Trinidad, St. Lucia, Grenada, St. Vincent, Natal, St. Kitts, Nevis, Fiji, the Seychelles, the Netherlands Colony of Dutch Guiana and the Danish Colony of St. Croix. Emigration to St. Lucia, Grenada, St. Vincent, St. Kitts, Nevis, the Seychelles and St. Croix ceased soon after the passing of the Act. The

demand for fresh labour having died out. Emigration to Natal was discontinued from the 1st July 1911 as the Government of India were satisfied that it was undesirable to continue to send Indian labour to that country. Emigration to the French Colonies of Reunion, Martinique and Guadeloupe had been suspended prior to the passing of the Act of 1906 on account of repeated complaints of the inadequate precautions taken for the proper treatment and repatriation of the immigrants.

The labour laws of the several Colonies provide for the protection and welfare of resident Indian labourers. The Government of India also occasionally depute to the colonies their officers to report on the condition of Indian labourers. Deputations from India visited Fiji and British Guiana in 1921. In spite of all precautions certain social and moral evils had grown up in connection with the indentured system of emigration and Indian public opinion has during the last decade been strongly opposed to it. The whole system was exhaustively examined by the Government of India in 1915 in the light of the report received from Messrs. McNeill and Chinnai and they arrived at the conclusion that the time has come when contract labour should be abolished. The Secretary of State for India accepted this policy and authorised the Government of India to announce the abolition of the indentured system and the announcement to this effect was made in 1916.

In 1922 a further step forward was taken in Act VII of 1922 which prohibited indentured emigration and all unskilled emigration, except to countries specially approved by the Legislature. Emigration to Ceylon and Malaya was brought under control, and the definition of 'Emigrant' was extended to cover all persons 'assisted' to depart from India.

Present Position—Indian emigration questions have recently taken on a wider aspect. The status of Indians in the Empire generally is one in which the Indian public now take keen interest. It is no longer possible to deal with the treatment of Indian labour apart from other classes of Indian emigrants and travellers. In several colonies and dominions, considerable Indian communities have sprung up, which although composed largely of the descendants of indentured labourers, are themselves free and lawfully domiciled citizens of the countries in which they are settled, but have not yet been placed on a footing of legal, social, political and economic equality with the rest of the population. The issues round which public interest at present centres are three—

(a) Control of emigration

(b) Rights of Indians to admission to other parts of the Empire.

(c) Rights and disabilities of Indians domiciled overseas

These questions may be considered separately

Control of Emigration—So far as unskilled labour is concerned, the Government of India have assumed absolute powers of control. The terms of section 10 of the Emigration Act of 1922 are as follows—

10 (1) Emigration, for the purpose of unskilled work, shall not be lawful except to such countries and on such terms and conditions as the Governor General in Council, by notification in the *Gazette of India*, may specify in this behalf

(2) No Notification shall be made under sub-section (1) unless it has been laid in draft before both Chambers of the Indian Legislature and has been approved by a resolution of each Chamber, either without modification or addition, or with modifications and additions to which both Chambers agree, but upon such approval being given, the notification may be issued in the form in which it has been so approved.

Under this law emigration has been legalised to Ceylon on the following conditions

(1) The emigrant shall—

(a) have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of Ceylon, or

(b) have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him

(2) The emigrant shall not before leaving British India have entered into a contract of service for a period exceeding one month

(3) Within six months from the issue of this Notification, or within such further period as the Governor General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that any contract of service or a period exceeding one month entered into by an emigrant shall be void

(4) No part of the cost of his recruitment, subsistence during transport or transport shall be recoverable from any emigrant and all expenses in this connection shall be defrayed from a common fund to be raised in such manner and managed by such agency as may appear suitable to the Colonial Government.

(5) The Government of Ceylon shall at any time when so desired by the Governor General in Council admit and give all facilities to an Agent appointed under section 7 of the Act

(6) Within one year of his arrival in Ceylon any emigrant who has been assisted to emigrate at the cost of the common fund referred to in clause (4) shall, on satisfying the Agent appointed under section 7 of the Act that his return to his home is desirable either on the ground of the state of his health or on the ground that the work which he is required to do is unsuitable to his capacity, or that he has been unjustly treated by his employer, or for any other sufficient reason, be repatriated free of cost to the place of recruitment, and the costs of such repatriation shall be defrayed by the Government of Ceylon or the Ceylon Planters Association

(7) If at any time there is no Agent appointed under section 7 of the Act, the Government

of Ceylon shall appoint a person to perform the duties of the Agent as set forth in clause (8)

(8) Within six months from the issue of this Notification or within such further period as the Governor-General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that no payment made in India by a recruiter to an emigrant to enable him to pay off debts before emigrating shall be recoverable

(9) The Government of Ceylon shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of persons emigrating to Ceylon in accordance with this Notification

Similar conditions have been imposed in the case of Malaya. Emigration was also permitted to Mauritius for a period of 1 year only with effect from May 1st 1922, and limited to a number not exceeding 1,500 labourers. The terms were more onerous than in the case of nearer Colonies and the arrangement is now lapsed

Emigration to British Guiana for the purpose of unskilled work has also been declared lawful on the terms and conditions given below but the date from which emigration is to commence has not yet been fixed—

Emigration to British Guiana—Emigration to British Guiana for the purpose of unskilled work shall be lawful with effect from such date as the Governor General in Council may with the concurrence of the Governor of British Guiana notify in the *Gazette of India* on the following terms and conditions which shall thereupon become operative—

(1) The family shall be the unit for the purposes of emigration. Not more than 500 families shall be permitted to emigrate and the number of persons included in the said 500 families shall not exceed 1,500

(2) The emigrants shall either have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of British Guiana or have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him

(3) No part of the cost of his recruitment or subsistence during transport shall be recoverable from any emigrant and all expenses in this connection shall be borne by the Government of British Guiana or met from funds at their disposal

(4) The Government of British Guiana shall at any time when so desired by the Governor General in Council, admit and give all facilities to an Agent appointed under section 7 of the Act

(5) If at any time there is no Agent appointed under section 7 of the Act, or if the Agent is absent or unable to perform his duties the Government of British Guiana shall at the request of the Governor General in Council appoint a person to perform temporarily the duties of the Agent

(6) Prior to the arrival of the emigrants Settlement Commission shall be appointed in

British Guiana to select and prepare suitable agricultural land for the emigrants and generally to supervise their employment. The Agent referred to in clause (4) shall on appointment be a member of such Commission.

(7) The Government of British Guiana shall offer to each family for its separate enjoyment a holding comprising not less than five acres of suitable agricultural land prepared for cultivation on the terms hereinafter set out in a locality which shall be healthy and shall have an adequate supply of good drinking water. All expenses in connection with the preparation of the holdings shall be borne by the Government of British Guiana and shall in no case be recoverable from an emigrant.

The annual rent of the holding shall be fixed by the Settlement Commission at a rate not exceeding the lowest rate paid in the locality.

After an emigrant has been in occupation of a holding for three years he shall provided that he has cultivated a portion of the holding either by himself or through some member of his family be entitled to a grant of the holding on payment at any time during the ensuing four years of such fees not exceeding 24 dollars as may be fixed by the Settlement Commission.

On the expiry of seven years from the date of the commencement of his occupation of a holding an emigrant shall acquire absolute ownership in the holding provided that he has paid the rent and fees referred to in the foregoing paragraphs of this clause and has brought under cultivation either by himself or by some member of his family half the area of his holding.

(8) An emigrant on arrival in British Guiana shall be housed and maintained without charge by the Government of British Guiana for at least one month.

(9) If any emigrant so requires loans shall be made to him for maintenance, house accommodation, payment of rent and for agricultural purposes generally. Free medical assistance and free skilled supervision shall be provided.

(10) Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of 7 years from the date of his arrival in British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 3 and not more than 5 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of half of the cost of his passage from his residence in India to British Guiana.

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 5 and not more than 7 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of quarter of the cost of his passage from his residence in India to British Guiana.

(11) Notwithstanding anything contained in the last preceding clause the Government of British Guiana on the request of an Agent appointed under section 7 of the Act shall repatriate at its own expense and without any pay-

ment by or on behalf of the emigrant to the place of his former residence in India any emigrant at any time after his arrival in British Guiana.

(12) An emigrant shall be at liberty at any time after his arrival in British Guiana to take up work or employment other than or in addition to the cultivation of a holding on lease from the Settlement Commission.

(13) The ordinance enjoining compulsory education in British Guiana shall be enforced to the same extent in the case of Indian children as in the case of children belonging to other communities.

(14) Boards of arbitration in regard to wages shall be established before the arrival of the emigrants and Indians shall be adequately represented on such boards.

(15) Any Indian who has emigrated to British Guiana before the date of this notification and under any agreement in force at the date of this notification is entitled to an assisted return passage to India shall not be required to pay more than 25 per cent of the passage in the cost of his return passage and clothing over the cost of such passage and clothing at the time of his first arrival in the colony.

(16) Any Indian who has emigrated to British Guiana before the date of this notification and has at the date of this notification become or thereafter becomes destitute shall be entitled to be repatriated to India at the expense of the Government of British Guiana without being further required to prove that he has become incapable of labour.

(17) The Government of British Guiana shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of the persons emigrating to the Colony in accordance with this notification.

Admission of Indians to Other Parts of the Empire—On the motion of the Government of India this question was discussed at the Imperial War Conferences 1917 and 1918, and the policy accepted by the self governing dominions and the British Government was embodied in the following resolutions—

(1) It is an inherent function of the Governments of the several communities of the British Commonwealth including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities.

(2) British citizens domiciled in any British country including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce including temporary residence for the purpose of education such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement.

(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition (a) That not more than one wife and her children shall be admitted for each such Indian, and (b) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian."

The first paragraph of this resolution has regularised the various restrictions on immigration which the self-governing dominions have, from time to time, adopted and which, without expressly discriminating against Indians are in practice used in order to check Indian immigration, the objections to which are stated to be not racial or political but economic. Australia prohibits the entry of any person who fails to pass a dictation test of not less than 50 words in any prescribed language. New Zealand prohibits the entry of any person who has not received in advance a permit from the Dominion Government which is refused to any person regarded as unsuitable to settle in the country. South Africa prohibits the entry of any person deemed by the Minister of the Interior on economic grounds or on account of his standard or habits of life to be unsuited to the requirements of the Union. Canada prohibits the landing of any person who has come to the Dominion otherwise than by continuous journey from the country of which he is a native and unless he possesses in his own right 250 dollars. New Zealand and the Irish Free State impose no restrictions. All the self-governing Dominions have adopted special exemptions in favour of students, tourists and merchants visiting the countries for the temporary purposes of commerce, pleasure or education. India on its side has assumed power to regulate the admission of immigrants from any other part of the Empire or foreign countries, by means of passports. A bill has also been passed by the Indian Legislature empowering the Government of India to make rules for the purpose of securing that persons not being of Indian origin, domiciled in any British possession, shall have no greater rights and privileges as regards entry into and residence in British India, than are accorded by the law and administration of such possession to persons of Indian domicile. With regard to the Crown colonies and protectorates, the attitude of the Indian Government is that there is no justification for placing any restrictions on the immigration of British Indians, which are not placed on other classes of British subjects, and this principle has in practice been observed by the Colonial Office except in the case of Kenya colony where, as stated hereafter, the British Government has reserved to itself the right to impose restrictions on the immigration of classes of people whose entry into the colony may have an adverse effect on the economic evolution of the indigenous population.

Rights and Disabilities of Indians Lawfully Domiciled Overseas.—The policy of the Empire is summed up in the resolution of the Imperial Conference, 1921, which was recorded in the following terms—

"This Conference reaffirms that each Community of the British Commonwealth should enjoy complete control over the composition of its own population by restricting immigration from any of the other communities, but recognises that there is incongruity between the position of India, as an equal member of the Empire, and the existence of disabilities upon British Indians lawfully domiciled in some parts of the Empire, and this Conference,

therefore, is of opinion that in the interests of the solidarity of the Commonwealth it is desirable that the rights of such Indians to citizenship should be recognised."

"The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The representatives of India while appreciating the acceptance of this resolution, nevertheless feel bound to record their profound concern at the position of Indians in South Africa and hope that by negotiations between India and South Africa a way can be found as soon as may be to reach a more satisfactory position."

The Right Hon. Sri Srinivasa Sastry visited the Dominions of Australia, Canada, and New Zealand in the course of 1922 as the emissary of the Government of India to assist them in giving effect to this resolution. The main object of his mission was to appeal to the Governments and public of Canada and Australia fully to enfranchise qualified domiciled Indians. In Australia, Indians resident in Queensland and Western Australia have neither the provincial nor the federal franchise. In Canada, Indians resident in British Columbia are excluded from the dominion as well as the provincial franchise. While successful in securing a more sympathetic atmosphere towards Indians, he failed to bring about any modification in the existing electoral laws.

The question of giving effect to this resolution of 1921 was raised by the Indian representatives at the Imperial Conference 1923. Their proposal was as follows—

Let the Dominion Governments who have an Indian population, let His Majesty's Government in the areas under their direct control such as Kenya, Uganda, Fiji and other places where there are Indians resident, appoint Committees to confer with a Committee which the Government of India will send from India and explore the avenues of how best and how soonest the principle of equality implicit in the 1921 Resolution may be implemented."

This proposal was favourably received by the Dominion Premiers, including General Smuts and by the Secretary of State for the Colonies who cordially agreed that there should be full consultation and discussions between him and a Committee appointed by the Government of India upon all questions affecting British Indians domiciled in British Colonies and protectorates and mandated territories. In pursuance of the proposal, the Government of India appointed a Committee in March 1924 composed of Mr. J. Hope Simpson, M.P. Chairman, H. H. the Aga Khan, Sir B. Robertson, Sir Bahadur T. Rangachariar, M.L.A., and Mr. K. O. Roy with Mr. R. B. Swbank, C.I.E. I.C.S., as Secretary to make representations to the Colonial Office on certain outstanding questions affecting Indians in Kenya and Fiji. The Committee assembled in London early in April 1924 and dispersed towards the end of July. During this period they had several interviews with the Secretary of State for the Colonies and the officials of the Colonial Office, in which they made representations upon a variety of important matters affecting Indians in Kenya, in Fiji and

in the mandated territory of Tanganyika. In regard to Kenya, the representations covered all questions of the greatest to India dealt with in the decision of His Majesty's Government. The result of these representations was announced by Mr J. H. Thomas in the House of Commons on August 7th, 1924. The situation in Kenya also improved as a result of the work of the committee by the decision of the Indian community to relinquish their former attitude of non-co-operation and to accept an arrangement by which they will select five members to be nominated by the Governor to the Legislative Council. The result of the representations which the Committee made on certain outstanding questions relating to Indians in Fiji was announced on January 12th 1927 when the Government of India published the more important papers relating to the negotiations which had been going on with the Colonial Office for some time.

Summary of present Position—Outside Australia, N Zealand and Canada the position stands as follows —

(1) **South Africa**—The main grievances of Indians which led to a passive resistance movement headed by Mr Gandhi were settled by the compromise embodied in the Indians Relief Act, 1914 and by the guarantee known as the Smuts-Gandhi agreement. The substance of this agreement is embodied in the following extracts from letters —

(i) Mr Gorges Secretary for the Interior to Mr Gandhi, June 30th, 1914. With regard to the administration of existing laws the Minister desires me to say that it always has been, and will continue to be the desire of the Government to see that they are administered in a just manner and with due regard to vested rights.

(ii) Mr Gandhi to Mr Gorges, July 7th 1914

By vested rights I understand the right of an Indian and his successors to live and trade in the township in which he was living and trading, no matter how often he shifts his residence or business from place to place in the same township

This has been officially interpreted to mean that the vested rights of those Indians who were then living and trading in townships whether in contravention of the law or not should be respected

In 1920 an Asiatic Enquiry Commission was appointed to investigate the grievances of Indians regarding their rights to trade and hold land in the Union. Their main recommendations were as follows —

(1) Law 3 of 1885 (Transvaal) the Gold Law of the Transvaal (Act No 35 of 1906) and Act No. 37 of 1919 should not be repealed

(2) There should be no compulsory repatriation of Asiatics, but

(3) Voluntary repatriation should be encouraged

(4) There should be no compulsory segregation of Asiatics but

(5) A system of voluntary separation should be introduced under which municipalities should have right subject to certain conditions —

(a) to lay out residential areas for Asiatics, (b) to set aside certain streets or portions of the town for Asiatic traders to which existing license holders should gradually be attracted

(8) These areas should be selected and allocated by a board of independent persons in consultation with the Municipal Council and Asiatic community

(7) In Natal the right of Asiatics to acquire and own land for farming or agricultural purposes, outside townships should be confined to the coast belt, say, 20 to 30 miles inland.

(8) A uniform License Law applicable to all the Provinces of the Union should be possible, be enacted. If that is impracticable, the law relating to the issue of Trade Licenses in the Cape Province, the Transvaal and Natal should be assimilated in a comprehensive consolidating Act of Parliament providing, *inter alia* —

(a) That the granting of all licenses to trade (not being liquor licenses) shall be entrusted to municipal bodies within the area of their jurisdiction, outside those areas, to divisional Councils in the Cape Province and in the other Provinces to special Licensing Officers appointed by the Administrator

(b) The grounds upon which an application for the grant of a new license may be refused

(c) That the reasons for the refusal to grant any license shall be recorded, together with any evidence tendered for or against the application

(d) That, in the case of the refusal of a license on the ground that the applicant is not a fit and proper person to hold the same or to carry on the proposed business there shall be a final appeal to a Special Appeal Board, appointed by the Administrator

(e) That municipal bodies shall have the right to prohibit the license holder, or any other person, from residing in any shop, store or other place of business

(9) There should be no relaxation in the enforcement of the Immigration Laws, and more active steps should be taken to deal with prohibited immigrants who have evaded the provisions of those laws.

(10) The administration of the Asiatic policy of the Government should be placed in the hands of one official, under whose charge would come all administrative functions, together with the official records relating to Asiatics. This officer should also be entrusted with the duty of securing full statistics regarding Asiatics in the Union and of the arrivals in and departures from South Africa. Details of all applications for trade licenses, and transactions in connection with the purchase of land and property made by Asiatics throughout the Union, should be sent to him in order to ensure the enforcement of the provisions of Section 3 of Act 22 of 1913

On the other hand, he should keep in close touch with the various sections of the Indian community, see that the laws are applied in a just manner give a ready ear to any complaints or grievances and generally safeguard their interests.

From the above it will be observed that the Commission recommended the retention of a law prohibiting the ownership of land by Asiatics in the Transvaal and another of its recommendations, threatened the right which Indians had previously enjoyed of acquiring and owning land in the (plains of Natal. Against this latter proposal the Government of India earnestly protested but it was not accepted by the Union Government.

Present Position—Indians enjoy both the political and municipal franchise only in the Cape Province and the municipal franchise only in Natal. In the remaining two provinces they are not enfranchised. They are subjected to differential treatment in the matter of trading licenses especially in the Transvaal. Their immigration into the Union is barred and severe restrictions exist on inter provincial migration. In the Transvaal they are not allowed to acquire immovable property outside locations and on the Witwatersrand they are subject to the restrictions of the Gold Law.

The anti Asiatic party have made several efforts especially in Natal, further to curtail the rights of Indians. Some of these are merely irritating social disabilities, such as railway regulations debarring Indians from travelling in any other carriages except those reserved for them, and similar rules restricting their use of trainways at Durban and excluding them from race courses and betting club rooms. Examples of recent anti-Asiatic legislation of major importance are

(a) The Natal Rural Dealers Licensing Ordinance, transferring the power of granting trading licenses from the Licensing Officer to an elected Licensing Board, on which Indians may not sit.

(b) The Durban Land Alienation Ordinance. This Ordinance which enables Municipalities in selling land to assign it for particular communities, and to that extent to secure segregation, has been allowed on condition that Asiatics are given reasonable opportunity for acquiring adequate residential sites.

Anti Asiatic feeling in South Africa—A bill for the segregation of Asiatics known as the Class Areas Bill was introduced in the Union Assembly in March 1924 which though not specifically directed against Indians, contained provisions which could be used for the compulsory segregation of all Asiatics in certain areas. Indian opinion was deeply agitated over the prospect of this legislation which it was apprehended might in the existing state of public opinion in South Africa result in the economic ruin of a large number of Indian traders in the Union. In response to the vigorous protests made by the Government of India the Union Government gave an assurance that it was their desire and intention to apply the measure if it became law in a spirit of fairness to the interests and reasonable requirements

of resident Indians. The Government of India whilst welcoming the assurance were unable to rest satisfied with this position and made every effort to persuade the Union Government to abandon the project. For the moment they have succeeded, as in consequence of the unexpected dissolution of the South African Parliament the bill has lapsed.

In Natal an Ordinance was introduced in the Provincial Council in 1921 dealing with the township franchise to the detriment of the Indian community. It was again introduced in 1922 and in a modified form in 1923 but in each instance the Union Government withheld its approval. In 1923 the Union Government itself introduced a measure entitled *The Class Areas Bill* containing provisions which could be used in urban areas for the compulsory segregation of Asiatics. Indian opinion was deeply exercised over the prospects of this legislation despite the assurance of the Union Government that it desired to apply the measure in a spirit of fairness to the interests and reasonable requirements of Indian residents. But in consequence of the unexpected dissolution of the South African House of Assembly in April, 1924 the bill lapsed. Towards the end of December 1924 news was received that the Government of South Africa had given its consent to the Natal Borough Ordinance. This measure while safeguarding the rights of Indians already on the electoral roll of Boroughs prevented further enrolment of Indians as burgesses. Similarly the Natal Township Franchise Ordinance (No. 3 of 1924) was passed to or to render Indians ineligible for township franchise in future. Further, towards the end of January 1925 news was received that the Union Government had gazetted a Bill to amend the Mines and Works Act in order to take powers to refuse certificates of competency to natives or Asiatics in certain occupations. The Government of India made suitable representations in the matter to the Union Government and the Select Committee to which the measure was referred altered its wording so as not to refer to Asiatics and natives directly. The Bill as amended by the Select Committee was passed by the Union Assembly but rejected by the Senate. In January 1926 it was reintroduced and in May it was adopted in a joint Session of the Senate and the Assembly, by eighty three votes to sixty seven. In reply to representations made by the Government of India they were informed that there was no present intention on the part of the Union Government of extending regulations beyond the position as it existed prior to the judgement of the Transvaal Provincial Division of the Supreme Court in the case *Hex v. Hildick Smith* when it was held that certain regulations with reference to mines and works which have actually been in force in the Union of South Africa since 1911 and in certain provinces for many years before that date were not valid under sections of the Act in terms of which they were promulgated. The Government of India were assured that should any such extension of the scope of these regulations be contemplated in future every reasonable opportunity will be given to all the parties in the Union interested in the matter to make representations.

In July 1925, a more comprehensive Bill, known as the Areas Reservation and Immigration and Registration (Further Provision) Bill, was introduced in the Union Assembly. The Government of India made effective representations against the provisions of this Bill both on grounds of principle as well as of detail.

Deputation to S. Africa

Towards the end of November 1925 the Government of India with the concurrence of the Government of South Africa sent a deputation to South Africa the personnel of which was as follows—

G. F. Paddison Esq. C.S.I., I.C.S. Com-
missioner of Labour Madras—*Leader*
Hon. Mr. Syed Baza Ali M.A.—*Member*
Sir Deva Prasad Saravadhikary Kt. C.I.E.—*Member*

G. S. Bajpal Esq. C.B.E., I.C.S.—*Secretary*

The main purpose of the deputation was to collect as soon as possible first hand information regarding the economic condition and general position of the resident Indian community in South Africa and to form an appreciation of the wishes and requirements of the Indian community in South Africa. This deputation was followed by a return visit to India of a Parliamentary deputation from the Union Government of which the following were members—

The Hon. Mr. W. W. Rivers, Minister of Mines and Industries, Patrick Duncan Esq. C.M.G., Messrs. A. C. Jordan, J. H. Murray, G. H. V. Venn, Mr. S. V. Verma, Mr. H. Rood and J. H. Hartshorn. As a result of the investigations of these deputations the Government of India and of the Union arranged for a meeting in the Union of a further delegation from India to explore every possible avenue in order to arrive at a satisfactory solution of the Indian problem.

The Indian delegation whose members were Sir Muhammad Habibullah, the Hon. Mr. Sir Phiroze Sethna, Sir Percy Fildes, Sir G. F. Paddison, the Hon. Mr. Srinivasa Sastry, Mr. G. L. Corbett and Mr. G. S. Bajpal assembled in conference with the Parliamentary deputation in Cape Town on the 17th December 1926. At the session which lasted until the 11th January 1927 the contentious differences were discussed by the delegates freely and openly and in a spirit of determination to find a satisfactory solution of the outstanding difficulties. At the close of the Conference the delegates were therefore able to recommend the following articles, which were unanimously approved of by the respective Governments as a basis of agreement—

- (1) Both Governments reaffirm their recognition of the right of South Africa to use all just and legitimate means for the maintenance of Western Standard of life.
- (2) The Union Government recognise that Indians domiciled in the Union who are prepared to conform to Western Standards of life should be enabled to do so.
- (3) For those Indians in the Union who may desire to avail themselves of it the Union Government will organise a

scheme of assisted emigration to India or other countries when Western standards are not required. Union domicile will be lost after three years continuous absence from the Union in agreement with the proposed revision of the law relating to domicile which will be of general application. Emigrants under the assisted emigration scheme who desire to return to the Union within the three years will be allowed to do so only on re-fund to the Union Government of the cost of the assistance received by them.

- (4) The Government of India recognise their obligation to look after such emigrants on their arrival in India.
- (5) The admission into the Union of the wives and minor children of Indians permanently domiciled in the Union will be regulated by paragraph 1 of Resolution XXI of the Imperial Conference of 1914.
- (6) In the expectation that the difficulties with which the Union has been confronted will be materially lessened by the agreement which has now happily been reached between the two Governments and in order that the agreement may come into operation under the most favourable auspices and have a fair trial the Government of the Union of South Africa have decided not to proceed further with the Areas Reservation, Immigration and Registration (Further Provision) Bill.
- (7) The two Governments have agreed to watch the working of the agreement now reached and to exchange views from time to time as to any changes that experience may suggest.
- (8) The Government of the Union of South Africa have requested the Government of India to appoint an Agent in the Union in order to secure continuous and effective co-operation between the two Governments.

In India the settlement was on the whole well received. In South Africa the more responsible newspapers, both English and Dutch such as the Cape Times and Die Burger paid handsome tributes to both delegations for the statesmanship with which they had brought to bear on their work and the eminently reasonable and practical character of the results achieved by them. The majority of people in both countries doubtless regard it as a good first step in the solution of a complicated problem and in the spirit of which it is the outcome as the best guarantee of a progressive and friendly adjustment honourable to both parties.

The friendly relations which were happily established between the Government of India and the Union Government of South Africa as a result of the agreement not only continue but have grown in warmth and sincerity. The Government of India sent out as their first Agent in South Africa the Right Hon. Mr. Srinivasa Sastry, P.C. who was a member of the Government of India's Delegation to the Cape Town Conference. His appointment

was received with universal approval both in India and South Africa, the satisfaction felt by the Union Government being indicated by their decision, as an act of grace to make his appointment, to extend an amnesty to all Indians illegally present in the Union. On their part the Union Government after the ratification of the Agreement by the two Governments, lost no time in introducing legislation to give effect to their undertakings under it so that when Mr Sastri arrived in South Africa in June 1927 all that remained to be done was to take action under Part III of the Agreement relating to the measures required for the upliftment of the Indian community. Most of the provisions of this part concern the Province of Natal where the bulk of the Indian population of the Union is resident, and the Union Government were not slow in moving the Provincial Administration to appoint a Commission to enquire into the condition of Indian education in that province and to devise the means necessary for its improvement. Co-operation with this Commission on the part of the Government of India was provided by the Deputation from India of two educational experts—Mr K P Kiehl ICS Deputy Director of Education in the United Provinces, and Miss C Gordon, BE (Edin.), Madras Educational Service, Lecturer in Kindergarten methods at the Government Training College at Sastapet to advise and assist the Commission in its investigations and deliberations.

A notable feature of the present situation was the marked spirit of friendliness and good will which now animates the Union Government in dealing with all problems affecting the domiciled Indian community. An example of this occurred in the year 1927 when a measure was introduced in the Union Parliament known as the Liquor Bill, clause 104 of which purported to prohibit the employment of Indians on any licensed premises—hotels, clubs, breweries etc. The appearance of this clause which threatened the livelihood of 3,000 Indians engaged in such occupations caused consternation among them and the Minister in charge decided to withdraw the clause from the scope of the Bill.

Much of the credit for the salutary measures referred to and the spirit of friendliness which they denote were due to the Right Hon ble Mr Sastri, the Agent of the Government of India in South Africa whose tact and honesty earned for him the confidence of the European community official and non official alike and an increasing measure of their sympathy and assistance in furtherance of the Indian cause. Gratifying response was made by the Indians to this appeal for £20,000 for the purpose of opening a combined Teachers Training and High school in Durban. The institution which meets an urgent need for Indians in the Union of South Africa was opened on October 14th 1929, by His Excellency the Earl of Athlone, Governor General of South Africa. It is known as the Sastri College and has on its staff six fully qualified Indian teachers recruited in India.

In India the Government of India have appointed officers to look after repatriates and their personal property immediately upon their return from South Africa, to arrange for their

despatch to their homes and if possible, to find them employment for which they may be suited.

Early in 1929 the Rt. Hon V S Srinivasa Sastri retired on the expiration of his period of appointment, and Sir Kurma Venkata Reddi, Kt was chosen as his successor. In December 1929 sudden and serious illness compelled Sir Kurma Reddi to return to India on sick leave. During the time he has held his post, Sir Kurma has amply justified his selection to this important office.

Early in February 1930 the Government of the Union of South Africa set up a Select Committee of the House of the Assembly to enquire into certain questions relating to the right of Indians to occupy and own fixed property in the Transvaal and to propose such legislation to the House as it might deem fit. This decision was the result of a number of recent judicial judgments dealing upon the occupation of premises on proclaimed grounds in the Transvaal by persons belonging to the native races of Asia and to the wide spread belief that the intentions of the Union Parliament as indicated in Act 37 of 1919 which purported to prohibit the acquisition of immovable property by Asiatics subsequent to its coming into operation were being systematically defeated. As the labours of the Committee were likely to affect important Indian interests and as Sir Kurma Reddi was on leave in India the Government of India deputed Mr J D Tyson ICS to make suitable representations to the Committee for safeguarding legitimate Indian interests and to give the Indian community in the Transvaal such assistance as it might need for placing its views before the Committee. The Committee's conclusions which were embodied in a Bill and its Report were placed on the table of the Legislative Assembly of the Union on the 19th May and the Bill prepared by them was read in the House for the first time on the 14th of that month. As soon as copies of the Bill and the Select Committee's Report reached the Government of India, they made pressing representations to the Government of the Union to allow adequate time for careful examination of the far reaching provisions of the measure which the Select Committee had prepared. Their representations were not without effect and the Union Government decided to postpone further consideration of the Bill until the next session of the Union Parliament which will commence early in 1931.

(2) **Kenya Colony.**—The grievances of Indians domiciled in this Colony are fully set forth in the published despatch of the Government of India, dated October 21st, 1920. The controversy centred round the following points—

(a) **FRANCHISE.**—Indians have not the elective franchise. The Government of India proposed that there should be a common electoral roll and a common franchise on a reasonable property basis plus an educational test, without racial discrimination for all British subjects.

(b) **SEGREGATION.**—Professor Simpson who was sent to East Africa to report on sanitary matters, recommended segregation on sanitary grounds. The Government of India objected, firstly, that it was impracticable,

secondly, that it was commercially inconvenient and thirdly, that Indians are in practice unfairly treated in the allocation of sites

(c) **THE HIGHLANDS.**—Lord Elgin decided in 1908 that as a matter of administrative convenience grants of land in the upland area should not be made to Indians. The whole area has now been given out, and the Government of India claim that there is no land left to which Lord Elgin's decision applies. This decision has now, however, been extended so as to prohibit the transfer of land in the uplands to non-Europeans

(d) **IMMIGRATION.**—Suggestions have been put forward for restricting Asiatic immigration into Kenya. The Government of India claim that there is no case for restricting Indian immigration and that such restrictions would be in principle indefensible

THE SETTLEMENT.—The decisions of the British Government were contained in a White Paper presented to Parliament in July 1923. It was held that the guiding principle should be that the interests of the African native must be paramount, and in light of this it was decided—

(a) **FRANCHISE.**—A communal franchise was adopted with 11 seats for elected Europeans, 5 elected Indians, one nominated Arab one missionary representing the Africans, and a nominated official majority. One Indian is also appointed on the Governor's Executive Council

(b) **SEGREGATION.**—The policy of segregation as between Europeans and Asiatics is also done

(c) **THE HIGHLANDS.**—The existing practice is maintained both as regards initial grants of and transfers. A similar reservation in the low lands is offered to Indians

(d) **IMMIGRATION.**—Racial discrimination in immigration regulations is rejected. But in the economic interests of the Africans, further control over immigration is necessary. Some arrangement is required for securing a strictly impartial examination of applications for entry into Kenya. The Governors of Kenya and Uganda have been instructed to submit joint proposals for legislation

The Government of India reviewed their decisions in a resolution published on August 18th, 1923, and recorded "their deep regret that His Majesty's Government did not feel justified in giving greater effect to the recommendations made by them" and reserved liberty to reopen the case on a suitable opportunity. They stated their intention of making representations regarding the action to be taken to implement these decisions, particularly in the matter of the immigration regulations

Following upon the Kenya award statutory action was taken by the local administration on the franchise question. Adult suffrage on communal lines was conferred upon Indians. As regards immigration, the Government of India took the opportunity to urge the postponement of the bill giving effect to the decision of His Majesty's Government until such time as the Committee proposed by their representatives at the Imperial conference in 1923 had an oppor-

tunity of examining the question of the restrictions therein embodied. Accordingly the introduction of the bill was postponed at the instance of the Colonial Secretary. The Government of Kenya was also asked by His Majesty's Government for an explanatory statement regarding the method proposed for the administration of immigration measures. The Government of India received an assurance from the Colonial Secretary that ample opportunities would be afforded for the expression of their views, and that earnest attention would be given to any representation which their Committee desired to make. As has already been stated such a Committee was appointed in March 1924. The following statement made by the Secretary of State for the Colonies in the House of Commons on 7th August 1924 shows the result of the representation made by the Colonies Committee—

(1) **IMMIGRATION.**—My position is that if danger ever arises of such an influx of Indian labour, of whatever class, race, nationality or character as may likely be prejudicial to the economic interest of the natives, I hold myself entirely free to take any action which may be necessary. Conflicting statistics which have been laid before me have not enabled me to reach a definite conclusion as regards the extent of net Indian immigration. Accordingly steps will be taken to create a statistical department to obtain accurate information with regard to persons of all races arriving in or departing from Kenya. Meanwhile the Kenya Immigration Ordinance will not be enacted

(2) **FRANCHISE.**—I have given careful consideration to representations in favour of a common poll but I am not prepared to reach the conclusion already arrived at that in the special circumstances of Kenya, with four diverse communities, each of which will ultimately require electoral representation, the communal system is the best way to secure the fair representation of each and all of these communities

(3) **HIGHLANDS.**—I consider that the Secretary of State for the Colonies has no alternative but to continue pledges expressed or implied which had been given in the past, and I can hold out no hope of the policy in regard to agricultural land in the Highlands being reconsidered

(4) **LOWLANDS.**—It was proposed to reserve an area in the lowlands for agricultural immigrants from India. The Committee made it plain that it is averse from any reservation of land for any immigrant race, subject to the suggestion that before applications for land in lowland areas are invited an opportunity should be taken of sending an officer experienced in Indian settlement and agricultural methods to report on the areas. At present any consideration of the matter is in suspense pending receipt from the colony of reports from the native and agricultural points of view on the areas in question

With regard to the announcement in connection with Lowlands the question of deputing an officer to examine these areas was considered by the Government of India who thought it inadvisable to proceed any further with the idea

The work of the Colonies Committee did much to abate the bitterness which existed in the relations between the different classes of settlers in Kenya and the situation was further improved by the decision of the Indian community to relinquish their attitude of non-co-operation and to select five members for nomination by the Governor to the Legislative Council.

In June 1924 His Majesty's Government announced the appointment of an East African Committee under the Chairmanship of Lord Southborough to consider and report on certain questions regarding the administration and economic development of British East African dependencies. Since this enquiry was likely to affect Indian interests, the Government of India urged that the Indian point of view should be heard before the Committee came to any conclusions. This request was granted but further action in the matter was suspended, pending the publication of the report of the Commission provided over by Major Ormsby Gore which visited East Africa to enquire into certain aspects of the questions referred to the Southborough Committee. The report of the Ormsby Gore Commission was published in the United Kingdom on May 7th 1925. On June 9th, Major Ormsby Gore announced in the House of Commons that in view of the completeness of the report presented by the Commission which under his chairmanship had visited East Africa His Majesty's Government had decided that the Southborough Committee should not resume its sittings.

In November 1926 information reached the Government of India that the Government of Kenya contemplated undertaking legislation at an early date in order to make the European and Indian communities responsible for the not cost of their education. It was originally intended to give effect to this decision by levying from Europeans a tax on domestic servants in their employ and from Indians a poll tax. The Indian community resented this differentiation and ultimately the colonial Government decided that both communities should pay the same form of tax viz. an adult poll tax. For Europeans this has been fixed at 30 shillings and for Indians at 20 shillings. An Ordinance giving effect to this decision was passed by the Kenya Legislative Council and came into force from 1st January, 1927.

In view of the issue of another White Paper in July 1927 in which it was announced that His Majesty's Government had authorised the Secretary of State for the Colonies to send to Africa a special Commission to investigate the possibility of securing more effective co-operation between the Governments of Eastern and Central African Dependencies and make recommendations on this and cognate matters the question regarding the position of Indians in Kenya again came to the forefront.

The announcement excited serious apprehensions in India with regard to the future position of Indians in those Colonies. A deputation drawn mainly from both houses of the Indian Legislature also waited on His Excellency the Viceroy on the 17th September, 1927, and represented the position of Indians in East Africa. One of the suggestions made by the

deputation was that permission may be given for a small deputation appointed by the Government of India to go over to East Africa in order—

- (a) to make a general survey of these territories in relation to Indian interests therein, and
- (b) to help the resident Indian community in preparing their evidence for the Commission.

The Government of India readily accepted this suggestion and with the approval of His Majesty's Government sent Kunwar Maharaj Singh (I.F.) and Mr. R. B. Ewbank (I.K.L.S.) to East Africa. These officers visited Kenya, Uganda, Zanzibar and Tanganyika and their services are understood to have been greatly appreciated by the resident Indian communities. The personnel of the Commission was announced by the Secretary of State for the Colonies on November 14th 1927 and was as follows:—The Right Hon. Sir Edward Hilton Young, P.C. G.B.E. D.S.O. D.C. M.P. (Chairman), Sir Reginald Mant, K.C.I.E. C.S.I. Sir George Schuster, K.C.M.G. G.B.E. M.C. and Mr. G. H. Oldham, Members with Mr. H. F. Downie (Secretary). The Commission left Fuzul on December 22nd 1927 and travelled via the Nile to Uganda, and thence to Kenya, Tanganyika, Zanzibar, Nyasaland and Northern Rhodesia, visiting the chief centres and hearing the views of representatives of different sections of the community. The Commission also visited Salisbury for the purpose of conferring with the Government of Southern Rhodesia. The report of the Commission was published on the 18th January 1929.

It was examined by the Government of India in consultation with the Standing Emigration Committee of the Indian Legislature and with prominent representatives of all Parties in the Legislative Assembly who were not members of the Committee. The tentative conclusions reached by Government on the main recommendations in the Report were set out in a telegram to the Secretary of State for India of the 19th March 1929 which was published in India in September 1929.

In March 1929 the Secretary of State for the Colonies sent out Sir Samuel Wilson, Under Secretary of State for the Colonies to East Africa to discuss the recommendations of the Hilton Young Commission for the closer union of Kenya, Tanganyika and Uganda (and such possible modification of these proposals for effecting the object in view as may appear desirable) with the Governments concerned and also with any bodies or individuals representing the various interests and communities affected with a view to seeing how far it may be possible to find a basis of general agreement. Sir Samuel was also directed to ascertain on what lines a scheme for closer union would be administratively workable and otherwise acceptable and to report the outcome of his consultations. At the invitation of the Secretary of State for the Colonies the Government of India deputed the Rt. Hon. V. S. Srinivasa Sastri P.C. to East Africa to help the local Indian communities to state their views to Sir Samuel Wilson on matters arising out of the Hilton Young Commission's Report and to be at Sir Samuel Wilson's disposal if he wished

to make use of him in dealing with the Indian deputations

Mr Saxtil left India in April and returned in June 1929. In the Report presented by him on his return he recommended that the Government of India should —

- press for inquiries as to the basis of a civilisation franchise which shall be common to all races alike
- invoke the good offices of the Colonial Office and of the Government of Kenya in securing the consent of the European Community to the establishment of a common roll
- oppose the grant of responsible government to Kenya or of any institutions leading up to it
- oppose the establishment of a Central Council on the lines proposed by Sir Samuel Wilson
- demand in case of the establishment of some such body that the unofficial representatives from each province should include an adequate number of Indians
- advocate the continuance of the official majority in the Legislative Council of Kenya
- demand that the representation of natives in the Kenya Legislative Council should be by natives or by Europeans and Indians in equal proportions

In September 1929 the Indian Delegation from East Africa was received by Sir Fazl-i-Husain, Member in charge of the Education, Health and Labour Department of the Government of India at Simla. The delegation was represented by Mr J. B. Pandya, Mr O. P. Jais and Mr Iswar Das from East Africa and Pt. H. N. Kunzru and Sir Lushotomias Phakurda, M.L.A.s, Sir Frank Koyce, Secretary, and Mr A. B. Reid, Joint Secretary in the P. H. I. Department were also present.

Sir Fazl-i-Husain welcomed the delegation and requested them to tell him in what matter they wished the Government of India to help them. The delegation stated in view of the Indian Communities in East Africa on the matters arising out of the Hilton Young Commission's Report which in their judgment most vitally affected Indian interests. The statement made by the delegation related principally to the question of common franchise in Kenya the representation of the natives of the country on the Council the federation of the several territories in East Africa along the lines suggested in the report the reservation of land in Kenya for the settlement of Indians the residential segregation of Indians in Kenya the appointment of an Indian Trade Commissioner in East Africa, the improvement of educational facilities for Indians in East Africa the appointment of Indians in the higher public services there and the better political representation of Indian interests in Uganda and Tanganyika. The delegation also requested the Government of India to nominate a representative to accompany the Deputation which they propose to send to London shortly to put the Indian case before His Majesty's Government before they pass any orders on the Hilton Young Commission's Report.

Sir Fazl-i-Husain thanked the delegation for their interesting statement, but said that before he could make any statement on the attitude of the Government of India in regard to the points advanced by the delegation or reply to their request for the nomination by the Government of India of a representative to accompany the proposed deputation to London he would like the members of the delegation to attend the meeting which the Government of India had arranged to hold upon the 14th September with leading members of the Legislature and the Standing Emigration Committee so that the latter might have the advantage of hearing the delegation themselves before they advised the Government of India upon the situation. The delegation expressed their willingness to attend the meeting and then withdrew.

The after meetings of the Standing Emigration Committee were held and the decision arrived at by the Government of India was communicated to His Majesty's Government.

The report of Sir Samuel Wilson was published on the 21st October 1929. Another meeting of the Standing Emigration Committee was held soon thereafter to consider the report and a further communication was addressed to His Majesty's Government on the subject.

The question of the future Government of East Africa is now being considered by His Majesty's Government on whom the Government of India have impressed the keen interest which in this question by all communities in India and the importance of having due regard in their treatment of this matter to legitimate Indian claims.

During the year 1927 another matter which engaged Government and the public in India was the report of the local Government Commission which was appointed by the Governor of Kenya in July 1926 to make recommendations as to the establishment or extension of local Government for certain areas in the colony. The report of the Commission was submitted to the Governor of Kenya in February 1927. The recommendations made were numerous and so far as Indians were concerned they involved a decrease in the proportion of Indian representation on the local bodies at Nairobi and Mombasa and the creation of a European elected majority in both places. This caused resentment among Indians in the colony and resulted in the abstention from the Legislative Council of four out of five Indian representatives. The Government of India submitted representations to His Majesty's Secretary of State for India on the subject.

In 1928 the Local Government (Municipalities) Ordinance was passed. This amended the law relating to Municipal Govt in Kenya to provide for the nomination of 7 municipal Indian members against 9 European Members to be elected in Nairobi and for the nomination to the Municipal Board of Mombasa of an equal number of European and Indian Members viz 7.

(3) **Fiji and British Guiana.**—Emigration to Fiji was stopped in 1917 under Rule 18 (b) of the Defence of India (consolidated) Rules in pursuance of the general policy of stopping recruitment under the indentured system of emigration. With a view to secure if possible, a renewal of emigration to the Colony

an unofficial mission composed of the Bishop of Polynesia and Mr Rankine, Receiver-General to the Fiji Government, arrived in India in December 1919, and submitted a scheme of colonisation which was referred to a committee of the Imperial Legislative Council on 4th February 1920. To secure a favourable reception for the mission the Fiji Government cancelled all outstanding indentures of East Indian labourers from 2nd January 1920, and also announced their intention to take early measures to provide for the representation of the Indian community on the Legislative Council on an elective basis by two members. In accordance with the recommendations made by the Committee the Government of India informed the mission in March 1920, that they would be willing to send a Committee to Fiji provided that the Government of Fiji and the Secretary of State for the Colonies would guarantee that the position of the emigrants in their new home will in all respects be equal to that of any other class of His Majesty's subjects resident in Fiji. In July 1920 the Government of Fiji informed the Secretary of State for the Colonies of their willingness to give the pledge subject to his approval. Arrangements with regard to the contemplated deputation however were postponed until January 1921, owing to the announcement of Lord Milner's policy in regard to Indians in Kenya, and the desirability of consulting the new Legislature in India. After consultation with the Fiji Government as to the terms of reference and personnel of the deputation, an announcement was made on the 27th June 1921. But owing to the inability of the two Indian members Messrs Srinivasa Sastri and Hridaynath Kunzru who had been nominated to join the Committee which as finally constituted consisted of Messrs Venkateswari Raju, G. L. Corbett, Govind Bahadur Sharma, and Lieutenant B. Hissar ud din Khan, did not reach Fiji until the end of January 1922.

The labour troubles in Fiji in the years 1920-21 had produced an unexpected result in India. The Government of Fiji cancelled the indentures of Indian labourers as from January 1920 while arrangements were made for the early repatriation of such of them as desired to return to their own country. In consequence, large numbers left Fiji. Many arrived in India comparatively destitute while others who were colonial born or whose long residence in the colonies had rendered them unfit for the old social conditions found themselves utterly out of place—indeed foreigners—in their own country. Returned emigrants from other colonies also being in difficulties owing to the unfavourable economic situation in India strongly desired to return to the territories from which they had come. During the early part of 1921 from all parts of India there was a steady drift of destitute and distressed labourers in the direction of Calcutta where they hoped to find ships to take them back to the colonies in which they were certain of work and livelihood. At the earnest representation of the Fiji Government, and after full consultation with representative public men, arrangements were made to relax the emigration restriction in favour of those Indians who were born and had property in any colony, as well as of such near relations as they desired to take with them. Admirable work was done among

these distressed persons by the Emigrants Friendly Service Committee which had been formed primarily to deal with the applications of repatriated Indians desirous of returning to Fiji. The Government of India gave discretion to this Committee to permit persons who could prove that they had been in Fiji to return there if they so desired. The local labour conditions stimulated the return of these unfortunate people by giving them assisted passages. The Legislative Assembly had made a grant of £1,000 for the maintenance of these labourers, until such time as they were able to find work and settle down in India. The deputation from India left Fiji on the 3rd April 1922, and submitted its report to the Government of India. It has not been published.

In February 1920, Letters Patent under which the constitution of the Fiji Legislative Council was revised were issued. Provision was made *inter alia*, for the election of three Indian members on a communal basis. On the 4th November 1922 one of the Indian members moved a resolution recommending the adoption of a common electoral roll in place of the existing communal one. The resolution was supported by the three Indian members and opposed by the rest of the Council including the elected European and nominated Fijian members. As a protest against this vote, all three Indian members resigned their seats and these have remained unfilled, no Indian having hitherto offered himself for election.

British Guiana.—The Indian population in this colony belong almost entirely to the labouring classes and their grievances are mainly economic. Towards the end of 1919 a deputation consisting of the Hon'ble Dr J. J. Nunn, Attorney General, and Mr J. A. Luckhoo, a prominent Indian who was a member of the combined court visited India to put forward a scheme for the colonisation of British Guiana by means of emigration from India. This was examined by a Committee of the Indian Legislature, which advised that a deputation be sent from India to investigate conditions on the spot. Owing to certain unforeseen circumstances it was not found possible to proceed with the proposal until 1922 when a deputation consisting of Messrs Pillai, Keatinge and Tivary visited British Guiana. Mr Keatinge was a former member of the Indian Civil Service who had retired from the post of Director of Agriculture, Bombay. Diwan Bahadur P. Kesava Pillai, was an elected member of the Madras Legislative Council of which he was also Vice President, and Mr Tivary was a member of the Servants of India Society who had done considerable amount of Social Welfare Work among the Depressed Classes in the United Provinces. The two reports of the deputation were published on the 21st of January, 1924. Towards the end of the month a deputation from the Colony of British Guiana consisting of Sir Joseph Nunn, Kt, and the Hon. Mr J. C. Luckhoo, K.C., arrived in India for further discussions. The Standing Emigration Committee of the Indian Legislature eventually reported that while they would be inclined to view with favour the colonisation scheme put forward by the deputation, they would before making any definite recommendation, like the Government of India, to depute an officer to British Guiana to report on certain

matter. Kunwar Maharaj Singh, M.A., C.I.E. Bar-at-Law, was deputed for this purpose. He proceeded to that Colony in September 1925. His report was received on February 1st, 1926, and published. He made certain criticisms and suggestions and the whole matter was thus satisfactorily settled. The colonisation scheme has not yet come into operation as the Colonial Government are not in a position at present to afford the cost which it involves.

In March 1928 following special inquiries by the Colonial Office reports appeared in the press that a bill had been introduced in the House of Commons empowering His Majesty's Government to alter the constitution of British Guiana by Order in Council. The Government of India consulted in the matter the Standing Emigration Committee of the Indian Legislature and are now watching events.

(4) **Other Parts of the Empire**—The changes eventually introduced by the British Guiana (Constitution) Order in Council 1928 did not involve any differentiation against Indians and did not in any way infringe the provisions of the special declaratory Ordinance which was passed by the Colonial Government in 1923 and which confers equality of status on all persons of East Indian race resident in the Colony. In Ceylon, Mauritius and Malaya, the position of Indians has on the whole been satisfactory and the matters have gone smoothly. The Government of India have now appointed their own Agents in Ceylon and Malaya. The question of the fixation of a standard minimum wage for Indian Estate labourers in Ceylon and Malaya has been the subject of negotiations between the Govt. of India and the Colonial Governments ever since the emigration of Indian labour to the Colonies for the purpose of unskilled work was declared lawful in 1923 under the provisions of the Indian Emigration Act 1922. So far as Ceylon is concerned a settlement satisfactory to the Govt. of India and that of Ceylon has been arrived at, i.e. the standard wage and other outstanding questions affecting the interests of the labourers and the draft legislation to give effect to it was passed by the Ceylon Legislative Council in December 1927 as Indian Labour Ordinance No. 27 of 1927. The Standard Rates of Wages agreed upon have been introduced with effect from the 1st January, 1929. In regard to Malaya, Standard Wage Rates which are considered suitable by both the Indian and Malayan Governments have been introduced in certain areas and the question of their extension to the rest of Malaya is engaging attention.

The rates so fixed were, however, reduced by 20 per cent with effect from the 5th October 1930 owing to acute depression in the rubber trade. The position is being watched by the Government of India and it is hoped that the rates originally agreed upon will be restored as soon as the present crisis has passed.

In April 1924, the Government of Mauritius requested that emigration to the Colony might be continued for a further period of one year but the Government of India in consultation with the Standing Committee on Emigration decided that consideration of the request should await the results of a local investigation. The Government of Mauritius agreed to receive a

officer for the purpose and to give him all facilities, and in December, 1924, an Indian Officer of Government, Kunwar Maharaj Singh, left India to conduct the necessary inquiry.

Kunwar Maharaj Singh's report was published by the Government of India in August 1925. The various recommendations made in the report have been commended to the consideration of the Colonial Government.

In February 1926 the Government of India received a reply from the Colonial Government stating that they accepted the main conclusion formulated by Kunwar Maharaj Singh in regard to the removal of emigration to Mauritius, etc., that no more unskilled Indian labour should be sent to Mauritius either in the immediate or near future. With regard to Kunwar Maharaj Singh's suggestions relating to other matters of interest to the Indian population now residents in the island the Colonial Govt. expressed their willingness to give effect to several of them.

The present position of Indians in the Dominions is that under the Canadian Dominion Letters Patent Indians domiciled in Canada enjoy the full franchise in eight out of the nine provinces. In New Zealand Indians enjoy the franchise on the same footing as all other British subjects. In Australia a Bill was introduced in the Commonwealth Senate on the 12th June 1925 amending sub-section (5) of section 38 of the Commonwealth Electoral Act 1918-24, by adding after the words "And" the words, "except British India." This measure gives the Commonwealth franchise to subjects of British India at present domiciled in Australia and is the fruition of the hopes held out by the Commonwealth Government to Mr. Baskin on the occasion of his visit to Australia in 1912. The Bill was passed by the Senate and under it the Indians will enjoy both the State and Commonwealth franchise throughout Australia except in Queensland and in Western Australia where Indians do not enjoy the suffrage in respect of election for the Lower House. By Acts which have recently been passed by the Commonwealth Parliament British Indians in Australia have been admitted to the benefits of Invalid and Old Age Pensions and Maternity allowances from which they were hitherto excluded as Asiatics. Old Age Pension is payable to men above 65 years of age, or above 60 years provided such persons are of good character and have resided continuously for at least 20 years. An Invalid Pension is obtainable by persons who being above 16 years of age and not in receipt of an Old Age Pension, have whilst in Australia, become permanently incapacitated for work by reason of an accident or by reason of being an invalid or blind, provided they have resided continuously in Australia for at least five years.

Maternity allowance to the amount of £5 is given to a woman of every child to which she gives birth in Australia, provided the child is born alive and the woman is an inhabitant on the Commonwealth or intends to settle there. This Legislation removes the last grievance of the Indian community in Australia which was remediable by the Federal Government. In Western Australia and Queensland they are still subject to certain disabilities of which exclusion from the State franchise, is perhaps the most important.

Indians in Great Britain.

Some seventy years have gone by since the Parsee community, in the persons of the late Dadabhai Naoroji and other members of the firm of Cama & Co., led the way in the sojourn of Indians in England for business purposes. This lead it has since maintained, though there are both Hindu and Mahomedan business men firmly established there. Nor are the professions unrepresented for there are in London and elsewhere practising barristers, solicitors and medical men of Indian birth. The number of the latter, especially Parsees, is considerable. Three Indians (all belonging to the Parsee community) have sat in the House of Commons. Since 1910 four Indians—the late Mr. Amoor Ali the first Lord Sinha the late Sir Binode Bihari Mitter and Sir Dinshaw Mulji have served on the Judicial Committee of the Privy Council. Three Indians are on the Secretary of State's Council. In 1919 the late Lord Sinha was the first Indian to be raised to the peerage and to be appointed a member of the Home Government. In the spring of 1923 Mr. (now Sir) Dadabhai Dalal was appointed High Commissioner for India being the first Indian to hold the office. He resigned towards the end of 1924 to be succeeded by Sir Atul Chatterjee previously a member of the Government of India. The early years of the present century saw the gathering of a new Indian element in permanent residence—that of retired officials and business men, or people of independent means who from preference or in order to have their children educated in England, leave the land of their birth and seldom if ever visit it again. Further the stream of Indian summer visitors includes wealthy people who come regularly. Sectionally the only Indian community to be fully organised is that of the Parsis. They have an incorporated and well-endowed Parsi Association of Europe. Its centre Zoroastrian House 11 Russell Road West Kensington opened in 1920 includes a room devoted to ritual and ceremonial purposes a reading room and library and rooms for social intercourse. The Arya Bhavan a home for orthodox Hindus visiting London was opened at 30 Bevis Park Hampstead in the summer of 1928. Indian business interests have been organised by the formation of the Indian Chamber of Commerce in London with Offices at 43 New Broad Street E.C. 2. The East India Association (4 Victoria Street S.W. 1) established in 1867 provides a non-partisan platform for the discussion of Indian problems and exists to promote the welfare of the inhabitants of India. The British Indian Union (10 Grosvenor Gardens, W. 1) under the presidency of H. R. H. the Duke of Connaught and with Lord Reading as Chairman, is a valuable agency for promoting friendship and understanding between the people of Great Britain and India.

India House

In March, 1930 the office of the High Commissioner for India was transferred from the inadequate premises in Grosvenor Gardens to the new India House in Aldwych, erected and furnished at a cost of £324,000. The design

of this noble building which has a frontage of about 130 ft. opposite the Waldorf Hotel, was the work of Sir Herbert Baker A.R.A. with Dr. Oscar Faber as consulting engineer. Although expression of the Indian character of the building is mainly found in the interior the architect has given to the details of the external elevation by means of carving heraldry and symbolism an individuality that proclaims it the London house of India. Including basement and mezzanine floors there are twenty floors in all the available space for internal work alone being between 50,000 and 60,000 ft. The total height from the lower level in the courtyard on the Strand side to the roof is about 130 ft.

On the ground floor there is a great hall for exhibits of the products and art wares of India. This hall is carried up two floors the upper floor being represented by a wide gallery and on either side of the exhibition hall there are recesses after the style of an Indian bazaar for special exhibits. From the octagonal entrance hall a great public staircase leads to a gallery round the octagonal hall on the first floor. This gallery in its turn leads to a high vaulted library and reception rooms and the central portion of the library provides accommodation for large receptions on special occasions.

The staircase exhibition hall octagonal hall and library markedly express the Indian character of the building. The walls of the staircase and the halls are of red stone similar in appearance to the Agra and Delhi sandstone carved and pierced in the geometrical patterns of the *jali* in Indian architecture. Such of the carving as could be completely separated from the structure was actually worked at New Delhi by Indian workmen from Makrana marble. The use throughout of Indian hardwoods chiefly gurgan for flooring obviates the need for any floor covering. From basement to roof scarcely any wood of non-Indian origin was employed for panelling and decorative purposes in all parts of the great building. Silver grass, *koko*, laurel and the beautiful dark red padouk have been used. The domes and vaults of the building were designed for effective decoration for which the services of specially selected Indian artists were obtained. The water supply is entirely independent of municipal services being obtained from two artesian wells sunk some 460 ft. below the basement where the central heating apparatus is installed.

The Indian Trade Commissioner and his staff are at India House, with all other departments of the Office of the High Commissioner excepting the Stores Department which is at the depot off the Thames at Helvedere Road Lambeth.

The Students

Under normal conditions it is the student community which constitutes the greatly preponderating element and creates an Indian problem. Its numbers multiplied ten or twelve fold in the quarter of a century before the war. After a very considerable temporary check

caused by the Great War the number rapidly expanded from 1915 in spite of pressure on college accommodation. In addition to the ordinary graduate or under-graduate student, there are some youths of good family, including heirs of Indian States, admitted into our public schools, such as Eton and Harrow. There are over 800 Indians at the Inns of Court. Since the war there has been a welcome increase in the number of technical and industrial students. Altogether including technical and medical students, there are fully 2,000 young Indians (some five per cent of them women) in London, Edinburgh, Cambridge, Oxford, Glasgow, Manchester, Birmingham, Leeds, Sheffield, Liverpool and a few other centres. London absorbs about half the total.

The Advisers

It is well known that until a few years ago the young Indian apart from inadequately supported unofficial effort and the chance of coming under the influence of English friends of their families were practically left to their own devices. But in April 1908 Lord Morley, created for their benefit a Bureau of Information and appointed Dr (now Sir) T. W. Arnold to the charge of it under the title of Educational Adviser. The Bureau was located at 21, Cromwell Road, together with the National Indian Association and the Northbrook Society, which were thus given spacious quarters for their social work among the young men in India the provincial advisory committee to help and advise intending students, have been replaced in some instances by University Committees. The work of the Bureau rapidly expanded, and in consequence Lord Crewe in 1912 re-organised the arrangements under the general charge of a Secretary for Indian Students. Mr (now Sir) C. E. Mallet who resigned at the close of 1916. He was succeeded by Dr Arnold under the designation of Educational Adviser for Indian Students to the Secretary of State. Mr N. C. Sen followed Dr Arnold as Local Adviser in London. At Oxford the Local Delegation and at Cambridge the Inter Collegiate Committee have been instituted to deal with Oriental students generally whilst Local Advisers for Indian students have been appointed at Manchester, Edinburgh and Glasgow.

These arrangements underwent far-reaching revision in the autumn of 1920 in connection with the setting up, under the Act of the previous year of a High Commissionership for India in the United Kingdom. The "agency" work Sir William Meyer took over from the Secretary of State included that connected with Indian students. Sir T. W. Arnold accepted an appointment long pressed upon him as Professor of Arabic at the School of Oriental Studies, and the High Commissioner appointed Mr N. C. Sen and Dr Thomas Quayle as Joint Secretaries for the Education Department. The administrative work hitherto divided between the India Office and 21 Cromwell Road, was consolidated at the offices of the High Commissioner, thereby obviating a good deal of duplication of files and papers. Dr Quayle is now Secretary in the Education Department of the Office of the High Commissioner and his colleagues Mr K. F. Dutt

The whole situation was investigated by a committee of inquiry which sat in 1921 under the chairmanship of Lord Lytton. Arrangements had been made for the Committee to continue their investigations in India in the cold weather of 1921-22, but were abandoned in consequence of the refusal of the Legislative Assembly to vote the necessary grant. This largely accounts for the somewhat tentative form of the recommendations of the unanimous report published in October 1922. The opinion was expressed that the only permanent solution of the problem is to be found in the development of education in India. Attention was invited to the diminution of the number of Indian students proceeding abroad that would result from giving effect to recommendations made for such development by previous commissions, and by the establishment of an Indian Bar. The Committee held that it should be possible to secure admission both to British universities and subject to certain reservations to the works of manufacturing firms in Great Britain for all Indian students competent to profit by the facilities afforded. It provided that some machinery existed to ensure their distribution to the places best suited to their requirements. Subsequently a committee presided over by Sir Edward Chamberlain recommended the creation of Indian Bars which should have the effect of much reducing the number of Indians going to the Inns of Court. An Act for the purpose was passed by the Indian Legislature in 1926.

The students have hosts of non-official friends and helpers and the report suggested that there should be a conference of representatives of all organisations interested in the social and intellectual welfare of young Indians in Great Britain to discuss the best means for co-ordinating their efforts. Accordingly the High Commissioner held a conference in July 1925, when plans were formulated to help to meet the needs of students more particularly in respect to suitable boarding accommodation in London. The subject had been previously discussed at a meeting of the East India Association (April 27, 1925) when a paper was read by Mr F. H. Brown. The conference came to the conclusion that since non-official effort admittedly does not meet the need fully the hostel and club at 21, Cromwell Road, should be maintained, more particularly to provide accommodation for new comers. A small committee with Mr A. D. Bonarjee (Warden of 21, Cromwell Road) as Secretary was established to assist students in obtaining suitable accommodation. The increasing number of students coming from Indian States raises the question whether the time has not come for provision to be made for them on lines similar to those adopted by the Education Department of the Office of the High Commissioner. The Standing Committee of the Chamber of Princes has a skeleton organisation in London. The Mysore State opened last year an agency office at Grand Buildings, Trafalgar Square and appointed a permanent Trade Commissioner.

Under the presidency of Lord Hawke an Indian Gymkhana Club in 1921 acquired its own sports ground at Osterley, the total cost of purchase and equipment being estimated at £15,000. Generous gifts were

made by some Ruling Princes and others, particularly the Maharaja of Patiala, but further help is required. The cricket eleven of the Club has an excellent record in matches at Lords and the Oval and with suburban clubs.

A notable development of 1920 was the opening of the Red Triangle Shakespeare Hut in Bloomsbury, off Gower Street, as a union and hostel for Indian and Ceylonese students up to the number of 500. The hostel was removed to permanent premises 106-112 Gower-street, close to University College in the autumn of 1923. It is Indian both in conception and control, the warden and committee being responsible not to the National Council of Y M C A in London but to the Indian National Council in Calcutta. While the organisation has a definitely moral

and spiritual as well as a social purpose, it is not a proselytising agency. There is a steady average of some 550 members, and the hostels are exceptionally fortunate in securing the voluntary services of men and women of great distinction in many fields for the regular Sunday afternoon and other lectures. The cost of building and furnishing has been met and the question of extending the hostel accommodation is under consideration.

There has been some recent development in the matter of periodical literature devoted to India. A monthly entitled *India* pays special attention to the social side of British life in India and Sir Albion Banerjee edits and owns a quarterly entitled *Indian Affairs*. There are various political organisations connected with India.

SOCIETIES AND INSTITUTIONS IN LONDON CONNECTED WITH INDIA

BRITISH INDIAN UNION—Promotes friendship and understanding between the two races
10, Grosvenor Gardens S W 1 *Secretary* Major T Moss

CENTRAL ASIAN SOCIETY—77 Grosvenor Street W 1—*Hon Secretaries* Major General Sir William Beynon, K.C.I.E., Colonel H Stevens

EAST INDIA ASSOCIATION—To promote the welfare of the inhabitants of India, chiefly by lectures and discussions. 3 Victoria Street, S W 1, *Hon Secretary* F H Brown, C.I.E.

INDIA SOCIETY—(The study of the arts and letters of India) 3, Victoria Street, S W 1, *Hon Secretary* F J P Richter M.A.

INDIAN STUDENTS UNION AND HOSTEL—112, Gower Street, W C 1 *Chairman* Dr Edwyn Bevan

INDIAN CHAMBER OF COMMERCE IN GREAT BRITAIN—85 Gracechurch Street, E C 3 *Secretary* A H Mann

INDO-BRITISH MUTUAL WELFARE LEAGUE—*Joint Hon Secretaries* Mrs Hannah Sen and Mrs C Hegler (53, Elsworthy Road N W 3)

INDIAN GYMKHANA CLUB—Thornbury Avenue Osterley. To promote the physical wellbeing of Indian students. *Secretary* Captain W R B Berry, 10, Kings Bench Walk, Temple E C 4

NATIONAL INDIAN ASSOCIATION—(Chiefly aims to promote the welfare of students) 21, Cromwell Road S W 7, *Secretary* Miss E J Beck

NORTHBROOK SOCIETY—(Makes grants to deserving Indian students) 21, Cromwell Road, S W 7 *Hon Secretary* E Oliver

ROYAL ASIATIC SOCIETY—(Research in the history and antiquities of Asia) 74 Grosvenor Street W 1, *Secretary* Mrs E W Fraser

ROYAL EMPIRE SOCIETY—(Formerly Royal Colonial Institute) Northumberland Avenue W C 1 *Secretary* George Pilcher

ROYAL SOCIETY OF ARTS (has an Indian section before which lectures are delivered) on industrial historical and commercial questions 18 John Street Adelphi *Secretary* G K Menzies M.A.

ROYAL INSTITUTE OF INTERNATIONAL AFFAIRS, Chatham House, 10, St James Square, S W 1 *Secretary* Stephen King Hall

PARSEE ASSOCIATION OF EUROPE—London, Zoroastrian House, 11 Russell Road, Olympia W 14 *Hon Secretary* Syttama Cama

STUDENT CHRISTIAN MOVEMENT OF GREAT BRITAIN AND IRELAND—*Secretary* R O Mackie, Annandale, North End Road Golders Green, N W 11

VICTORIA LEAGUE—81 Cromwell Road S W 7 *Secretary* Miss Gertrude Drayton, C.B.E.

Sport.

Sport as everything else suffered considerably during the year 1930 owing to the political troubles of the country. The chief disappointment was the postponing of the visit of the second M C C cricket team to India. Arrangements were well in hand and the itinerary for the tour had been completed when it was decided by the Working Committee of the Congress to boycott the cricketers and all the matches in which they played. Sensing the trouble that was sure to arise should the visit materialise the Indian Cricket Board of Control wisely advised the M C C cricket authorities to postpone the tour for a year or so which was done. It is possible that India will have an opportunity of renewing the acquaintance with the English cricketers this year.

A further disappointment was in store for cricket enthusiasts when in addition to the M C C tour being postponed it was decided also to dispense with the Bombay Presidency Quadrangular cricket matches. This was the first time in the history of the tournament that political influences caused this important series of matches to be cancelled. The move for the abandonment originated at the Hindu Gymkhana in Bombay which sent out a circular that until the political situation improved they neither could nor would play any cricket either inter-club or even participate in the Quadrangular tournament. Realising that without the Hindus Bombay's annual feast of cricket would lose much of its flavour it was decided to do away with the festival altogether.

But thanks to the enterprise of the Maharaj Kumar of Valsanagram the two most famous cricketers in the world, Jack Hobbs and Herbert Sutcliffe came to India at the Maharaj Kumar's invitation to complete a team which he had got together to tour India and Ceylon. Under his captaincy the team comprising some of the finest cricketers in India and Hobbs and Sutcliffe were unbeaten in all their matches. The aristocracy of the Englishmen with the bat was much appreciated by cricket enthusiasts who flocked in their thousands to see them in action. Interviewed by a press representative after the completion of the tour Hobbs said that he was surprised at the standard of cricket in India and ventured the prophecy that with more expert coaching this country could produce men who would command a place in a world team. He particularly mentioned Capt. C. K. Naidu and Gulam Mohammed. Sutcliffe too was equally lavish with his praise with all that he had seen in India, and the many fine cricketers he had come across. The one fault that the visitors found in this country was the practice of giving away prizes for the successful sportsmen, this was a habit greatly to be deprecated and not in the best interests of sport. This however is an old grievance of all sportsmen, particularly cricketers who come to India from England. It is gradually being done away with however although it is bound to be some time before the practice is entirely eliminated.

Apart from the above events in the cricketing world India had rather a lean time, at cricket at any rate. A number of tournaments were

run in various parts of the country and proved very popular although none reached the proportions of first class cricket with the exception of the Northern India Quadrangular Cricket Tournament played at Lahore.

The big event in the tennis world was the visit of an English tennis team. Encouraged by the success of the tour in 1929 when the French players toured India the Calcutta South Club with commendable initiative and backed up by the principal tennis clubs of this country sent an invitation to the British International Lawn Tennis Club to send to India a fully representative side. This invitation was readily agreed to by the authorities in England and towards the end of the year the team arrived under the captaincy of Mr. A. Wallis Myers and consisting of Messrs. J. B. Oliver, W. H. Austin, M. D. Horn and E. D. Andrews. The latter player had been to India before and was therefore well acquainted with the conditions. Their visit gave a wonderful fillip to the game all over the country and they were received with enthusiasm wherever they played and while it showed that India has not yet the players of their calibre many lessons were learnt from their play and Indian tennis will accordingly soon be on the up-grade. The stroke play of Austin particularly was much admired. At each centre the team visited the International Lawn Tennis Club flag was unfurled. At the conclusion of the tour Mr. Wallis Myers gave his impressions of his visit. He paid a tribute to the tactical acumen of Slesman and spoke highly of Ahmad Hussain and Miss Irfan Row. In passing it may be mentioned that Miss Row has been chosen to represent India at Wimbledon this year.

He considered that India possesses players of undoubted merit whose footwork is second to none in the world but their style needs a little polish to shine in the best company. Mr. Myers thought that the grass courts in Bengal and the Punjab were excellent.

Sport all over India continues to make progress, especially from an organisation point of view. It is at last realised that sports should be well organised to get the best out of it. Many organisations are springing up notably among the various railways each with their separate ruling bodies. The Railway Athletic Association is indeed a live body, and is a great asset in the sporting life of the community, especially among the many thousands of railwaymen. Their football, hockey, boxing and athletics championships are the leading events of the sporting world in this country.

The Indian Board of Cricket Control is truly alive to its responsibilities, and has tentatively arranged for a tour to England of Indian cricketers in 1932 with at least one test match. This is a move in the right direction, and will put this country on the map so far as cricket is concerned. It can now be assumed that Test Match status has been definitely reached.

Hockey continues to be one of the chief games played in India, and the principal tourna-

ments the Beighton Cup Calcutta, the Aga Khan in Bombay, with other lesser known tournaments all prove very successful. This country can justly claim to be the home of the game and where the real exponents play it as it should be played. It is confidently expected that India should be represented at the Olympic Games at Los Angeles in 1932 will carry all before her. A team is due to visit England some time in the future. The people of England and the Continent well remember the last visit of the team from this country who surprised them with their cleverness.

Association football still has a large following but chiefly among the military. The main tournaments the I F A Shield, the Durand at Simla, the Bovers at Bombay and the Lahore Trades Cup still create wide interest. The Indian footballers are rapidly coming to the fore, and at Calcutta crack teams such as Mohan Bagan are quite the equal of the best military side. In Western India the game progresses and the Western India Football Association had a most successful season. The gates certainly did not create a record but this was due in no small measure to the troublous times through which the country was passing. The winners of the Bovers Cup the premier event in Western India were the King's Own Scottish Borderers from Poona. The idea has often been mooted to institute again a second division of the Harwood League in Bombay. This was a recognised feature of Bombay football at one time, but it fell into bad days owing to the shortage of grounds. A definite effort however is to be made to re-start the second division in 1931. The Western India Football Association is doing good work but there is still room for more legislation throughout the length and breadth of India.

Very little progress has been made in Athletics, this is to be deplored now that India is beginning to loom large in the sporting armament. A visit was paid to India during the year by the celebrated German athlete Dr O Peltzer who touched India during his tour to Australia and New Zealand. He gave demonstrations in various parts of the country on his methods of running and in addition gave a series of lectures illustrated with lantern slides. These were well attended and aroused keen interest among athletes in the various centres he visited. India also sent an Athletic team to Japan

for the Far Eastern Games, but met with very little success. Here again the need of an efficient organisation was very apparent. The All-India Olympic Council is doing good work it is true, but it is heavily handicapped for want of money. Encouragement is chiefly left to individuals which is to be regretted.

Rugby football still has its devotees in all the big centres of the country where the tournaments at Bombay, Calcutta and Madras are well patronised. The Test in India is as popular as ever although the attendance at the larger meetings has shown a notable decline in cities like Bombay and Calcutta. This is due in large measure to the economic condition of the country. The outstanding event of the year in the racing world has been the remarkably consistent form of that celebrated horse Star of Italy owned by Sir Victor Sassoon. He has put up some wonderful performances being unbeaten, and at Calcutta won the triple crown the Viceroy's Cup, The Wellsway Plate and the King Emperor's Cup and then went to Bombay and annexed the Rajpipla Gold Cup and the C N Wadia Gold Cup.

A truly wonderful horse

Golf is being played everywhere with important tournaments held in various parts of the country notably at Gulmarg and Nasik. Yachting is still popular especially in Bombay under the auspices of the Royal Bombay Yacht Club. Races are held every Saturday during the season with one whole week devoted to a regatta. Also at Naini Tal, Poona and Calcutta one can see the white sails of the yachts much in evidence during certain periods of the year. Racquets also is played quite a lot, although it is not yet as popular as tennis to which game the Indian has taken very kindly.

Amateur boxing is flourishing especially in the Bombay Presidency, where the local organisation is doing all it can to foster the sport. Since its inception a few years the Bombay Presidency Amateur Boxing Association has made great strides and boxing is as well controlled as any sport in India. Other cities too have their tournaments, while the Military do all they can to encourage it. Professional boxing is very quiet, with an occasional tournament either in Calcutta, Bangalore or Bombay.

A summary of the chief sporting events of 1930 is given in the following pages

Racing.

Bangalore.

Bobbili Cup Distance 5 furlongs —A handicap for Arabs —

Mr Mahomed Oomer s Agent (8st 5lbs)
Rylands

H H The Maharaja of Mysore s Scimitar (9st) Hill

H H The Maharaja of Kolhapur s Brigand (7st 12lbs) Hoyt

Won by $\frac{1}{2}$ lengths, a neck Time —1 min 10 secs

H H The Yuvaraja of Mysore s Cup Distance 7 furlongs.—A handicap for Horses in Class 4 —

Haji Sir Ismail Salt s Tim Amen (8st 5lbs), Rylands

Mr Newan Sander s Vulcan (8st 7lbs), H McQuade

Mr Griffin s Brasso (7st 2lbs), Alfred

Won by 2 lengths, 1 length $\frac{1}{2}$ length —Time not taken

H H The Maharaja Mysore s Cup Distance 1 mile —

Mr J J Murphy s Dargos (9st 5lbs), Howell

Mr Mark Leslie s Ney (8st 2lbs), Behaman

Raja Parlakimedts Snowflight (7st 5lbs), Rankin

Won by a neck Time—1min 41 secs

Krishniah Chetty Cup Distance 1 mile —

Mr Edias Samarji s Marooah (7st 12lbs), Thompson

Mr Goolam Ali s Khalil Khan (8st 5lbs), Howell

Mr E H Gharala s Desert Queen (8st 5lbs), Khalil

Won by 1 length, neck Time—1 min 53 3-4 secs

Barton Cup Distance 7 furlongs —

Mr W Hayhoe s Lady Beatrice (8st 10lbs), Rylands

His Highness the Maharaja of Kolhapur s Hunter (8st 10lbs), Behajan

Mr C Newman Sander s The Victim (9st 11bs) Hoyt

Won by 2 lengths, 3 lengths 1 length Time—1 min 33 1-5 secs

Brewery Cup Distance 7 furlongs —

Mr J J Murphy s Dargos (9st 2lbs), Howell

The Nawab of Benganpello s Newcastle (8st 2lbs), Hoyt

H H The Maharaja of Mysore s Hilicot (7st 10lbs), Behaman

Won by $\frac{1}{2}$ length, 1 length, a neck Time—1min 29 2 5 secs

Griffin Plate Distance 6 furlongs —

Nawab Mir Mahdi Ali Khan s Scotch Fair (8st 6lbs) Babajan

Mrs M Clarke s Toy Girl (9st), E J Howell

The Raja of Kalikote s Palpito (8st 5lbs), Clarke

Won by 3 lengths $\frac{1}{2}$ lengths, $\frac{1}{2}$ lengths Time—1 min 16 2-5 secs

Bombay

The Rajppla Gold Cup Distance 1 mile —

Mr D Habib s Sun Arch (7st 5lbs), Marrable

Mr A Lookmanji s Atreas (8st 11lbs), Burn

H H The Maharaja of Kolhapur s Troy Ion (7st 11lbs , ear 8st), Morris

Won by 1 length, head short head Time—1 min 38 secs

The Malabar Hill Plate Distance 6 furlongs —

H H The Thakore Saheb of Wadhwan and Lt-Col Zorawar Singh s Sermon (7st 10lbs) Marrable

Mr G McElligott s Three Star II (7st 5lbs), R Stokes

Messrs Habib Esmail and N Begmahomed s Ballybrophy (7st 11lbs) N Whiteside

Won by $\frac{1}{2}$ length, neck, $\frac{1}{2}$ lengths No time taken

The Cambridgeshire Stakes (Div I) Distance 1 mile 1 furlong —

Mr P B Avasia s Facino (8st 5lbs), T Hill

Mr A S Molochbhoy s Ballinaloe (8st 2lbs), Burn

Mr B M Mehta s Kilderkia (7st 9lbs), Marrable

Won by 2 lengths, short head, 2 lengths Time—1min 54 1-5 secs

The Grand Western Handicap Distance 1½ miles —

H H The Maharaja of Rajppla s Highness (8st 4lbs) W J Sibbritt 1
 Mr Pine s Long Reign (8st 2lbs), Morris 2
 Mr Kelso s De Beers II (7st 7lbs carried 7st 8lbs), Harding 3
 Won by 1½ lengths, 2 lengths, 3 lengths Time—2mins 4 3-5 secs

The Plantation Plate Distance 6 furlongs —

H H The Aga Khan s Quincey (8st 6lbs), A C Walker 1
 Mr Pine s Puffin (7st 11 lbs), Howell 2
 Mr Eve s Saxpence (8st 2lbs) Brace 3
 Won by 1½ length ½ length ½ length

The X'mas Handicap Distance 1 mile —

H H The Thakore Sahib of Wadhwan and Lt-Col Zorawar Singh s Pandora s Box (7st 9lbs), Whiteside 1
 H H The Aga Khan s Saint Amour (7st 7lbs) Stokes 2
 Mr Eve s Roman Roue (8st 12lbs), Brace 3
 Won by ½ length head neck Time—1 min 53 secs

The Victory Plate Distance 1½ miles —

Mr W Bird s Tristan (8st 12lbs) Stokes 1
 Mr J Reynolds Poor Seats (8st 12lbs) T Hill 2
 Mr Shantidas Askuran s Tynagh (9st 2lbs) Bowley 3
 Won by 1 length ½ length, neck Time—2 mins 7 1 5 secs

The Lloyd Handicap Distance 1 mile —

Mr A O Ardesahir s Jonathan (8st 6lbs) Reynolds 1
 H H The Maharaja of Kolhapur s Arch Druid (8st 8lbs) Morris 2
 Mr Kelso s Phaze (8st 12lbs), Harding 3
 Won by 3 lengths 2 lengths 6 lengths Time—1 min 39 secs

The Turf Club Cup Distance 1½ miles.—

Mr N Mathradas Moolil (7st 9lbs), A Clarke 1
 Mr Ahmed Hazamy s Sheema (9st 11 lbs) A K Obaidi } Dead
 Mr J Chubbildas' Asavir (8st 5 lbs, } Heat 2
 carr 8st 6lbs), Khalil
 Won by 1½ lengths dead heat, 1 length Time—3 mins 19 1-5 secs

The Byoula Club Cup Distance 1½ miles.—

H H The Maharaja of Kolhapur's Cheerful Gift (7st 12lbs), R Stokes 1
 Mr Eve s Hoppy (8st 4lbs), J W Bruce.. 2

Mr P B Avnasia s Factio (8st 11lb) A C Walker 3

Won by neck, ½ length, 1 length Time—3 mins 2 3 5 secs

The Aga Khan's Cup Distance 1½ miles —

Mr A C Ardesahir s Jonathan (8st 9lbs) Reynolds 1
 H H The Maharaja of Kolhapur s Scottish Flag (7st 8lbs) R Stokes 2
 Mr H M Mahta s Kildarkin (7st), Whiteside 3
 Won by short head, head, ½ length Time—2mins 6 2-5 secs

The Colaba Cup (Div I) Distance 1 mile —

Mr J Reynolds Poor Seats (8st 11lbs), O Hoyt 1
 Mr Stone s Desert Sun (8st carried 8st 8lbs), Barnett 2
 H H The Maharaja of Kolhapur's Scottish Flag (7st 8lbs), McQuade 3
 Won by short head short head, short head Time—1 min 39 secs

The Colaba Cup (Div II) Distance 1 mile —

Mr A C Ardesahir s Jonathan (8st 4lbs) Reynolds 1
 H H The Maharaja of Mysore s Alcor (8st 11lb) T Hill 2
 H H The Maharaja of Rajppla s Pandora s Box (8st) W J Sibbritt 3
 Won by 1 length ½ length, ½ length Time—1 min 39 secs

The C N Wadia Gold Cup Distance 1 mile 1 furlong —

Mr Albert Habib s Acumen (9st), W J Sibbritt 1
 Mr Eve s Star of Italy (9st 7lbs) C Hoyt 2
 Mr G Fellowes Willow Stream (9st), Burn 3
 Won by 2 lengths 4 lengths Time—1 min 54 secs

The Willington Plate Distance 1 mile —

Mr D Habib's Sun Arch (8st 11lbs), Marable 1
 Mr A Lookmanja s Atreas (9st 8lbs) Burn 2
 Mr A S Tyebjee s Eastern Essex (8st 8lbs), S Black 3
 Won by 3 lengths, ½ length, 1½ lengths Time—1 min 37 secs

The Northumberland Handicap Distance 2 miles —

Mr Eve's Hoppy (8st 5lbs) J W Brace	1
H H The Maharaja of Rajpipla's Shipshape (9st 7lbs), W J Sibbritt	2
H H The Maharaja of Kolhapur's Cheerful Gift (8st 4lbs) Herbert	3
Won by short head short head, 2 lengths	
Time—3 mins 27 2/5 secs	

The Bombay City Plate Distance 1 1/2 miles —

Mr J Mein Austin's Tuberville (9st)	1
A. C Walker	2
Mr J Jenkins Gorbio (9st) H Hill	3
H H The Maharaja of Rajpipla's Concliator (8st) W J Sibbritt	4
Won by neck 2 lengths 1 1/2 lengths	
Time—2 mins 53 1/2 secs	

The Eclipse Stakes of India —

Mr Eve's Star of Italy (9st 4lbs), C Hoyt	1
Mr Albert Habib's Acumen (9st 7lbs) A C Walker	2
H H The Maharaja of Rajpipla's Shipshape (9st 4lbs) Howell	3
Won by 1/2 length 2 lengths 1 length	
Time—2 mins 42 5/8 secs	

The Doncaster Plate Distance 6 furlongs —

Messrs Habib Remail and A Begmalomed's Ballybrophy (8st 2lbs) White-side	1
Mr Kelso's Flourish (8st 5lbs) Harding	2
H H The Maharaja of Rajpipla's Flying Steve (7st 12lbs) W J Sibbritt	3
Won by head 3 lengths, 1 1/2 lengths	
Time—1 min 12 4/5 secs	

Calcutta

Chowringhee Hurdle Plate Distance 1 1/2 miles —

Mr A A E Copo's Red Connors (9st) Jackson	1
Messrs Mein Austin's Domestic Bond (11st 10lbs) Lortham	2
Messrs Gifford and McGee's Tycho (9st 6lbs), Elliott	3
Won by 1 length. Time—2 mins 46 secs	

March Plate (Div 1) Distance 7 furlongs —

Major J J Hilliard's Chequeringo (9st), J Brown	1
Balkut of Balkunatapur's Rockhoney (8st 10lbs) Rylands	2
Messrs Paul and Mitchell Innes' Tolworth (7st 12lbs), Marland	3
Won by a neck Time—1 min 28 secs	

Viceroy's Cup Distance 1 1/2 miles —

Mr Eve's Star of Italy (9st, 5lbs), C Hoyt	1
--	---

Mr W Rosenthal's Acumen (9st 5lbs), W Sibbritt	2
H H The Maharaja of Rajpipla's Highness (9st 5lbs) Easton	3
H H The Maharaja of Rajpipla's Shipshape (9st 5lbs) T Brown	4
Won by 1/2 length 2 1/2 lengths and short head	
Time—3 mins 2 1/2 secs	

Grand Annual Distance 2 miles —

Raja of Amargung's Destruction (9st 5lbs) Baker	1
Mrs A C Sanders' Philanthropy (11st) Goswell	2
Mr T C Galstaun's Dark Orient (10st 5lbs), Tegan	3
Mr A Carludern's Sapphire Stone (10st 15lbs) Hawkins	4
Won by 1 length 1 1/2 lengths 1 1/2 lengths	
Time—3 mins 30 1/2 secs	

Now Year Plate Distance 6 furlongs —

Mr H G (repon's) Louvarisen (8st 4 lbs) Marland	1
Mr Sujun K Chowdhury's Clauville (7st 6lbs) Meekings	2
Mr Pannick's Anturus (8st 5lbs) Brown	3
Won by 1/2 length short head 1 1/2 lengths	
Time—1 min 13 1/2 secs	

Ronaldshay Cup Distance 6 furlongs —

H H The Maharajah of Kolhapur's Star of India (9st) A C Walker	1
Miss M Prophit's Roman Emperor (9st) S Wragg	2
The Hon Mr R Cufadhur's Ganter (8st 7lbs) Marland	3
Won by 1/2 length 1 1/2 lengths neck	
Time—1 min 13 3/5 secs	

Gooch Behar Cup Distance 1 mile 3 furlongs —

Miss M Prophit's Royal Air Force (7st) S Wragg	1
Mr A E De Silva's Louvello (7st 12lbs) Hutchins	2
Mr Pannick's Dandaloo (7st 11lbs) J Brown	3
Won by neck, short head 1 1/2 lengths	
Time—2 mins 19 3/5 secs	

King Emperor's Cup Distance 1 mile —

Mr Eve's Star of Italy (9st 3 lbs) C Hoyt	1
Mr Shantidas Askuran's Welcome Gift (9st 5lbs) Scanlan	2
Mr V Rosenthal's Acumen (9st 5lbs) Sibbritt	3
Won by 1 1/2 lengths, head, 1 1/2 lengths	
Time—1 min 39 3/5 secs	

Governor's Cup Distance 1½ miles.—

Mr Pannick's Dandaloo (7st 12lbs), J Brown

Miss M Prophit's Royal Air Force (7st 7lbs), S Wragg

Commissioner in the Punjab, 1908 Under Secretary to the Punjab Government 1913 Under Secretary Home Department Government of India 1916-19, Military Department India Office, 1919-20, Deputy Commissioner of Delhi Address Delhi and Simla

The Calendars.

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The Jewish Calendar is in accordance with the system arranged A.D. 358. The Calendar dates from the Creation, which is fixed as 3,760 years and 3 months before the beginning of the Christian Era, the year is Luni-solar.

The Mohammedan, or era of the Hejira, dates from the day after Mahomet's flight from Mecca, which occurred on the night of July 15 622 A.D. The months are Lunar.

The Peshi year was derived from a combination of the Hejira and Samvat years by the order of Akbar, it is Luni-solar. The Bengali year seems also to have been related at one time to the Hejira, but the fact of its being Solar made it lose 11 days each year.

The Samvat era dates from 57 B.C., and is Luni-solar. The months are divided into two fortnights—*sudhi*, or bright, and *krishna*, or dark. Each fortnight contains 15 tithis, which furnish the dates of the civil days given in our calendars.

PUBLIC HOLIDAYS IN 1931

Parsee (Shchensshahi)			Hindu		
Jamshedji Naoroj	March	21	Makar Sankranti	January	14

BABU PICHE LAL IN EUROPE.

By THE AUTHOR OF "WARLIKE SNIPS AND SNAPS."

Few writers have succeeded so well in caricaturing without offence the idiosyncrasies and inconsistencies of the average Indian. Babu Piche Lal is one of the most humorously delightful figures in modern fiction. Europeans and Indians alike will find his eccentricities most entertaining.

Price Rs. 2. By V P P Rs. 2-6-0

COGITATA ET VISA

Price Rs. 2. By V P P. Rs. 2-4-0.

Each book contains an unusually good collection of poems possessing a delightful charm, some of which will very much appeal to students. A series worth possessing.

CRICKET AND HOW TO PLAY IT.

By E. H. D. SEWELL, M.C.C.

A book of instruction on India's King of Games, written in an interesting style by the man who taught Jack Hobbs (the world's greatest batsman) to bat. Will be found equally interesting to beginner and accomplished player.

Cricketers and would-be cricketers read this book and acquire knowledge from one of the most successful coaches of this great game.

By E J. BUCK, C.B.E

A fascinating history of Simla copiously illustrated and
bristling with anecdotes A valuable book of absorbing interest

Price Rs. 15-0 - - - By V.P.P Rs. 16-0.

RACKETS IN INDIA.

By COLONEL A R WINSLOE

Press Opinion

"Colonel Winsloe is well-known as a player and as an enthusiast, wherever rackets is played in India In "Rackets in India" he gives a short history of the game in India, notes on the tournaments and Indian Markers and the results of championships and tournaments from their inception in different parts of India Most important are the chapters devoted to racket balls, rackets and courts, their preservation and the way to look after them The greatest enemy of the game of rackets is its cost, and Colonel Winsloe gives most practical advice how the price of playing the game may be kept down The map showing places with racket courts is interesting and, to rackets players visiting or resident in India, of extreme importance The book is dedicated to Major-General S H Sheppard, C.B., C.M.G., D.S.O., who has written a foreword to it "

— 'The London Times Literary Supplement "

MURAL PAINTINGS OF THE BOMBAY SCHOOL

By

W E GLADSTONE SOLOMON, I.E.S.

(Director, Sir J. J. School of Art, Bombay)

An exceptionally beautiful production, containing descriptive narratives of the School's work up to the completion of the Mural Paintings commissioned for New Delhi by the Government of India which gave opportunity for the publication of this excellent work

Thirty full page illustrations some of which are in full colour reproductions of the original Mural Paintings prepared by the Bombay School of Art, which form part of the beautiful decorations of New Delhi

Brief studies of Indian decorative influences in the past which give a slight sketch of their effect to-day in Bombay and the following articles "The Moghul Message of Beauty," "The Indian Art Renaissance," "Drawing the Rangoli at Diwali," and "Scenes at a Hindu Wedding in Bombay"

A MAGNIFICENT BOOK.

Price Rs. 10.

By V. P. P. Rs. 10-8.
